ST. EDMUND'S SECONDARY SCHOOL

INFORMATION AND COMMUNICATION TECHNOLOGY (ICT)

PRODUCTIVITY TOOL
PRESENTATIONS

FORM 2

HAKUBEZA CLETUS (Mr.)

Overview

In this topic, you will be introduced to presentations and how they are created using presentation software such as Microsoft PowerPoint.

You will develop basic skills in creating and organizing slides, editing slide content, and improving presentations using animations and transitions.

You will also learn how to insert multimedia elements such as pictures, videos, charts, and audio to make presentations more attractive and informative. The topic will help you develop creativity, communication, and digital skills that can be used in school projects, meetings, and everyday life.

Introduction

Have you ever seen your teacher use slides with pictures, videos, and moving text during a lesson? Those slides are called a presentation. **A presentation is a way of sharing information using slides on a computer.**

In this lesson, you will learn how to create simple presentations, add and arrange slides, use animations and transitions, and insert pictures, videos, and charts to make their work interesting and easy to understand.

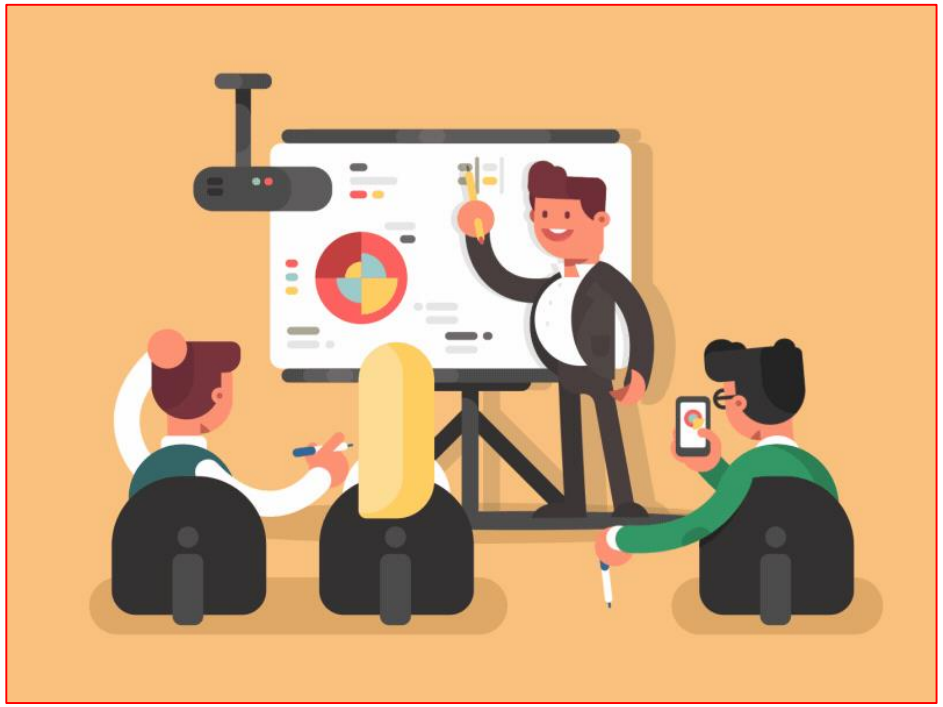

What is a presentation program?

- A presentation is a collection of slides used to share information with an audience using text, pictures, charts, audio, and videos.
- Presentation software helps users create attractive and organized slides for teaching, meetings, reports, and demonstrations.
- Examples of presentation software include:
  - Microsoft PowerPoint
  - Google Slides

- **Presentation software** is a computer program you use to organize and present information to others. Whether you are explaining a new product or moderating a meeting, presentation software can help you effectively communicate your ideas.
- You can use PowerPoint to create presentations, as well as speaker notes for the presenter and handouts for the audience.

Presentation principles

When you want to create a presentation , you have to plan it carefully. An effective presentation gets the message across to the audience without boring them or confusing them.
There are some basic principles you can follow to make your presentation effective.

Planning an Effective Presentation

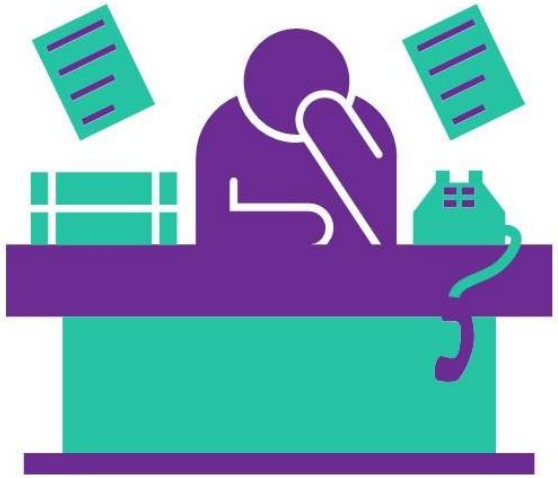

- Before you create a presentation, you need to have a general idea of the information you want to communicate.
- PowerPoint is a powerful and flexible program that gives you the ability to start a presentation simply by entering the text of your message. If you have a specific design or theme you want to use, you can start the presentation by working on the design. In most cases you'll probably enter the text of your presentation into PowerPoint first and then tailor the design to the message and audience.
- When preparing your presentation, you need to keep in mind not only who you are giving it to, but also where you are giving it. It is important to know what equipment you will need, such as a sound system, computer, or projector.

Safety and Care When Creating Presentations

You should:

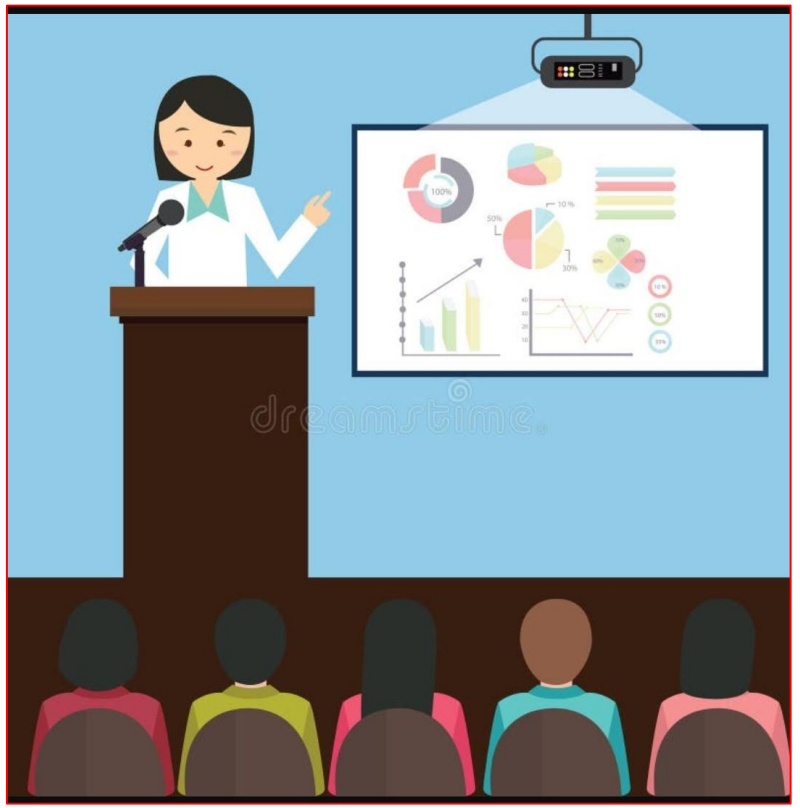

- Save work regularly
- Use appropriate pictures and videos
- Avoid overcrowding slides with text
- Use readable font sizes and colours
- Respect copyright when using media files

Uses of Presentations

Presentations are used to:

- Teach lessons in class
- Present business ideas
- Share research findings
- Display sales reports and projects
- Advertise products and services
- Conduct meetings and workshops
- Photo Albums
- Training & workshop sessions

10 Golden rules for using PowerPoint

1. Keep the presentation simple and short.

2. Make sure the flow of information is logical.

3. Use bullet points rather than paragraphs of text. Have no more than four bullet points on each slide.

4. Use a font that is easy to read from a distance.

5. Use pictures to illustrate what you are saying. Do not use pictures only as decorations.

6. Keep the background colors and fonts the same throughout your presentation.

7. When you have finished creating your presentation, ask a friend or family member to be your audience. Listen to their comments and make changes as needed.

8. Font size

9. Not too many slides

10. Limit animations and slide transitions

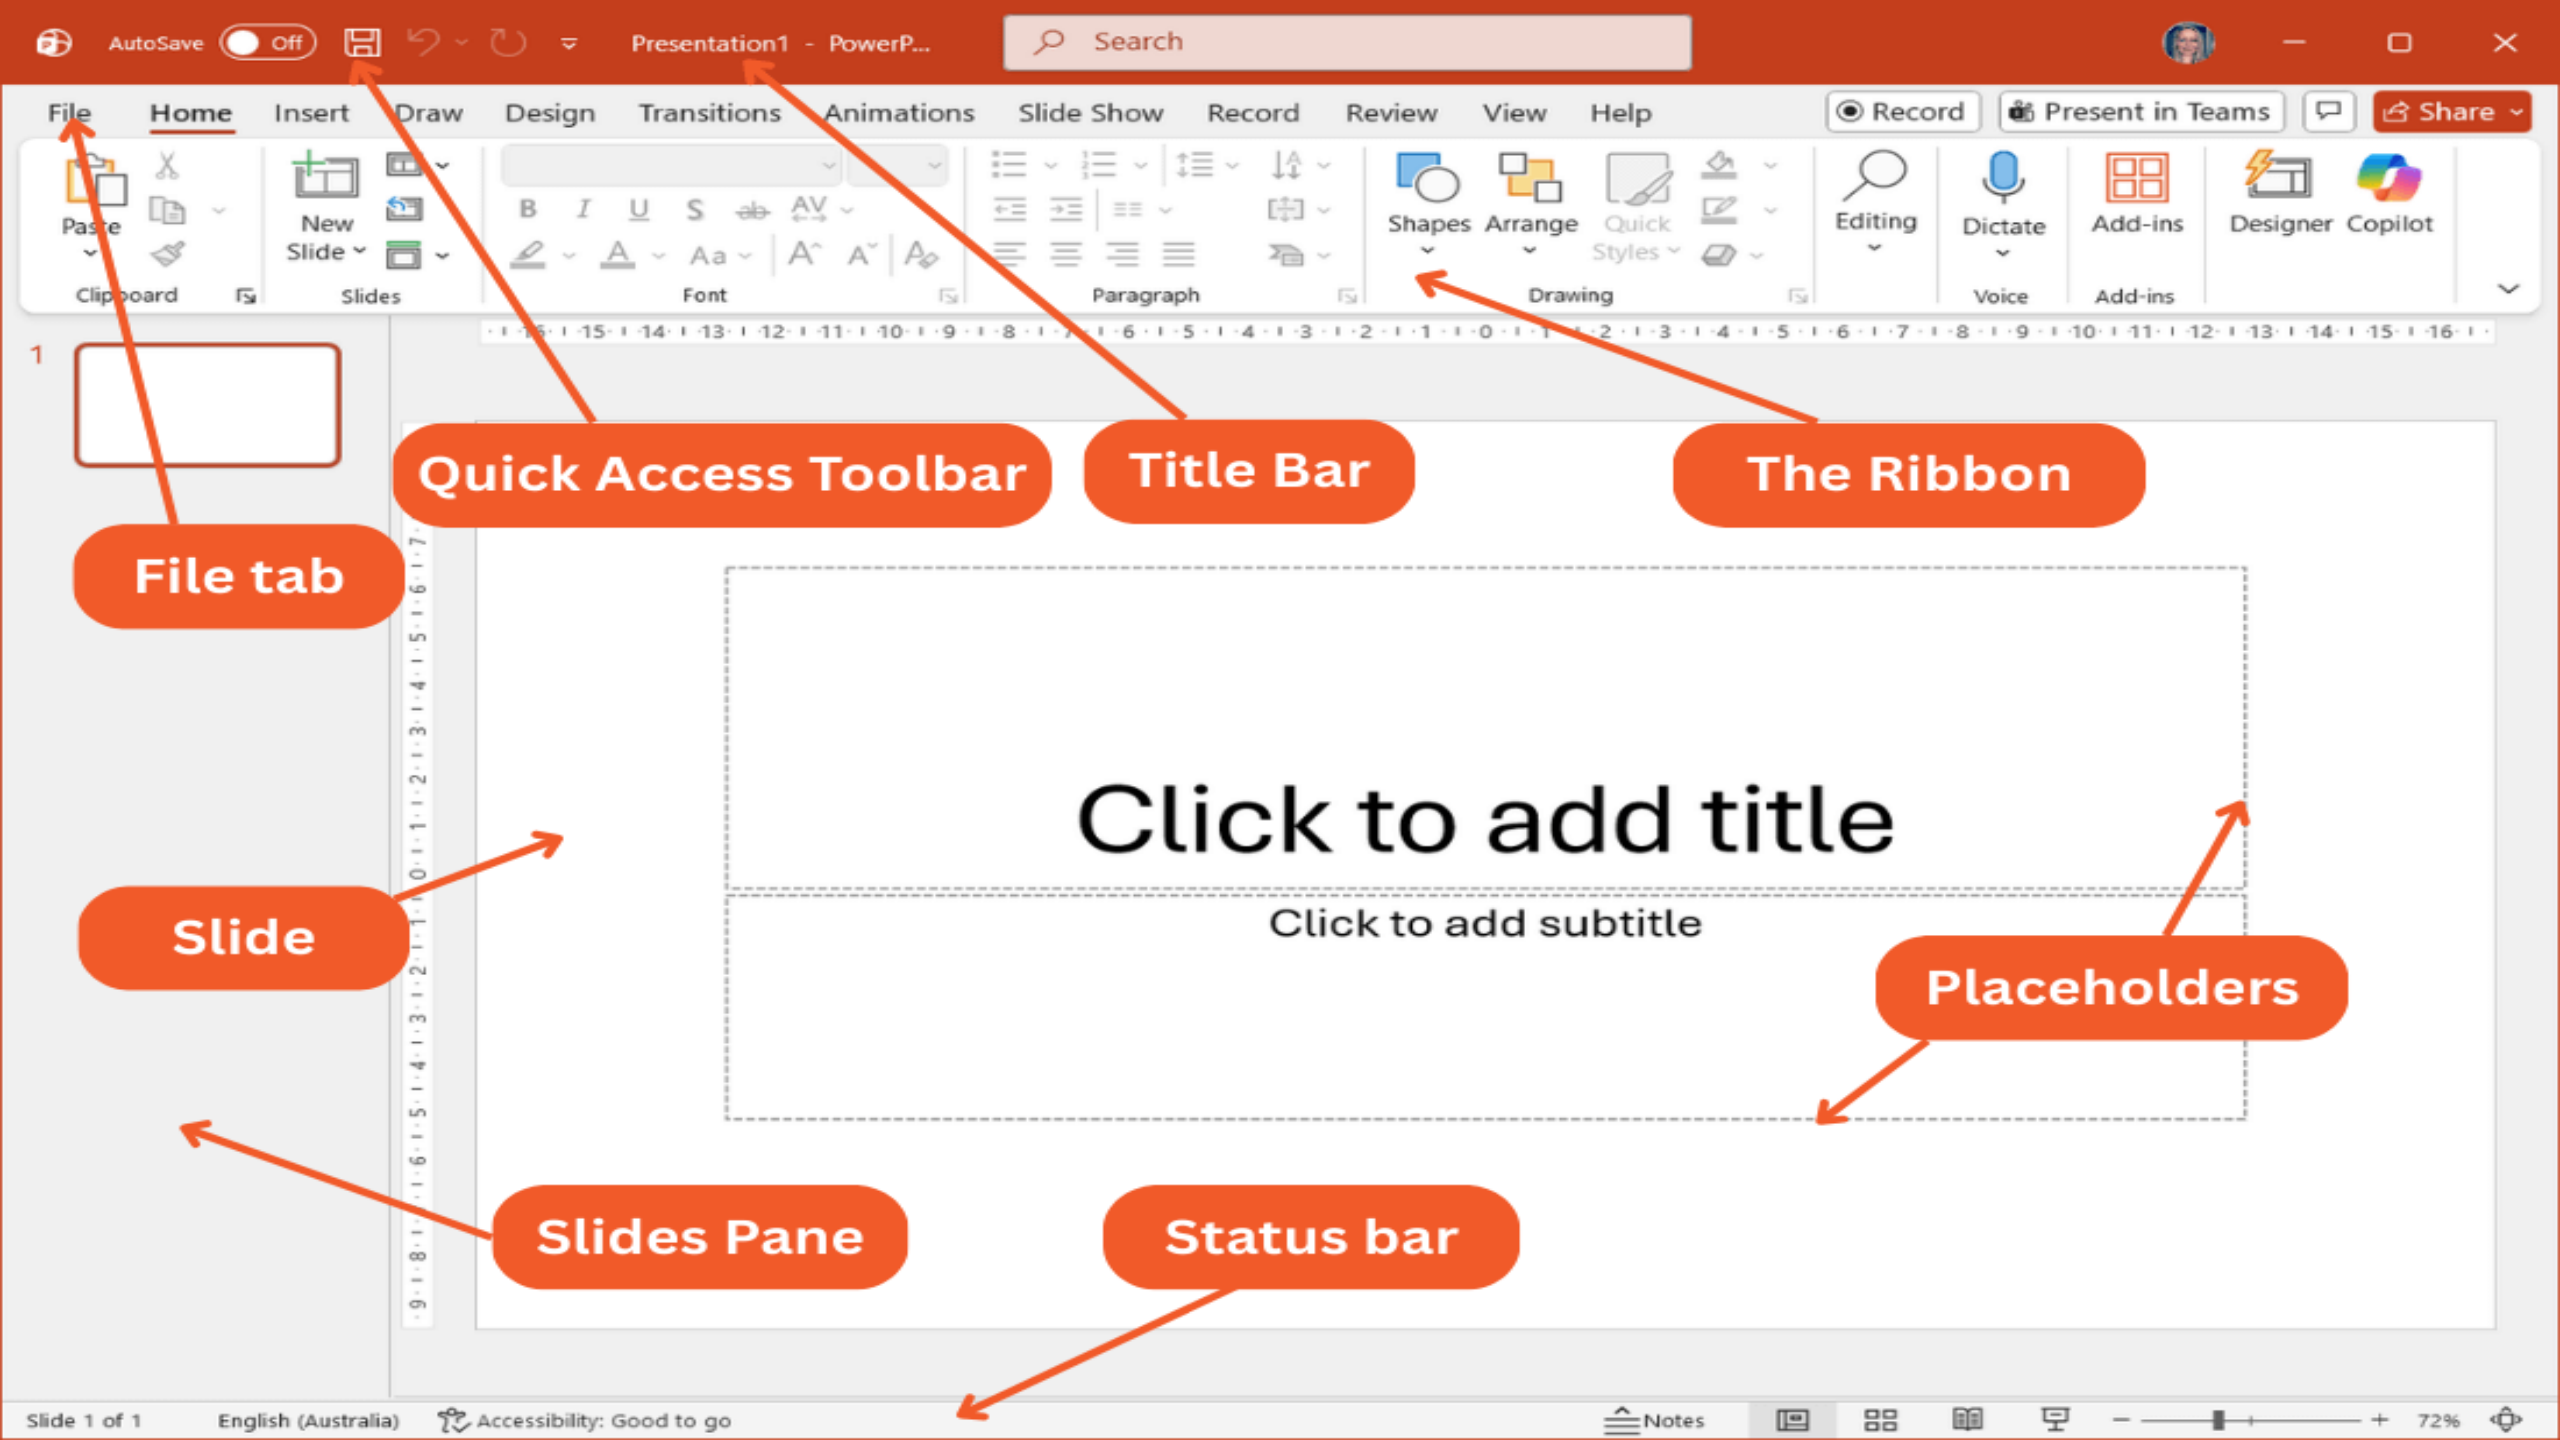

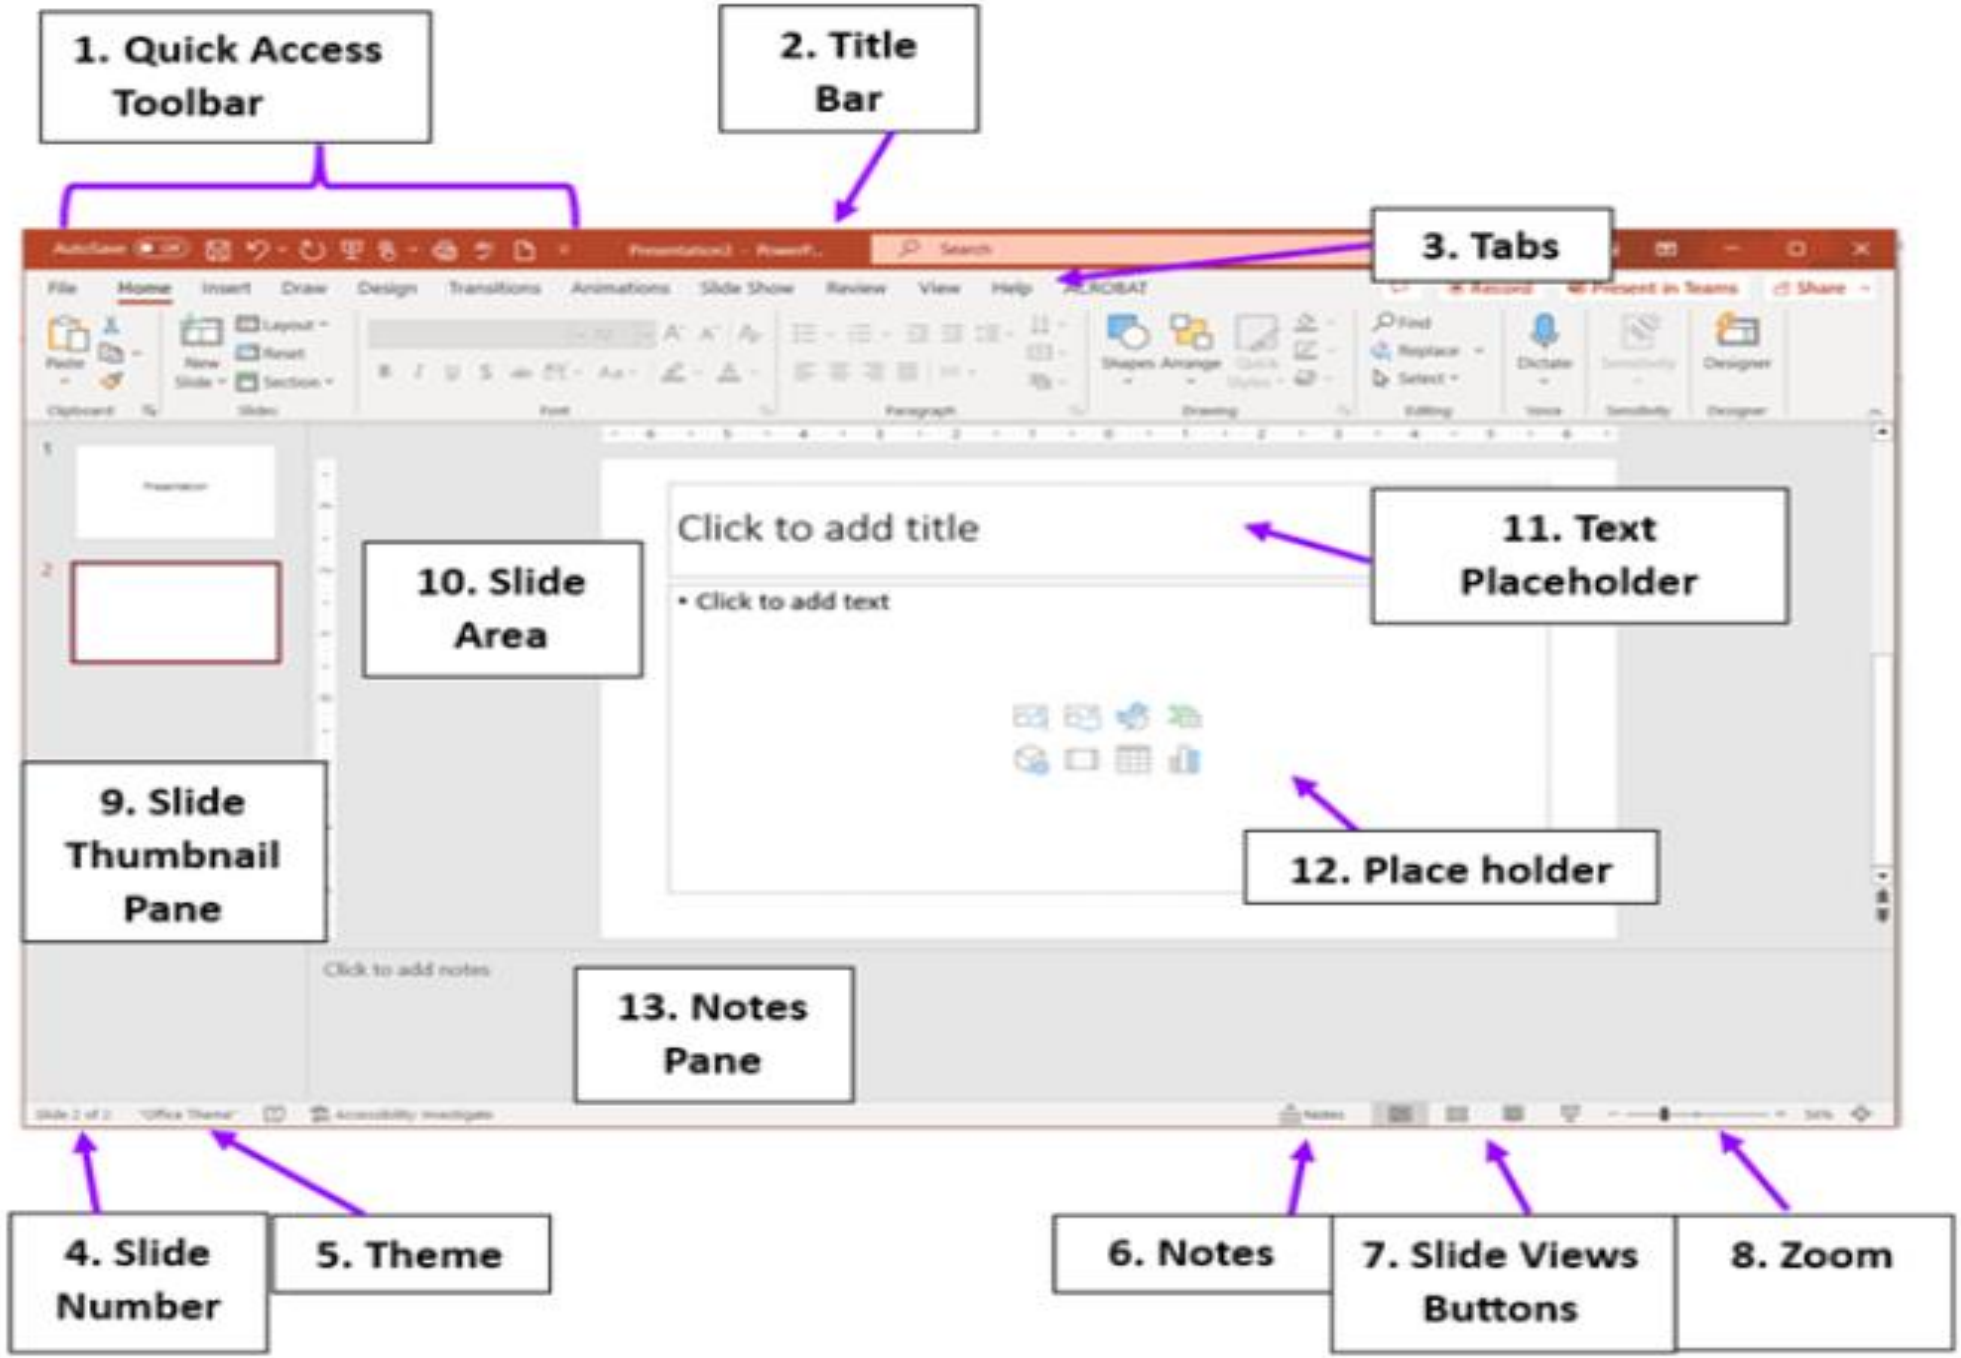

Features of a Presentation Window

Common features found in presentation software include:

- **Title Bar** – Displays the name of the application and the file currently in use.
- **Ribbon** – Displays the numerous functions and tools available to work with your presentation.
- **Slides Pane** – shows all slides in the presentation
- **Slide** - The area which will be displayed as full screen when viewed in Slide Show mode.
- **Workspace/Place holders** – area used to create and edit slides
- **Status Bar** – shows slide number and other details

PowerPoint Presentation Window

- When you first start PowerPoint, a blank slide appears in the PowerPoint window.
- PowerPoint has different views that allow you to see your presentation in different forms. By default, the PowerPoint window opens in Normal view, which is the primary view that you use to write, edit, and design your presentation.
- Normal view is divided into three areas called panes: the pane on the left contains the Outline and Slides sorter, the large pane is the Slide pane, and the small pane below the Slide pane is the Notes pane. You move around in each pane using the scroll "STEPS bars.

Ribbons

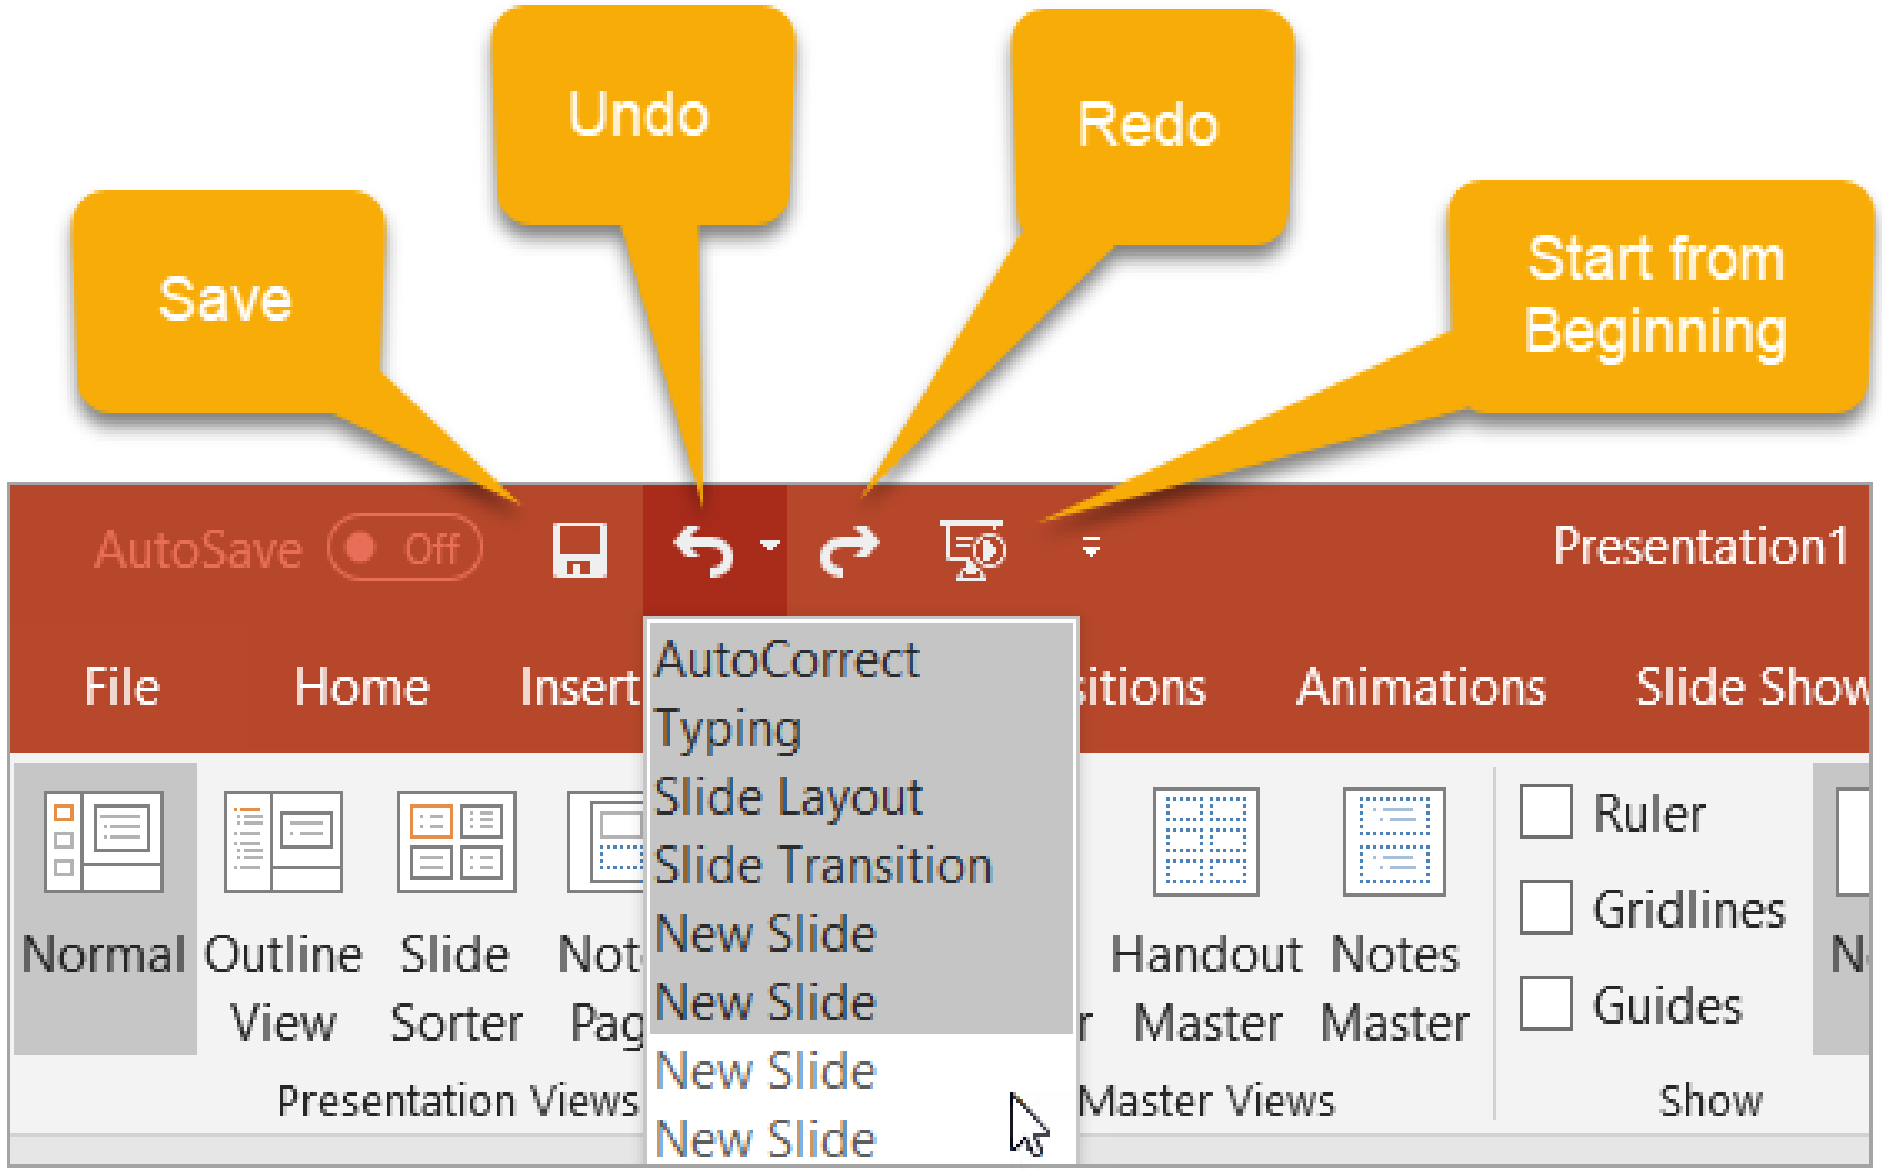

Ribbons in Presentation are group of related user interface commands, sectioned into tabs which are used for editing, organization and formatting of presentations.

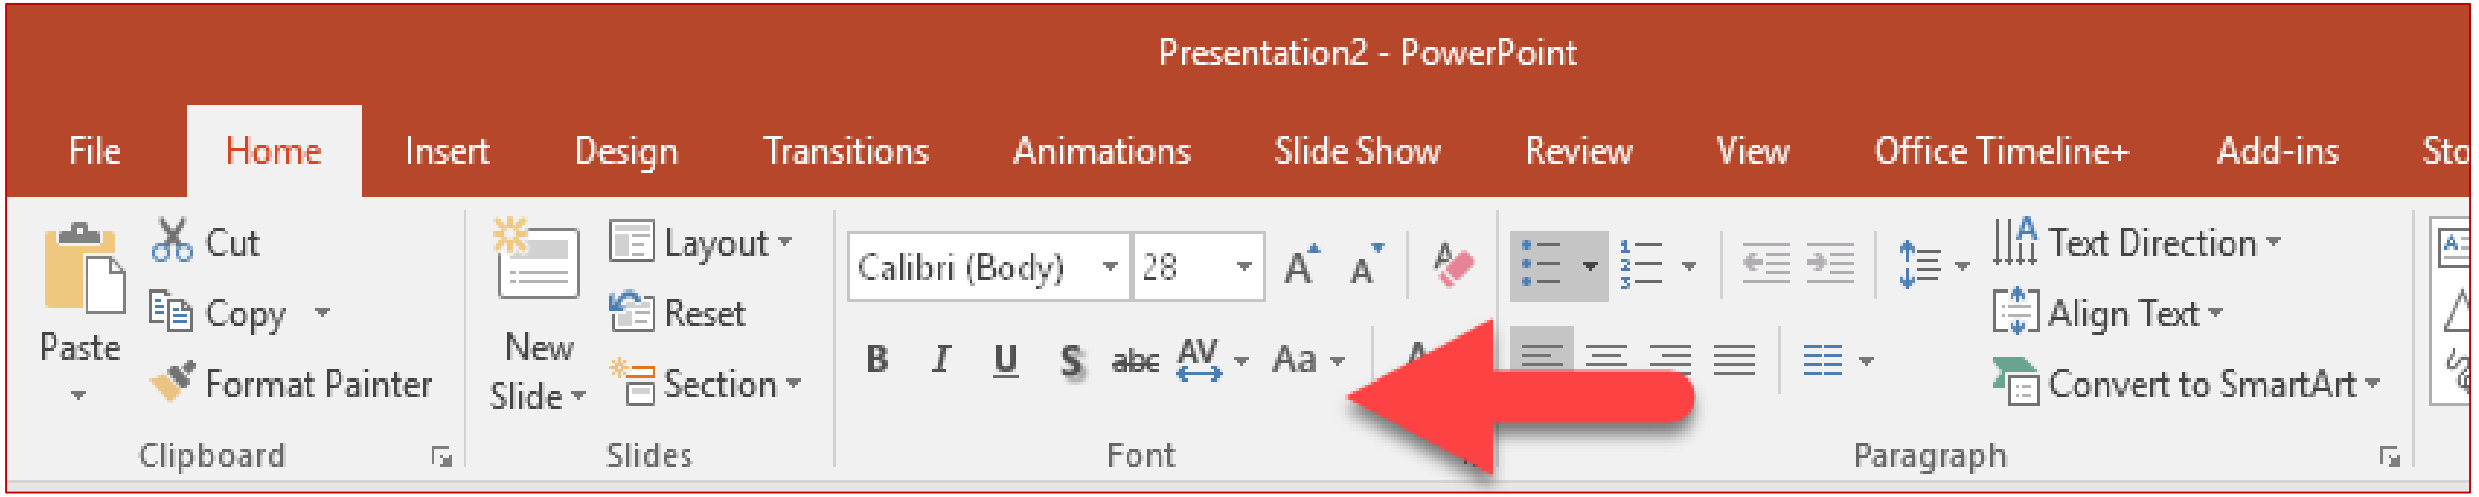

The Quick Access toolbar

- The Quick Access toolbar provides access to common commands such as Save, Undo, and Redo.
- The Quick Access toolbar is always visible no matter which Ribbon tab you select.

Show

- **The Ribbon** is a wide (toolbar-like) band that runs across the entire PowerPoint window that organizes all of PowerPoint's primary commands.
- Each set of primary commands is identified by a **tab**; for example, the **Home tab** is selected by default, as shown below.
- Commands are further arranged into **groups** on the Ribbon based on their function. So, for example, **text formatting** commands such as Bold, Underline, and Italic are located on the Home tab, in the **Font group**.

Presentation Views

- PowerPoint has six different views for the user. Some of the views are available on the View tab and the Status bar, while others are only in one location. Some views are more limiting than others, in terms of editing the presentation.

The views available on the View Tab – Presentation Views Group.

The views available on the Status bar. (From left to right: Normal View, Slide Sorter View, Reading View, and Slide Show View)

The Status Bar

- The status bar, located at the bottom of the PowerPoint window, shows messages about what you are doing and seeing in PowerPoint, including which slide you are viewing, and the design theme applied to the presentation. In addition, the status bar displays the Zoom slider controls, the Fit slide to current window button, and information on other functionality such as signatures and permissions.

Task: Match each term with the statement that best describes it.

- Reading view
- Notes pane
- Slide Show view
- Slide Layout
- Ribbon
- Zoom slider

a. A view that displays a presentation over an entire computer screen and that is used to show to an audience

b. Allows you to change the size of the slide in the window

c. A view that is used to review a presentation or to show someone a presentation directly on a computer screen

d. Arranges placeholders in a specific way on the slide Used to type text that references slide content

f. Used to organize all of the commands in PowerPoint

Activity 1: The Presentation Window
School Assembly Announcement

Scenario

Your school has asked you to prepare a PowerPoint presentation to announce the upcoming Sports Day. Before creating the slides, you need to understand the different parts of the Presentation window.

Activity

Open Microsoft PowerPoint and identify the following parts:

- Title Bar
- Quick Access Toolbar
- Ribbon
- Slide Pane
- Slide Area
- Status Bar

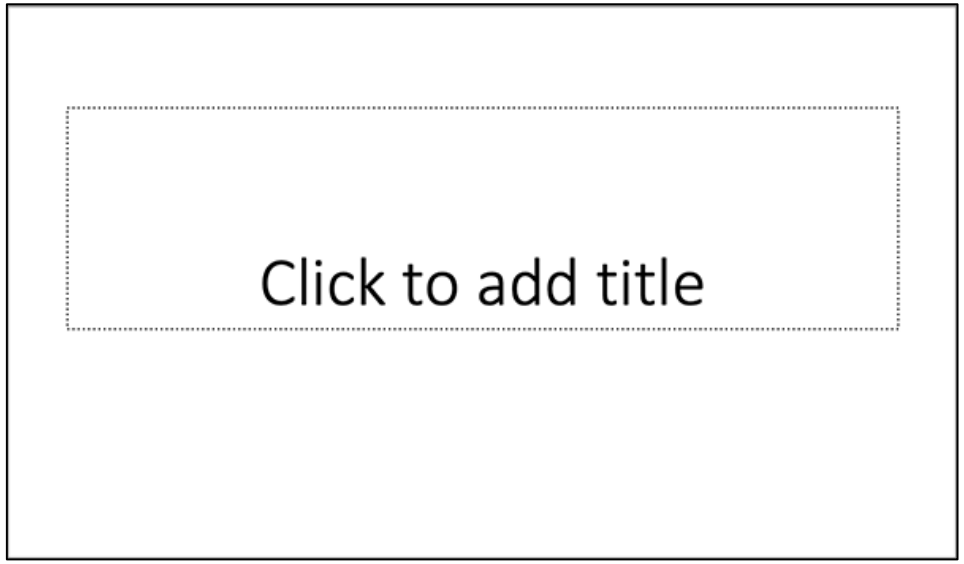

Questions [14 Marks]

1. What is the function of the Ribbon in PowerPoint? [1]
2. Which part displays miniature versions of all slides? [1]
3. Which part shows the name of the presentation file? [1]
4. Why is it important to understand the PowerPoint window before creating a presentation? [1]
5. Mention any 3 Golden rules for using PowerPoint [3]
6. State 3 uses of presentations in daily life. [2]
7. Explain 2 safety measures you should consider when creating presentations. [4]

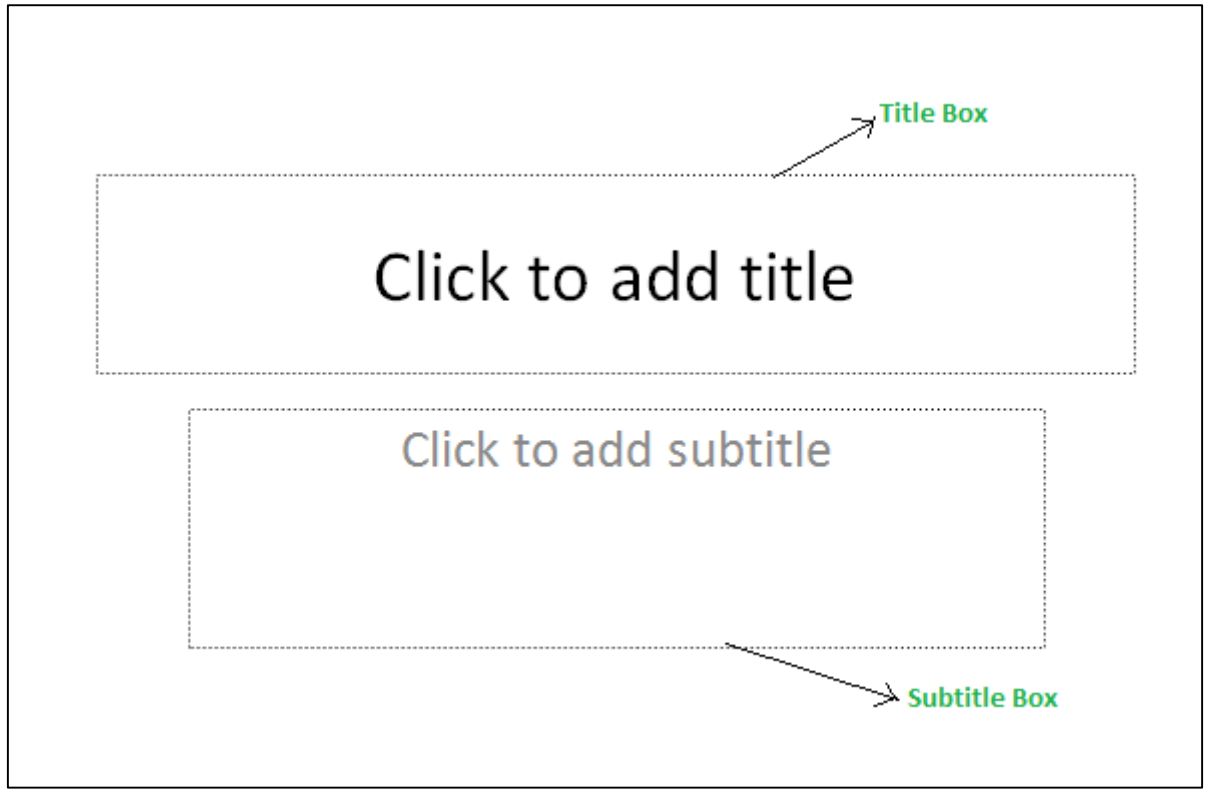

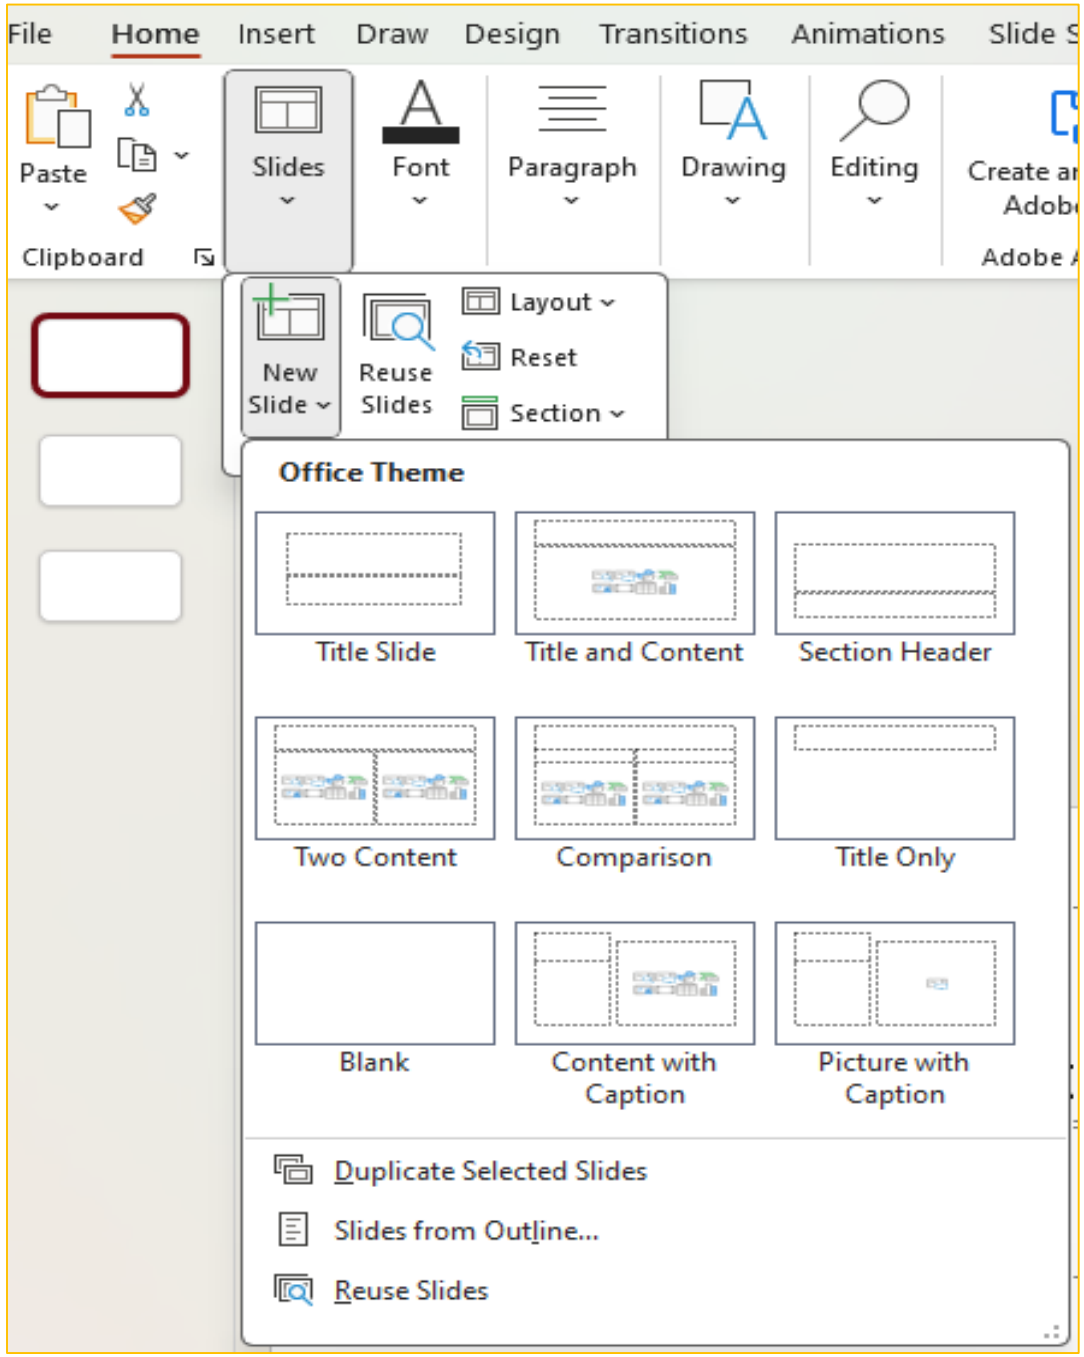

2.2.3.1. Creating Presentations

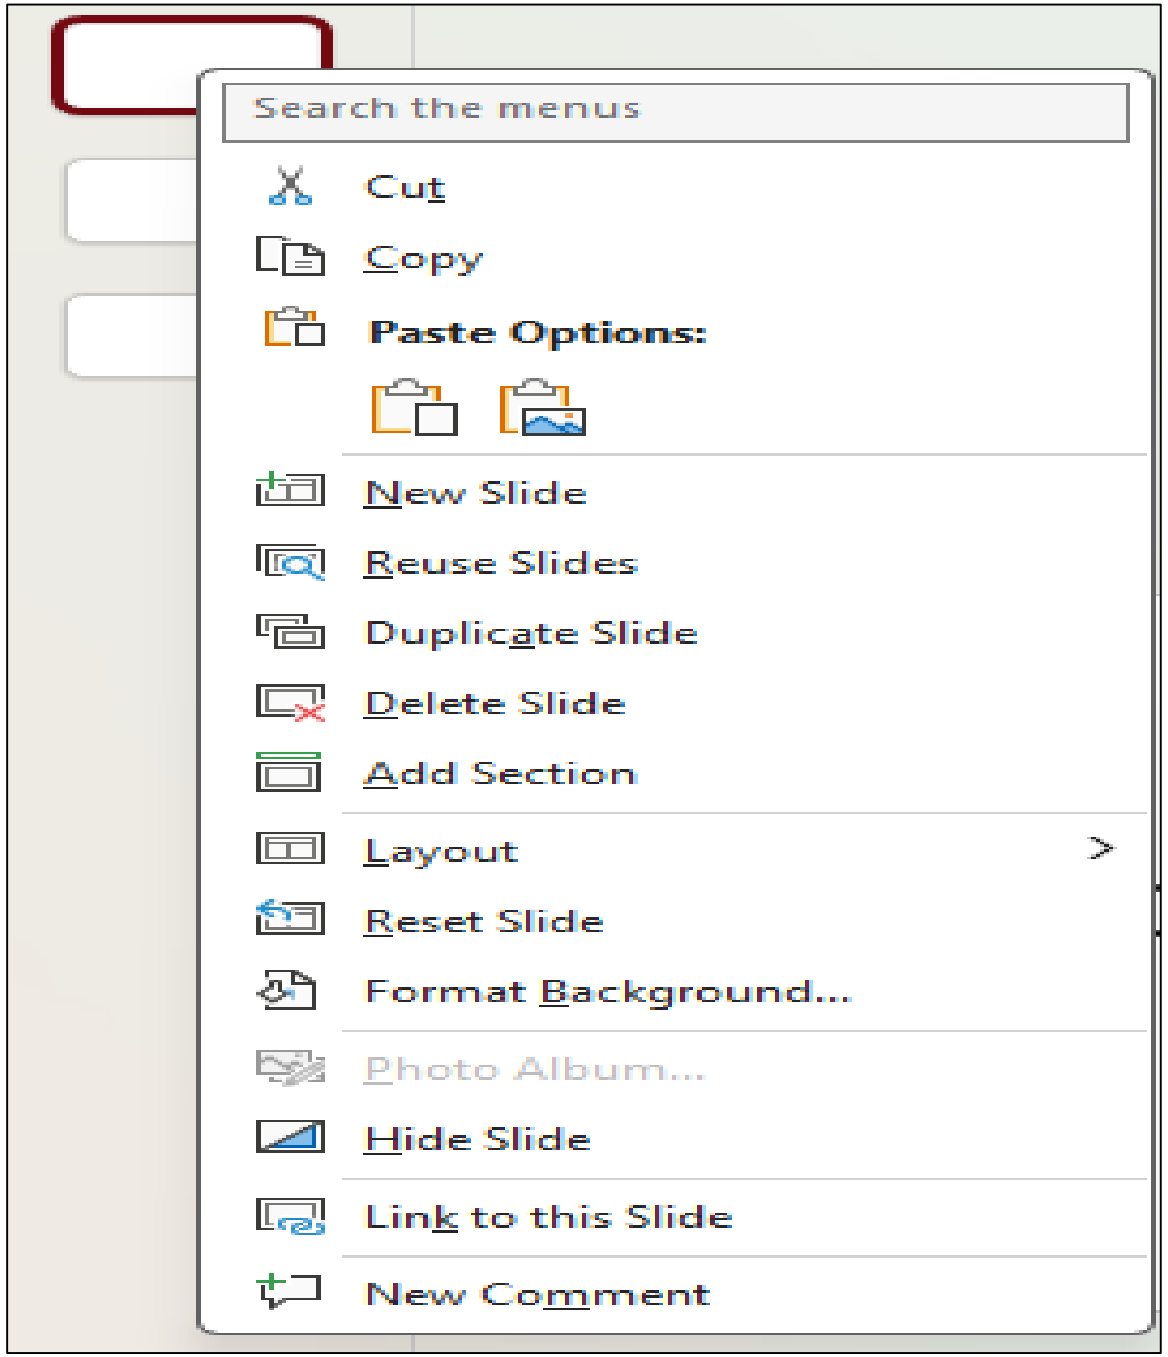

- Each time you start PowerPoint, a new presentation with a blank title slide appears in Normal view. The title slide has two text placeholders—boxes with dotted borders—where you enter text. The top text place-holder on the title slide is the title placeholder, labeled "**Click to add title**."

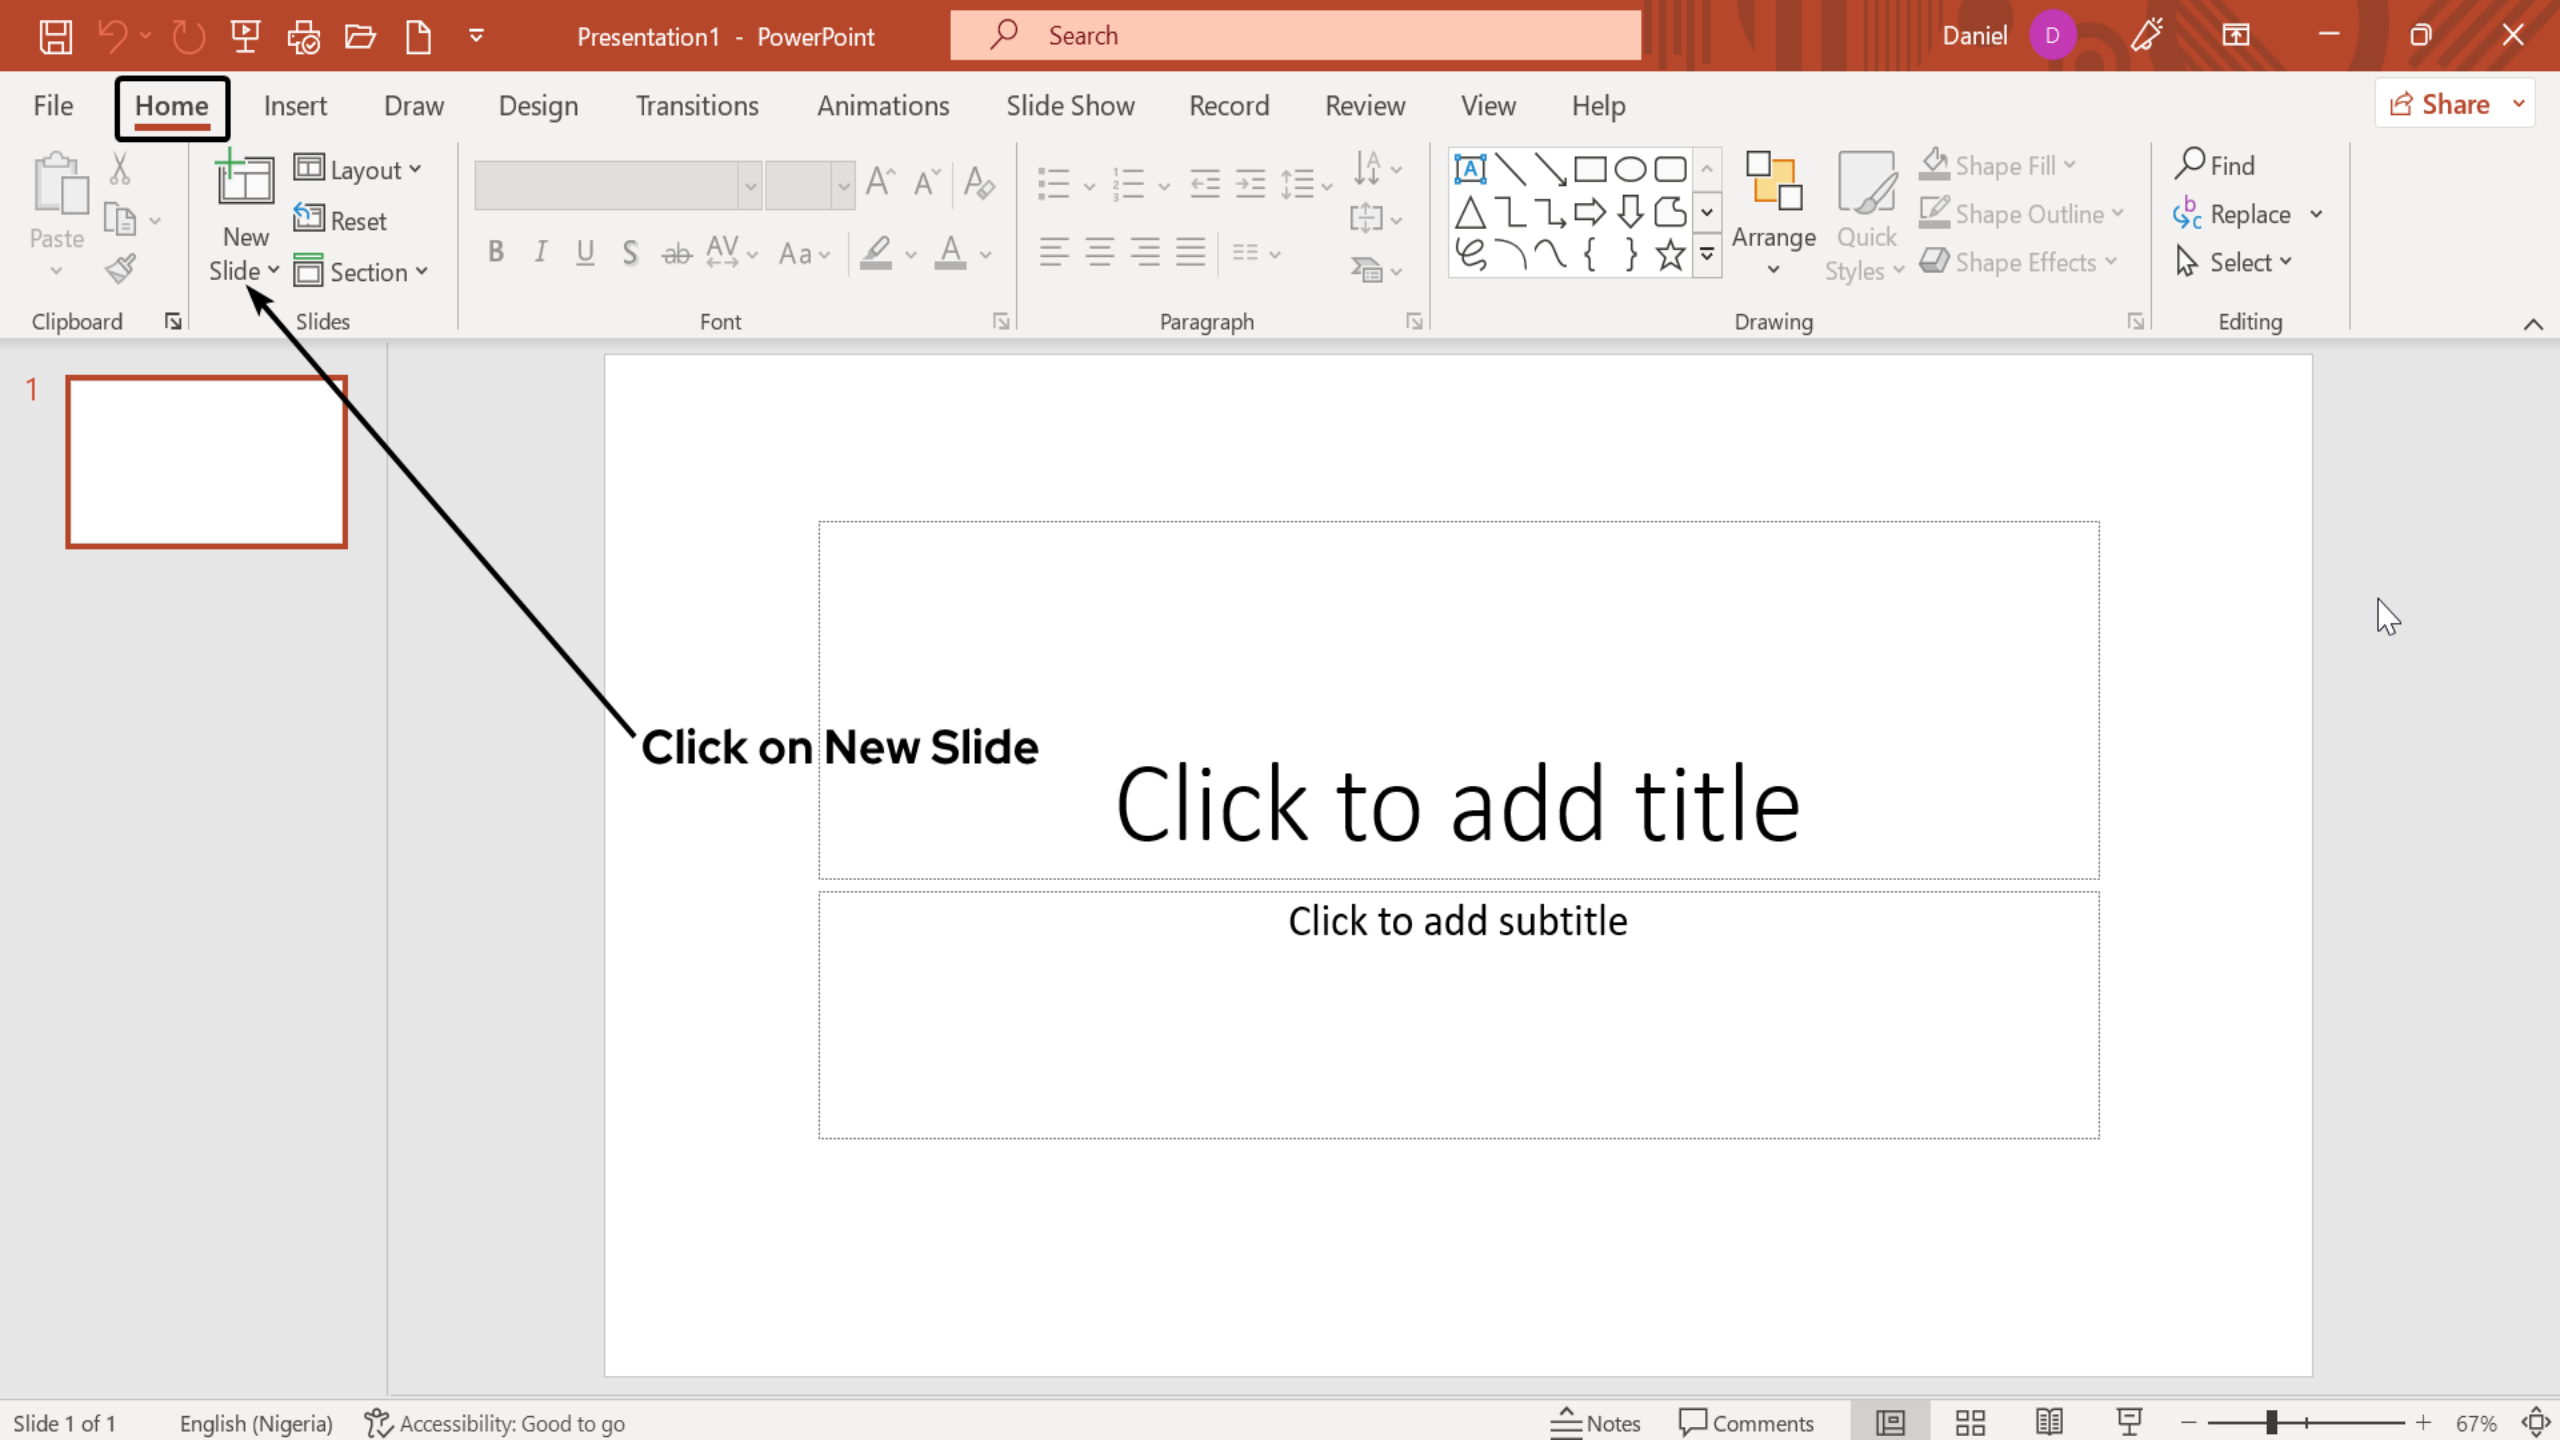

- The bottom text placeholder on the title slide is the subtitle text placeholder, labeled "**Click to add subtitle**." To enter text in a place-holder, click the placeholder and then type your text.
- After you enter text in a placeholder, the placeholder becomes a text object. An object is any item on a slide that can be modified.
- Objects are the building blocks that make up a presentation.

Saving a File

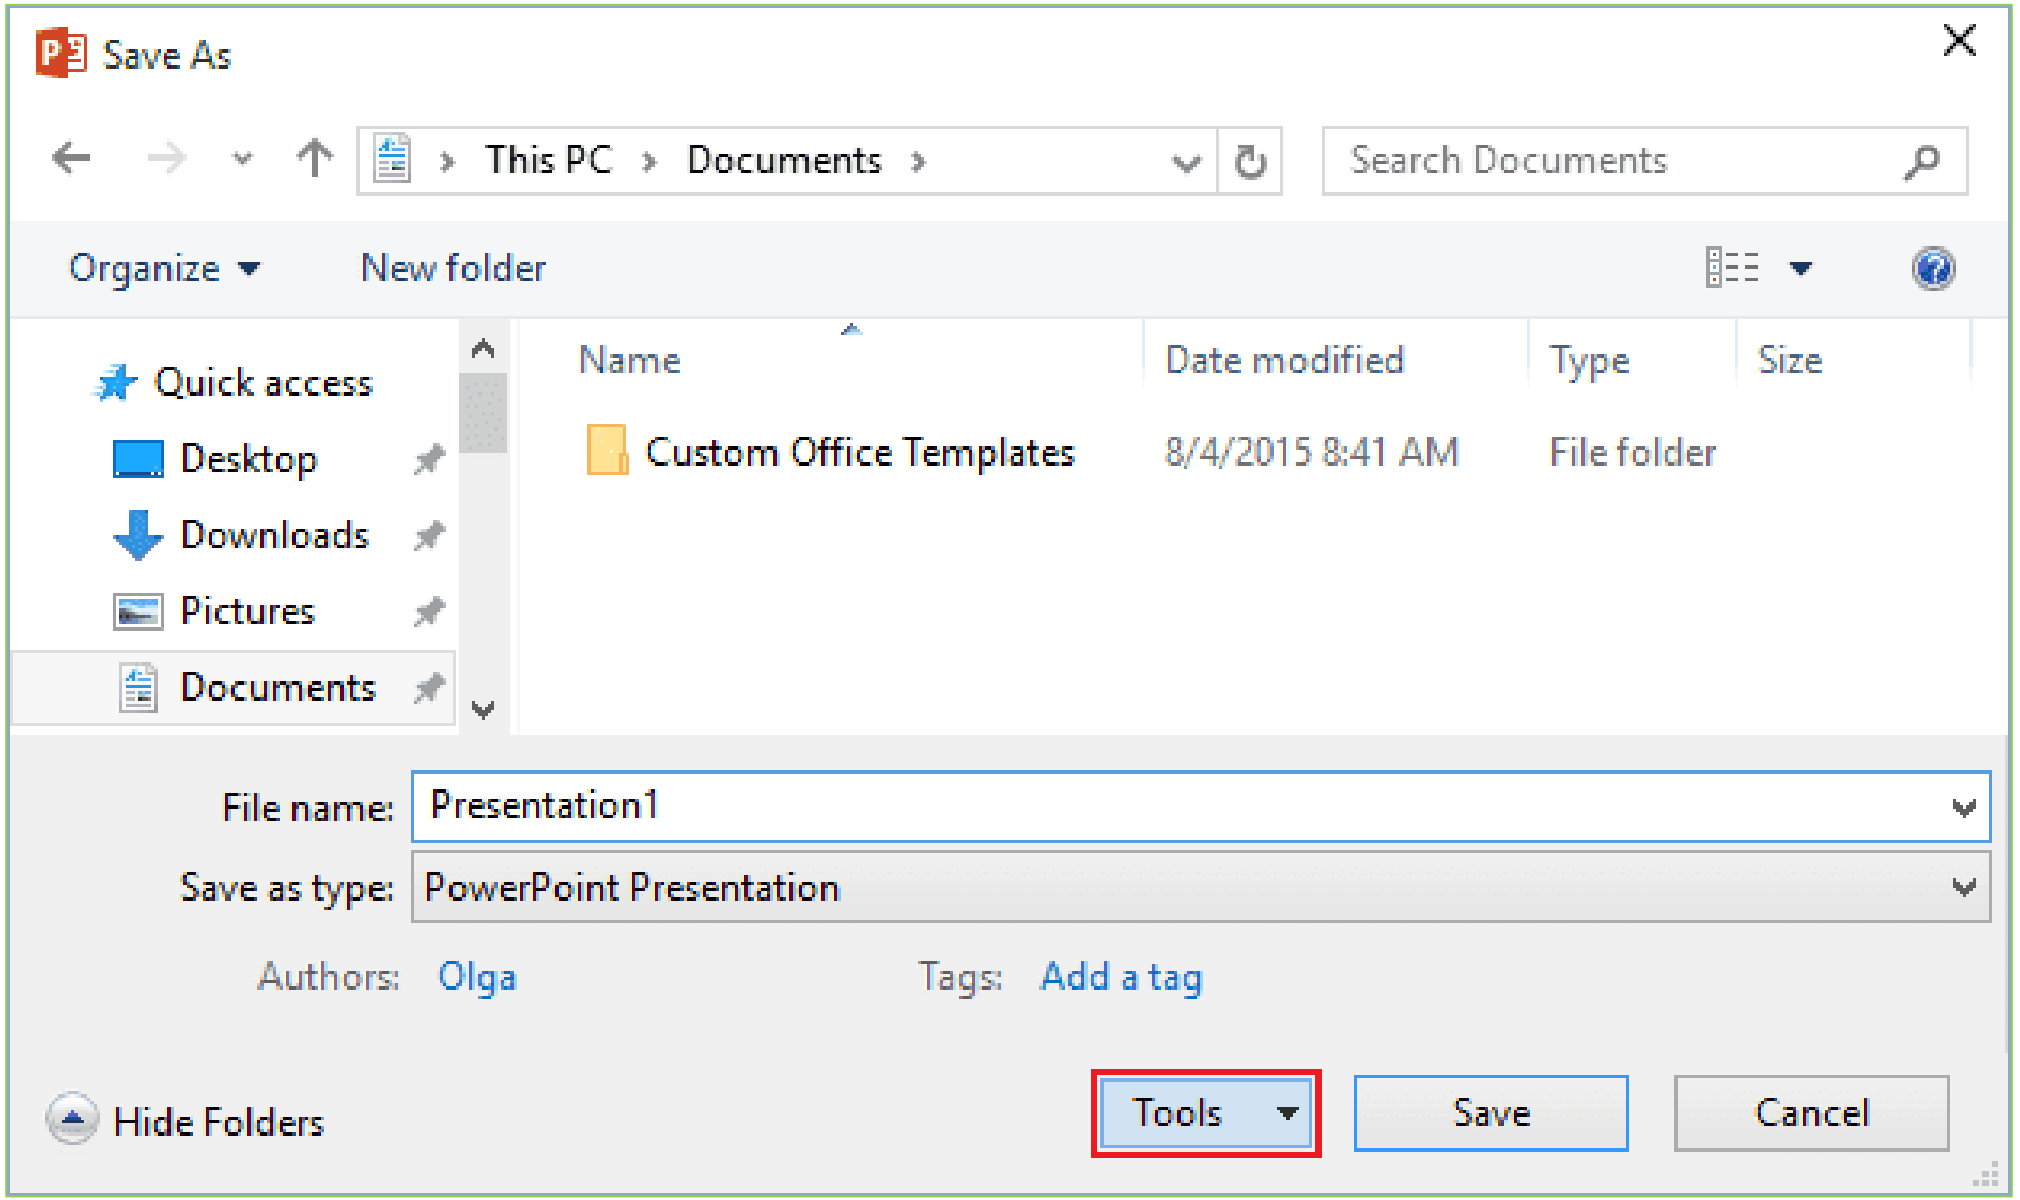

When working in a program, one of the first things you need to do is to save a file. A file is a stored collection of data. Saving a file enables you to work on a project now, then put it away and work on it again later.

In some Office programs, including Word, Excel, and PowerPoint, a new file is automatically created when you start the program, so all you have to do is enter some data and save it.

Activity 2: Saving a Presentation Protecting Your Work

Scenario

Cletus spent one hour creating a presentation on "Environmental Conservation." Suddenly, there was a power outage before he saved his work.

Discussion Questions

1. What mistake did Cletus make?
2. What could happen if work is not saved regularly?
3. How can learners avoid losing their work?

Practical Activity

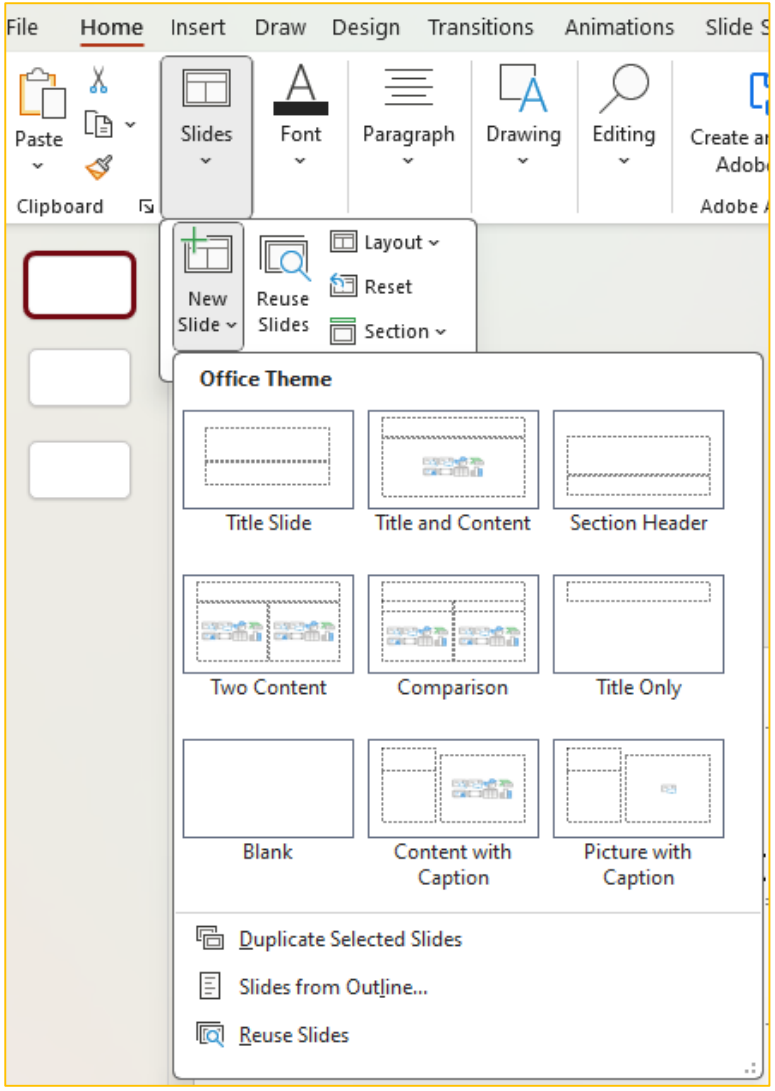

Create a presentation titled "**My Favorite Hobby**" and:

1. Insert a title slide.
2. Save the presentation in a folder named **ICT Form 2** which you should create on a desktop.
3. Save the file using your name.
4. Explain why is saving a presentation important?

Creating a Presentation

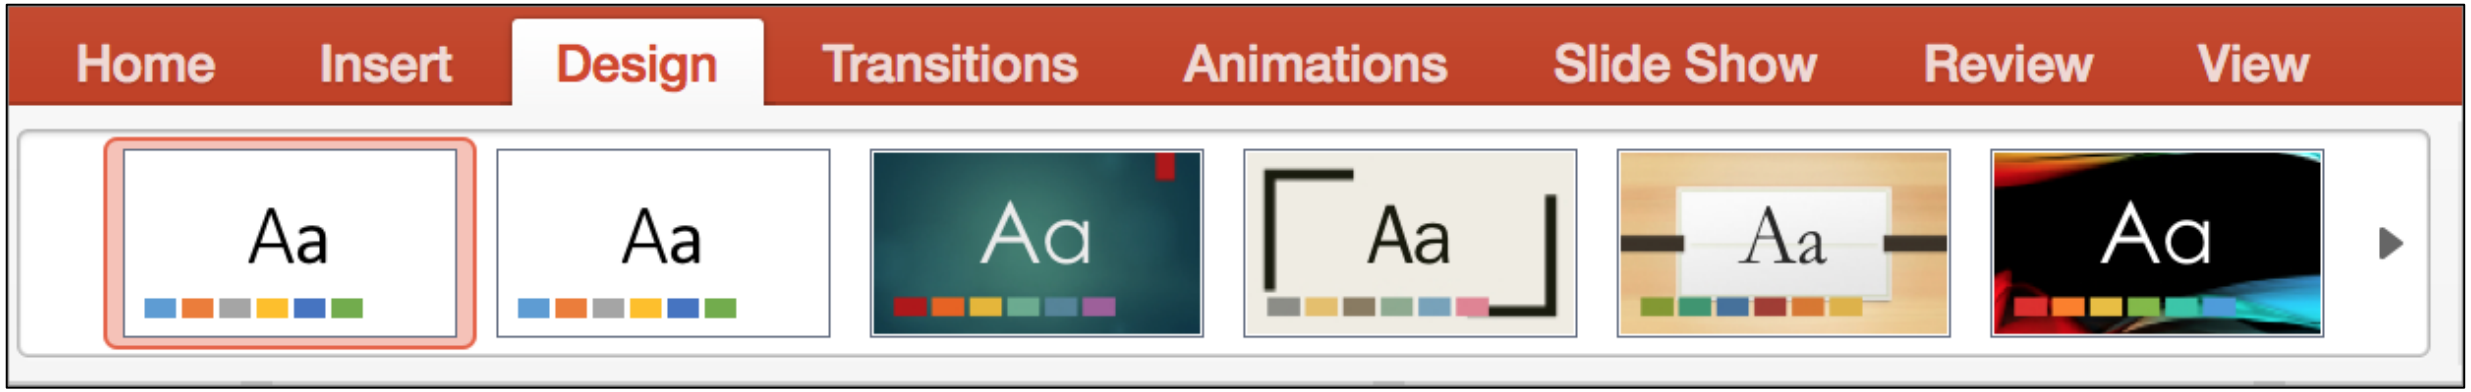

Steps for Creating a Presentation

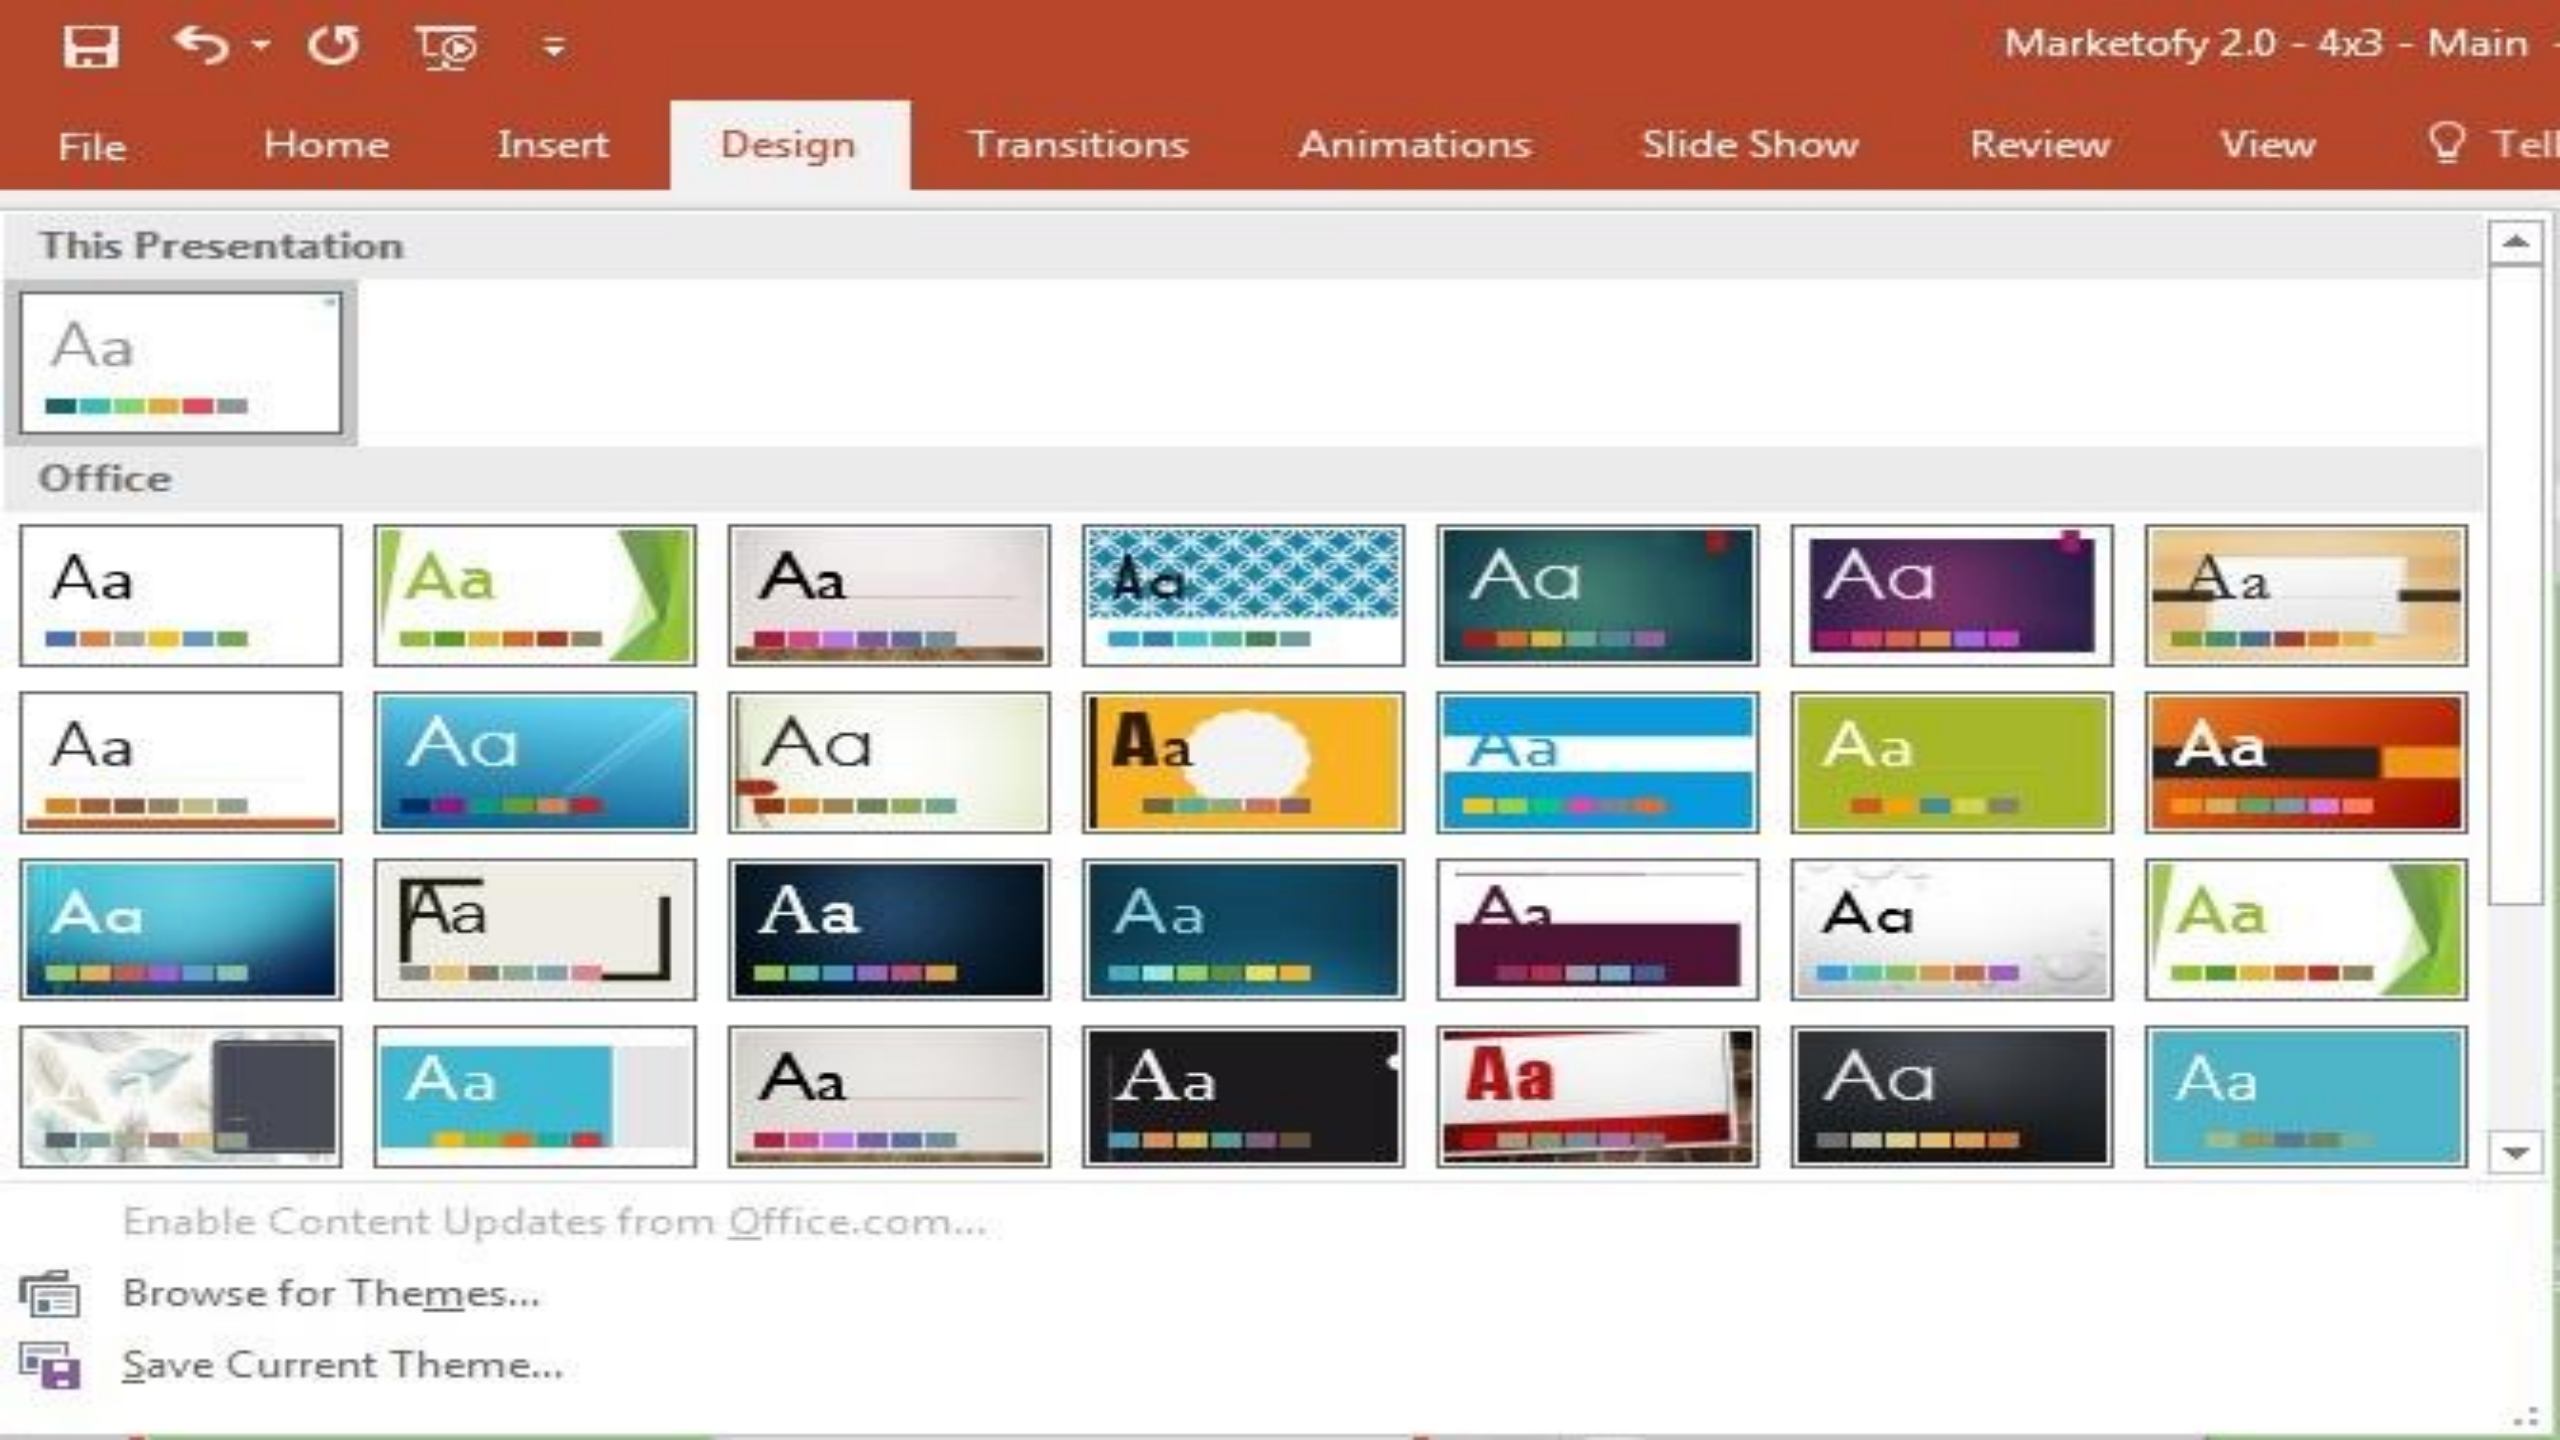

1. Open the presentation software
2. Click **New Presentation**
3. Choose a blank presentation or template
4. Insert a title slide
5. Add new slides
6. Type information on the slides
7. Save the presentation

Appling a Design Theme

- PowerPoint provides a number of design themes to help you quickly create a professional looking presentation.
- A design theme includes a set of colors for fill, line, and shadow, called theme colors; a set of fonts for titles and other text, called theme fonts; and a set of effects for lines and fills, called theme effects to create a cohesive look.

Adding Slide Headers and Footers

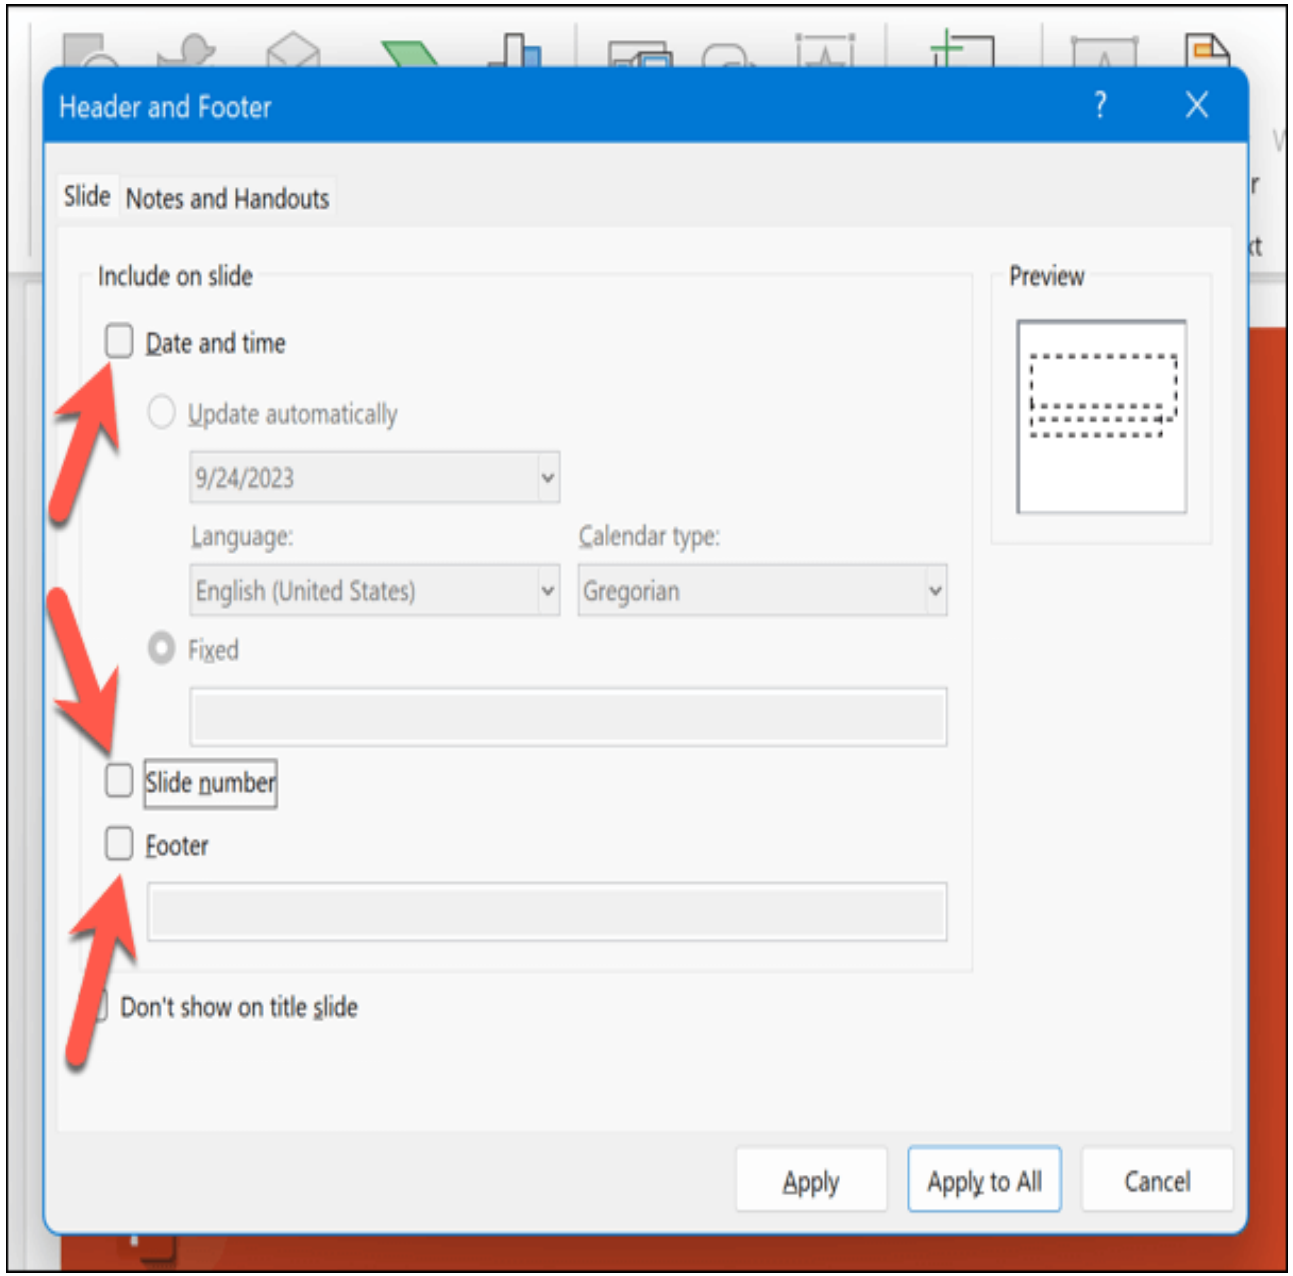

- Header and footer text, such as your name, school or company name, the slide number, and the date, can give your slides a polished look and make it easier for your audience to follow your presentation.
- On slides, you can add text to the footer; however, notes or handouts can include both header and footer text. Footer information that you apply to the slides of your presentation is visible in the PowerPoint views and when you print the slides. Notes and handouts header and footer text is visible when you print notes pages, handouts, and the outline.

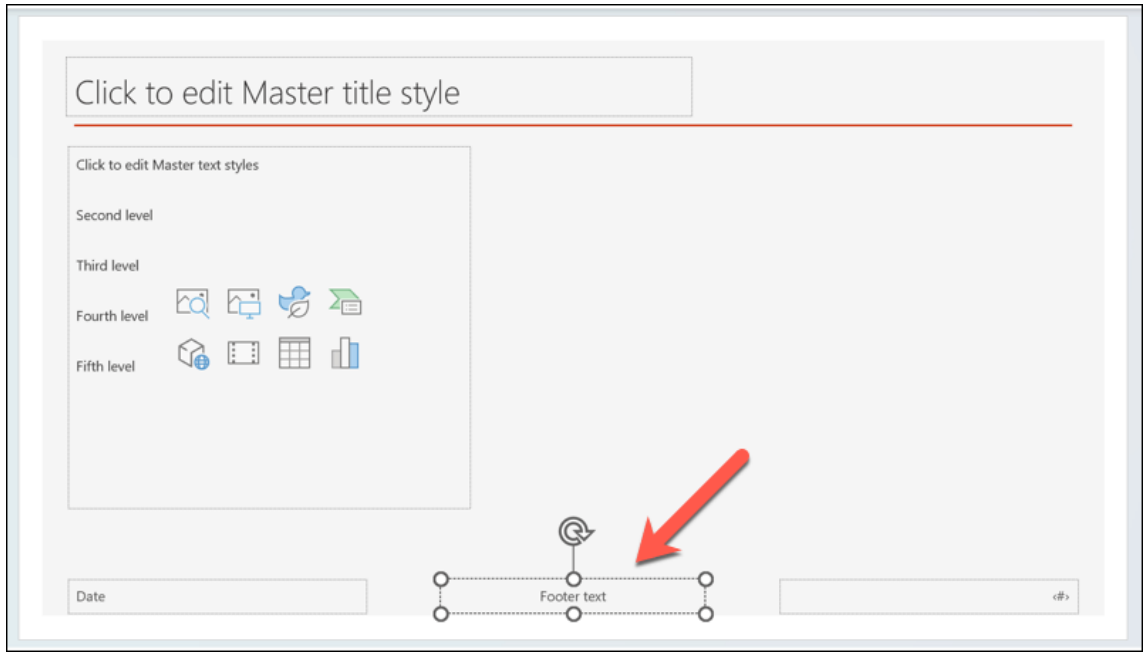

Insert header and footer

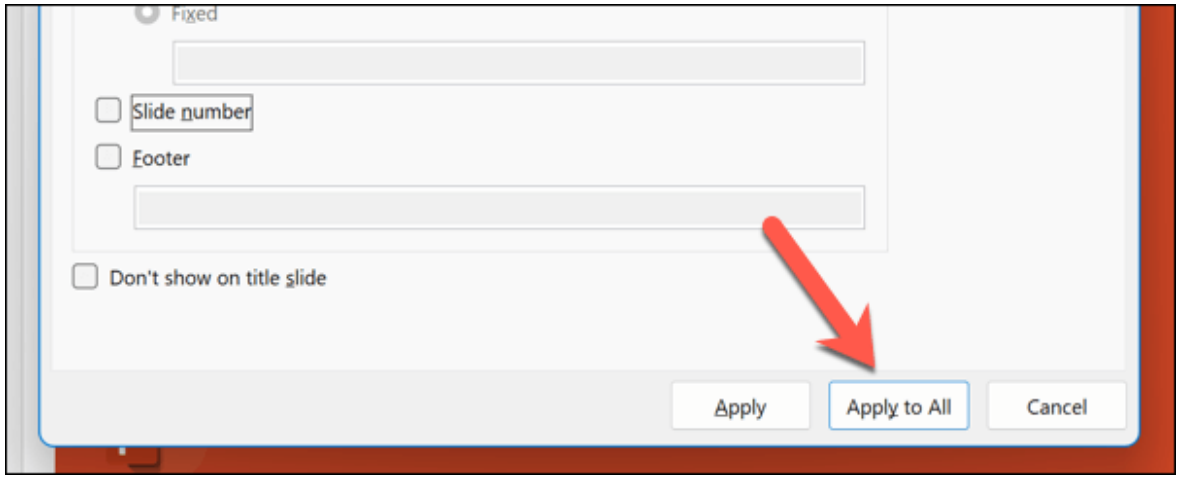

- When the user selects the Header & Footer button, the Header and Footer dialog box appears.

Organizing and Editing Slides

Slides can be arranged and edited to improve the presentation.

Ways of Organizing Slides

- Rearranging slide order
- Renaming slides
- Deleting unwanted slides
- Duplicating slides

Editing Slides

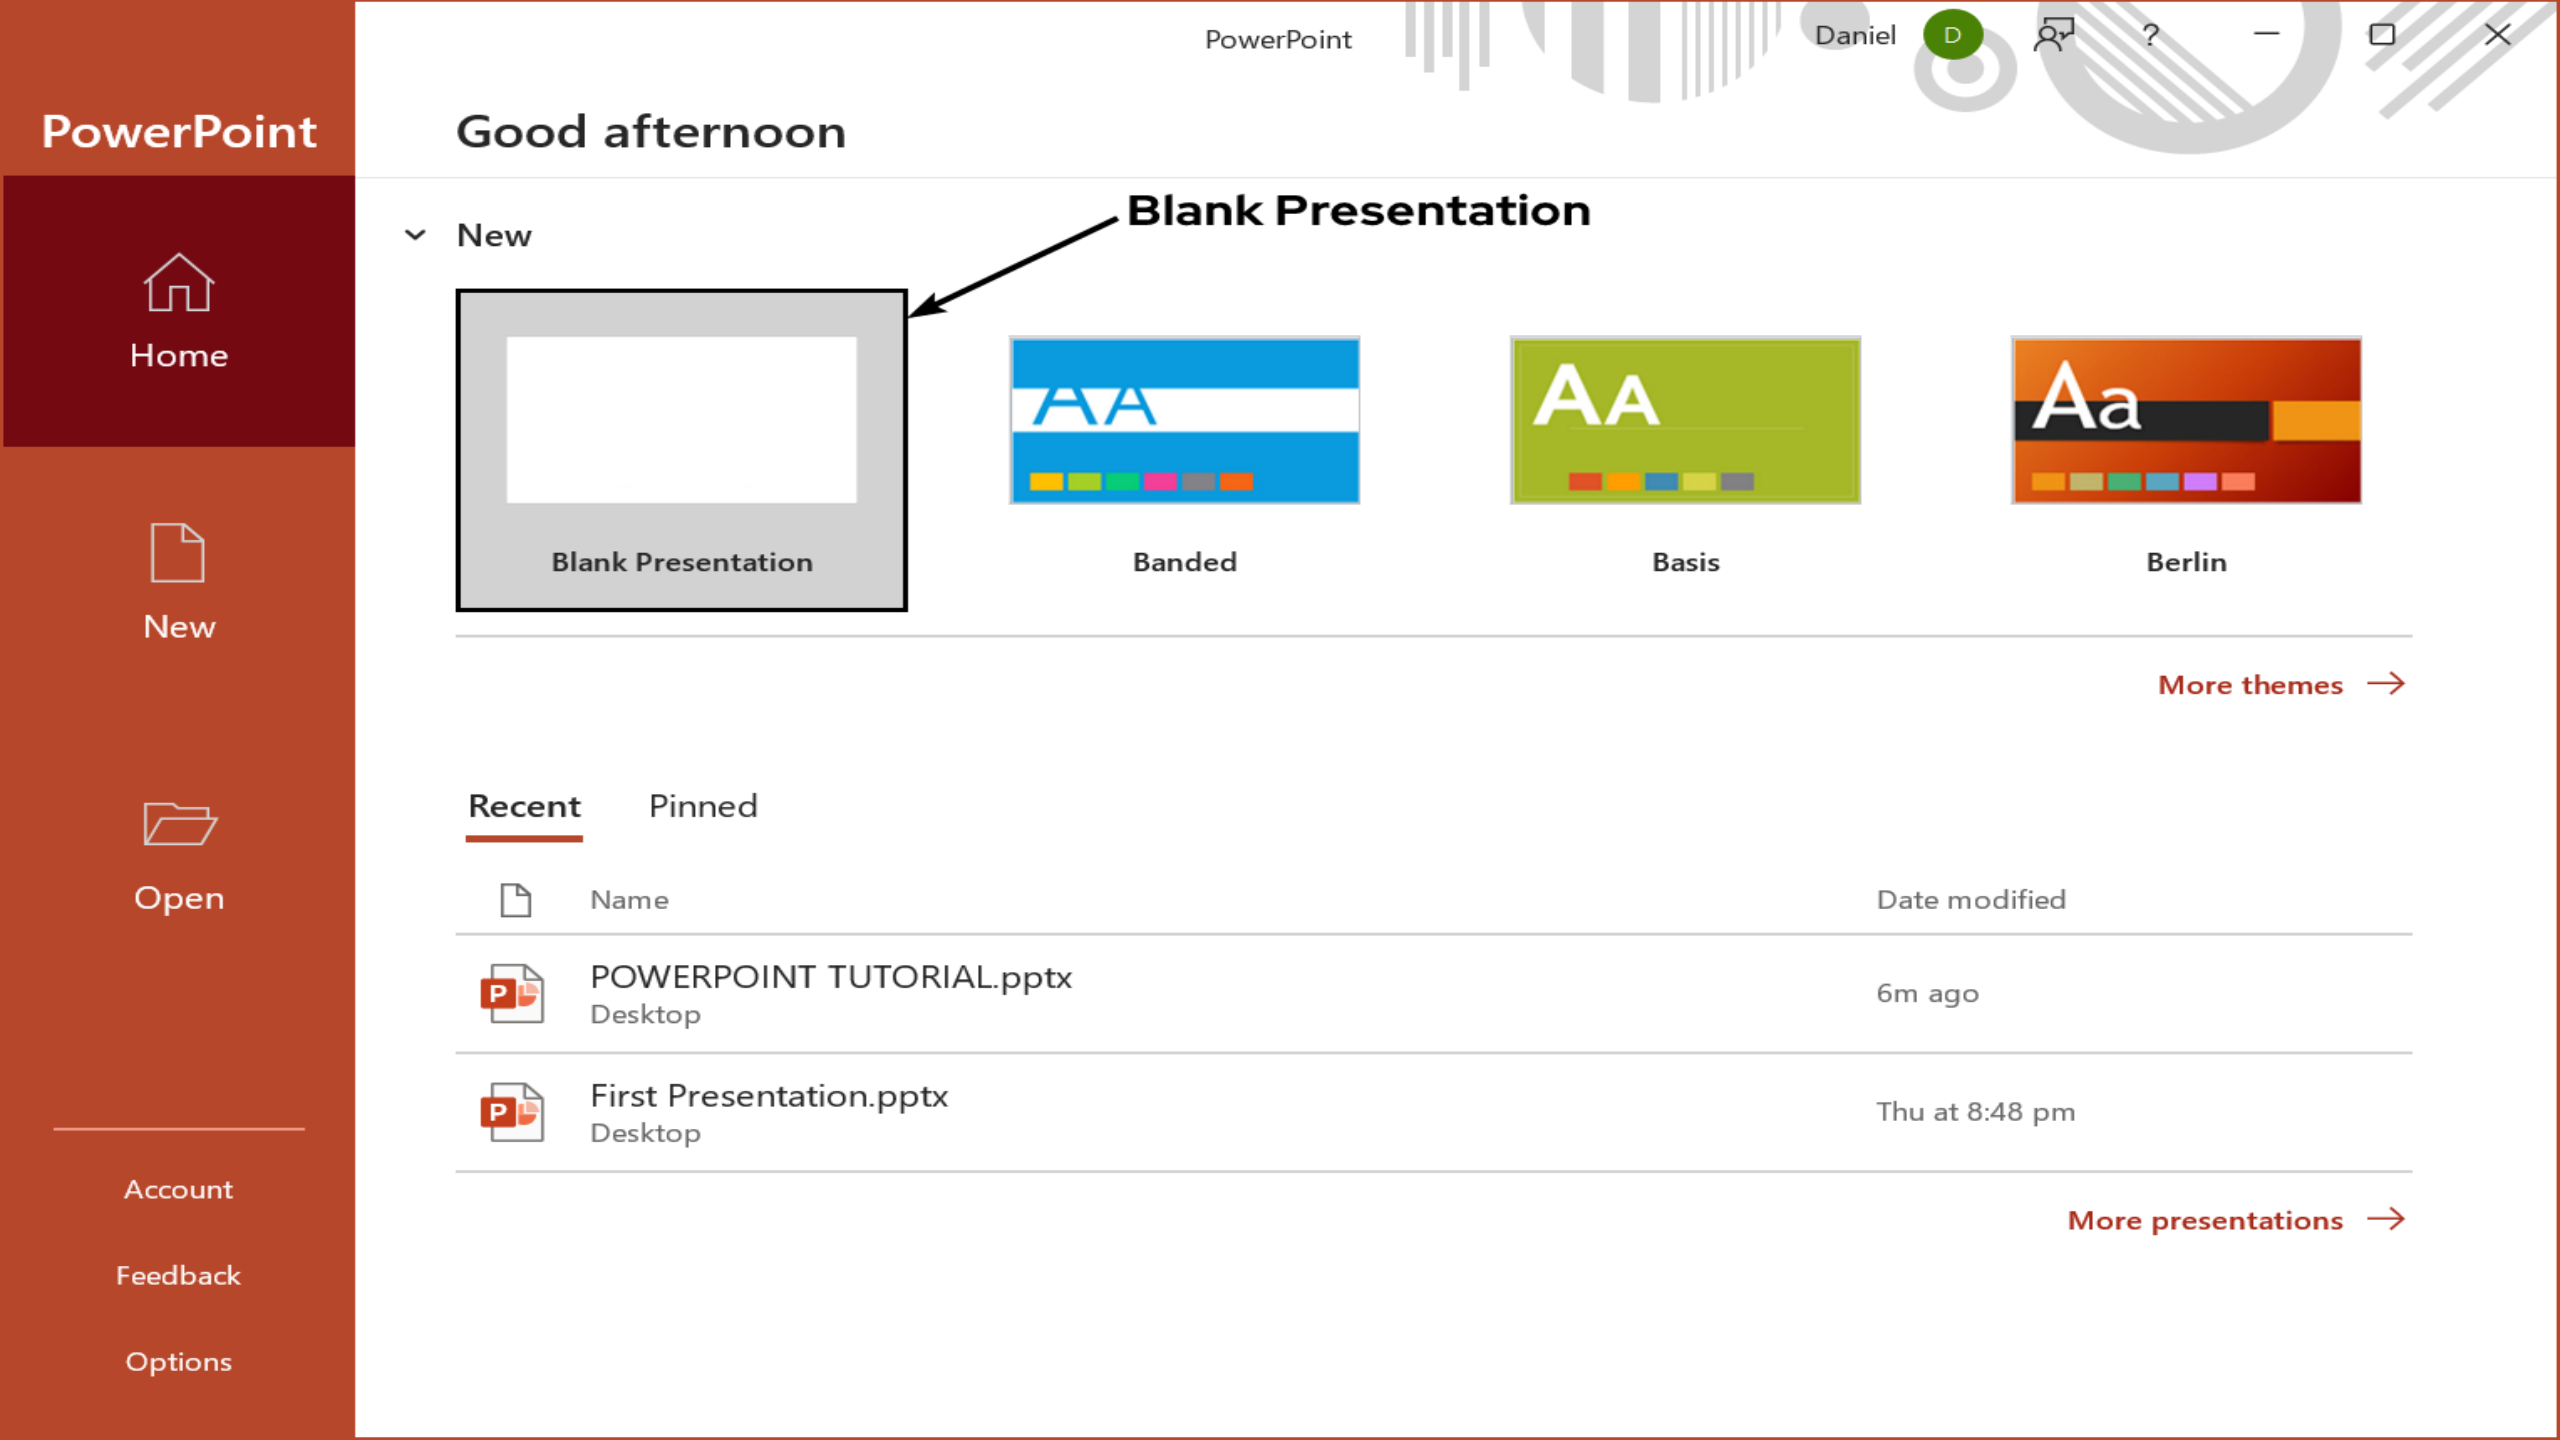

Editing means changing or improving slide content.

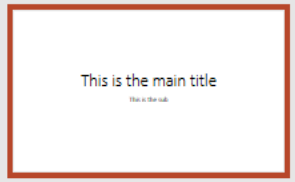

Examples include:

- Changing text size, colour, and font
- Correcting spelling mistakes
- Adding shapes and designs
- Changing slide backgrounds

Formatting text on a slide

- Once you have entered and edited the text in your presentation, you can modify the way the text looks to emphasize your message.
- Important text should be highlighted in some way to distinguish it from other text or objects on the slide.
- For example, if you have two text objects on the same slide, you could draw attention to one text object by changing its color, font, or size.

This is the main title

This is the subtitle

Delete and Add Slides

- To delete a slide, select the slide and right click on the mouse. Select delete slide. The user can also select the slide and press the Delete key.
- New slides can easily be added to a presentation. Slide layouts vary and depending on the content to be presented will determine the slide layout used. Most slide layouts include one or more placeholders for content (e.g., text and graphics).

Activity 3: Formatting and editing text on a slide

Scenario

Elizabeth created a presentation for the ICT Club. The text is very small, has different font styles on every slide, and contains spelling mistakes.

Activity

Open a slide containing text and:

- Change the font style.
- Increase the font size.
- Apply bold formatting to the heading.
- Change the font colour.
- Correct spelling errors.
- Align the title to the Centre.

Questions [6 Marks]

1. Why is text formatting important in a presentation? [1]
2. Which formatting option makes text darker and more noticeable? [1]
3. What tool is used to correct typing mistakes? [1]
4. Why should large fonts be used during presentations? [1]
5. Give two examples of text formatting features. [2]

Animations and Transitions

Animations

Animations are special effects applied to objects such as text or pictures on a slide.

Examples:

- Fly In
- Bounce
- Fade
- Zoom

Importance of Animations

- Makes presentations interesting
- Emphasizes important points
- Attracts audience attention

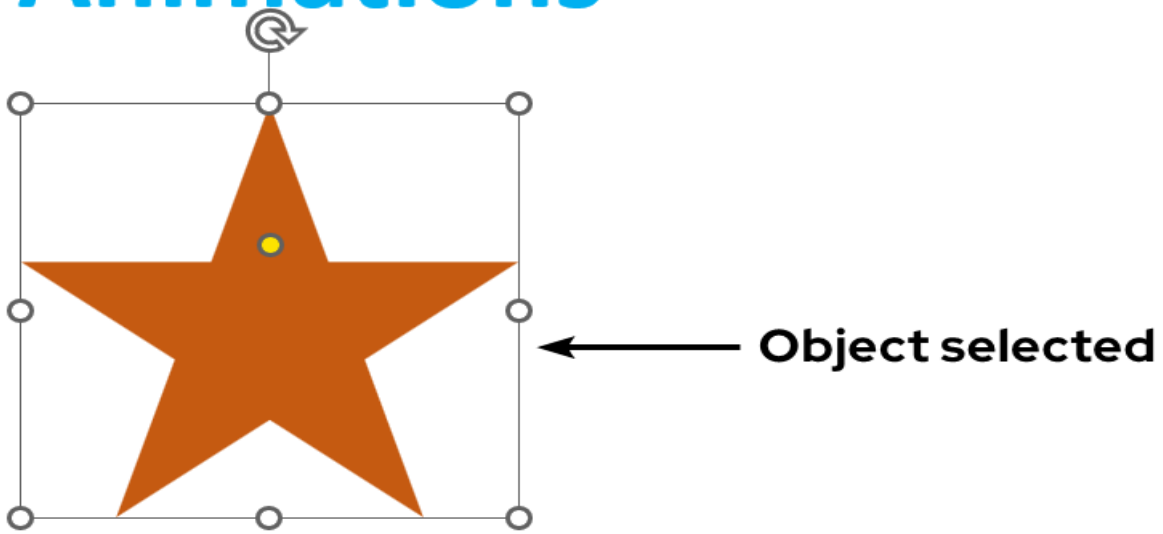

- Animations are another design item that is unique to PowerPoint.
- An animation can be as simple as using a transition-like effect on an item, like fading out a picture. Or it can be used to bring in a list of text one bulleted line at a time.
- You can create an animated and programmable ‘button’ to advance pages on a slideshow with a click.
- You would use the Animations tab to add and time animation content so that the show feels like a movie.
- Animations can be applied to text, to pictures, and to inserts like shapes, clipart, WordArt, etc.

Activity 4: Using Animations

Scenario

The Health Learners Club is preparing a presentation on "Healthy Eating Habits." Learners want key points to appear one at a time so that the audience can focus on each point.

Activity

Create a slide with four healthy eating tips and:

- Apply an animation effect to each point.
- Preview the animation.
- Adjust the order of the animations.

Questions [5 Marks]

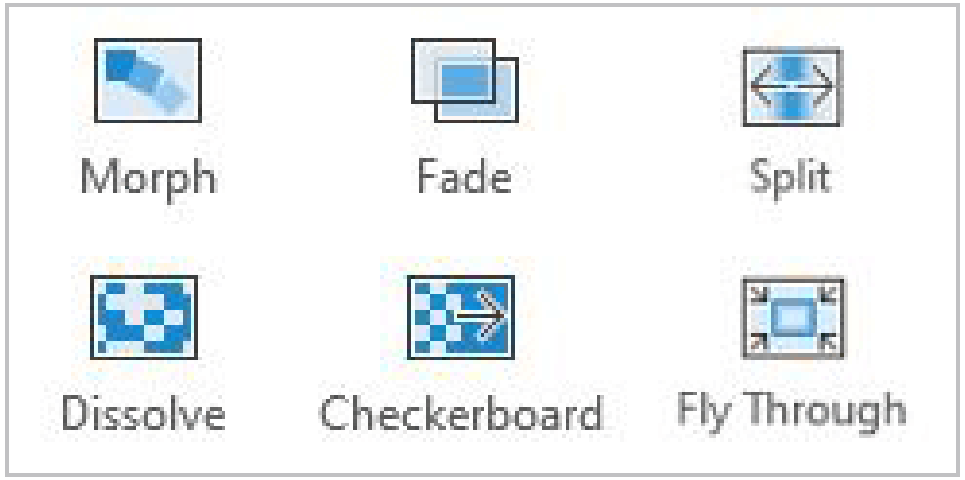

1. What is an animation in PowerPoint? [1]
2. Why are animations used in presentations? [1]
3. Name one animation effect. [1]
4. What may happen if too many animations are used? [1]
5. How can you preview animations? [1]

Transitions

Transitions are effects used when moving from one slide to another.

Examples:

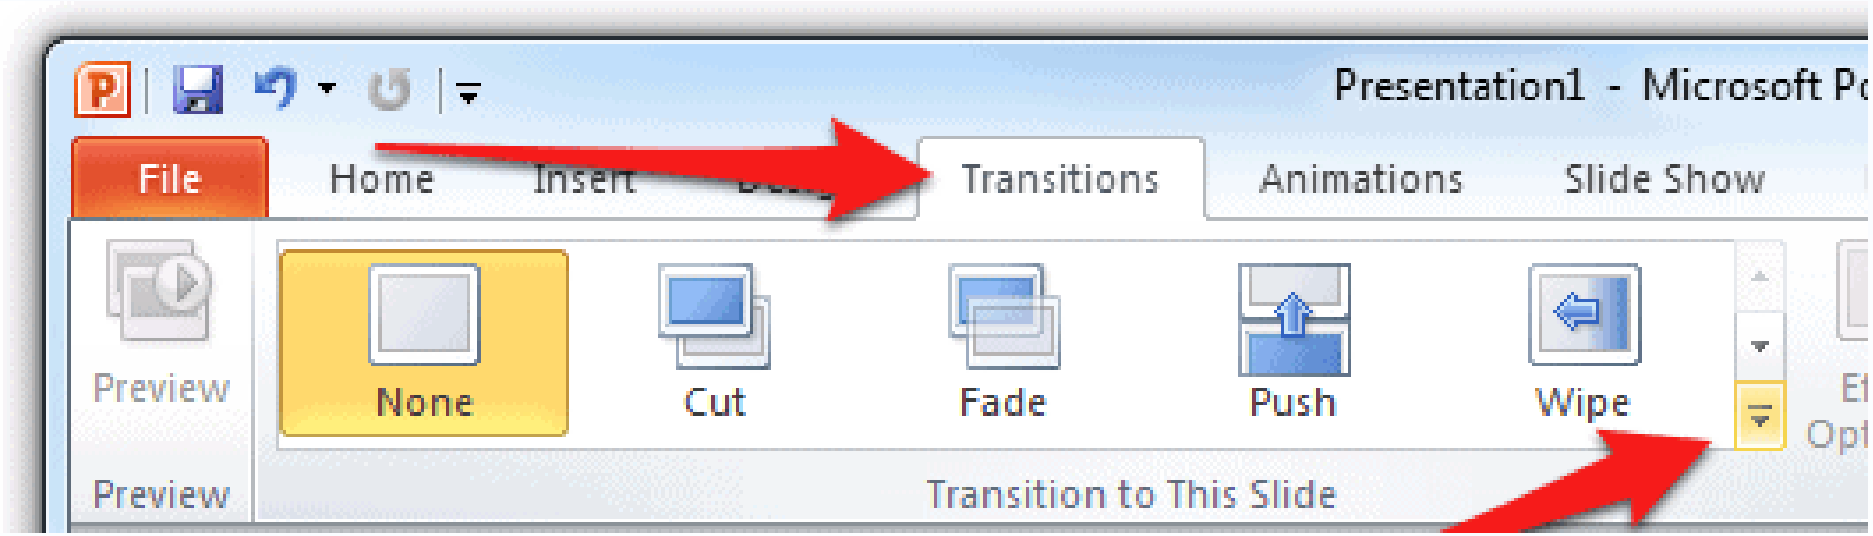

- Fade
- Push
- Wipe
- Split

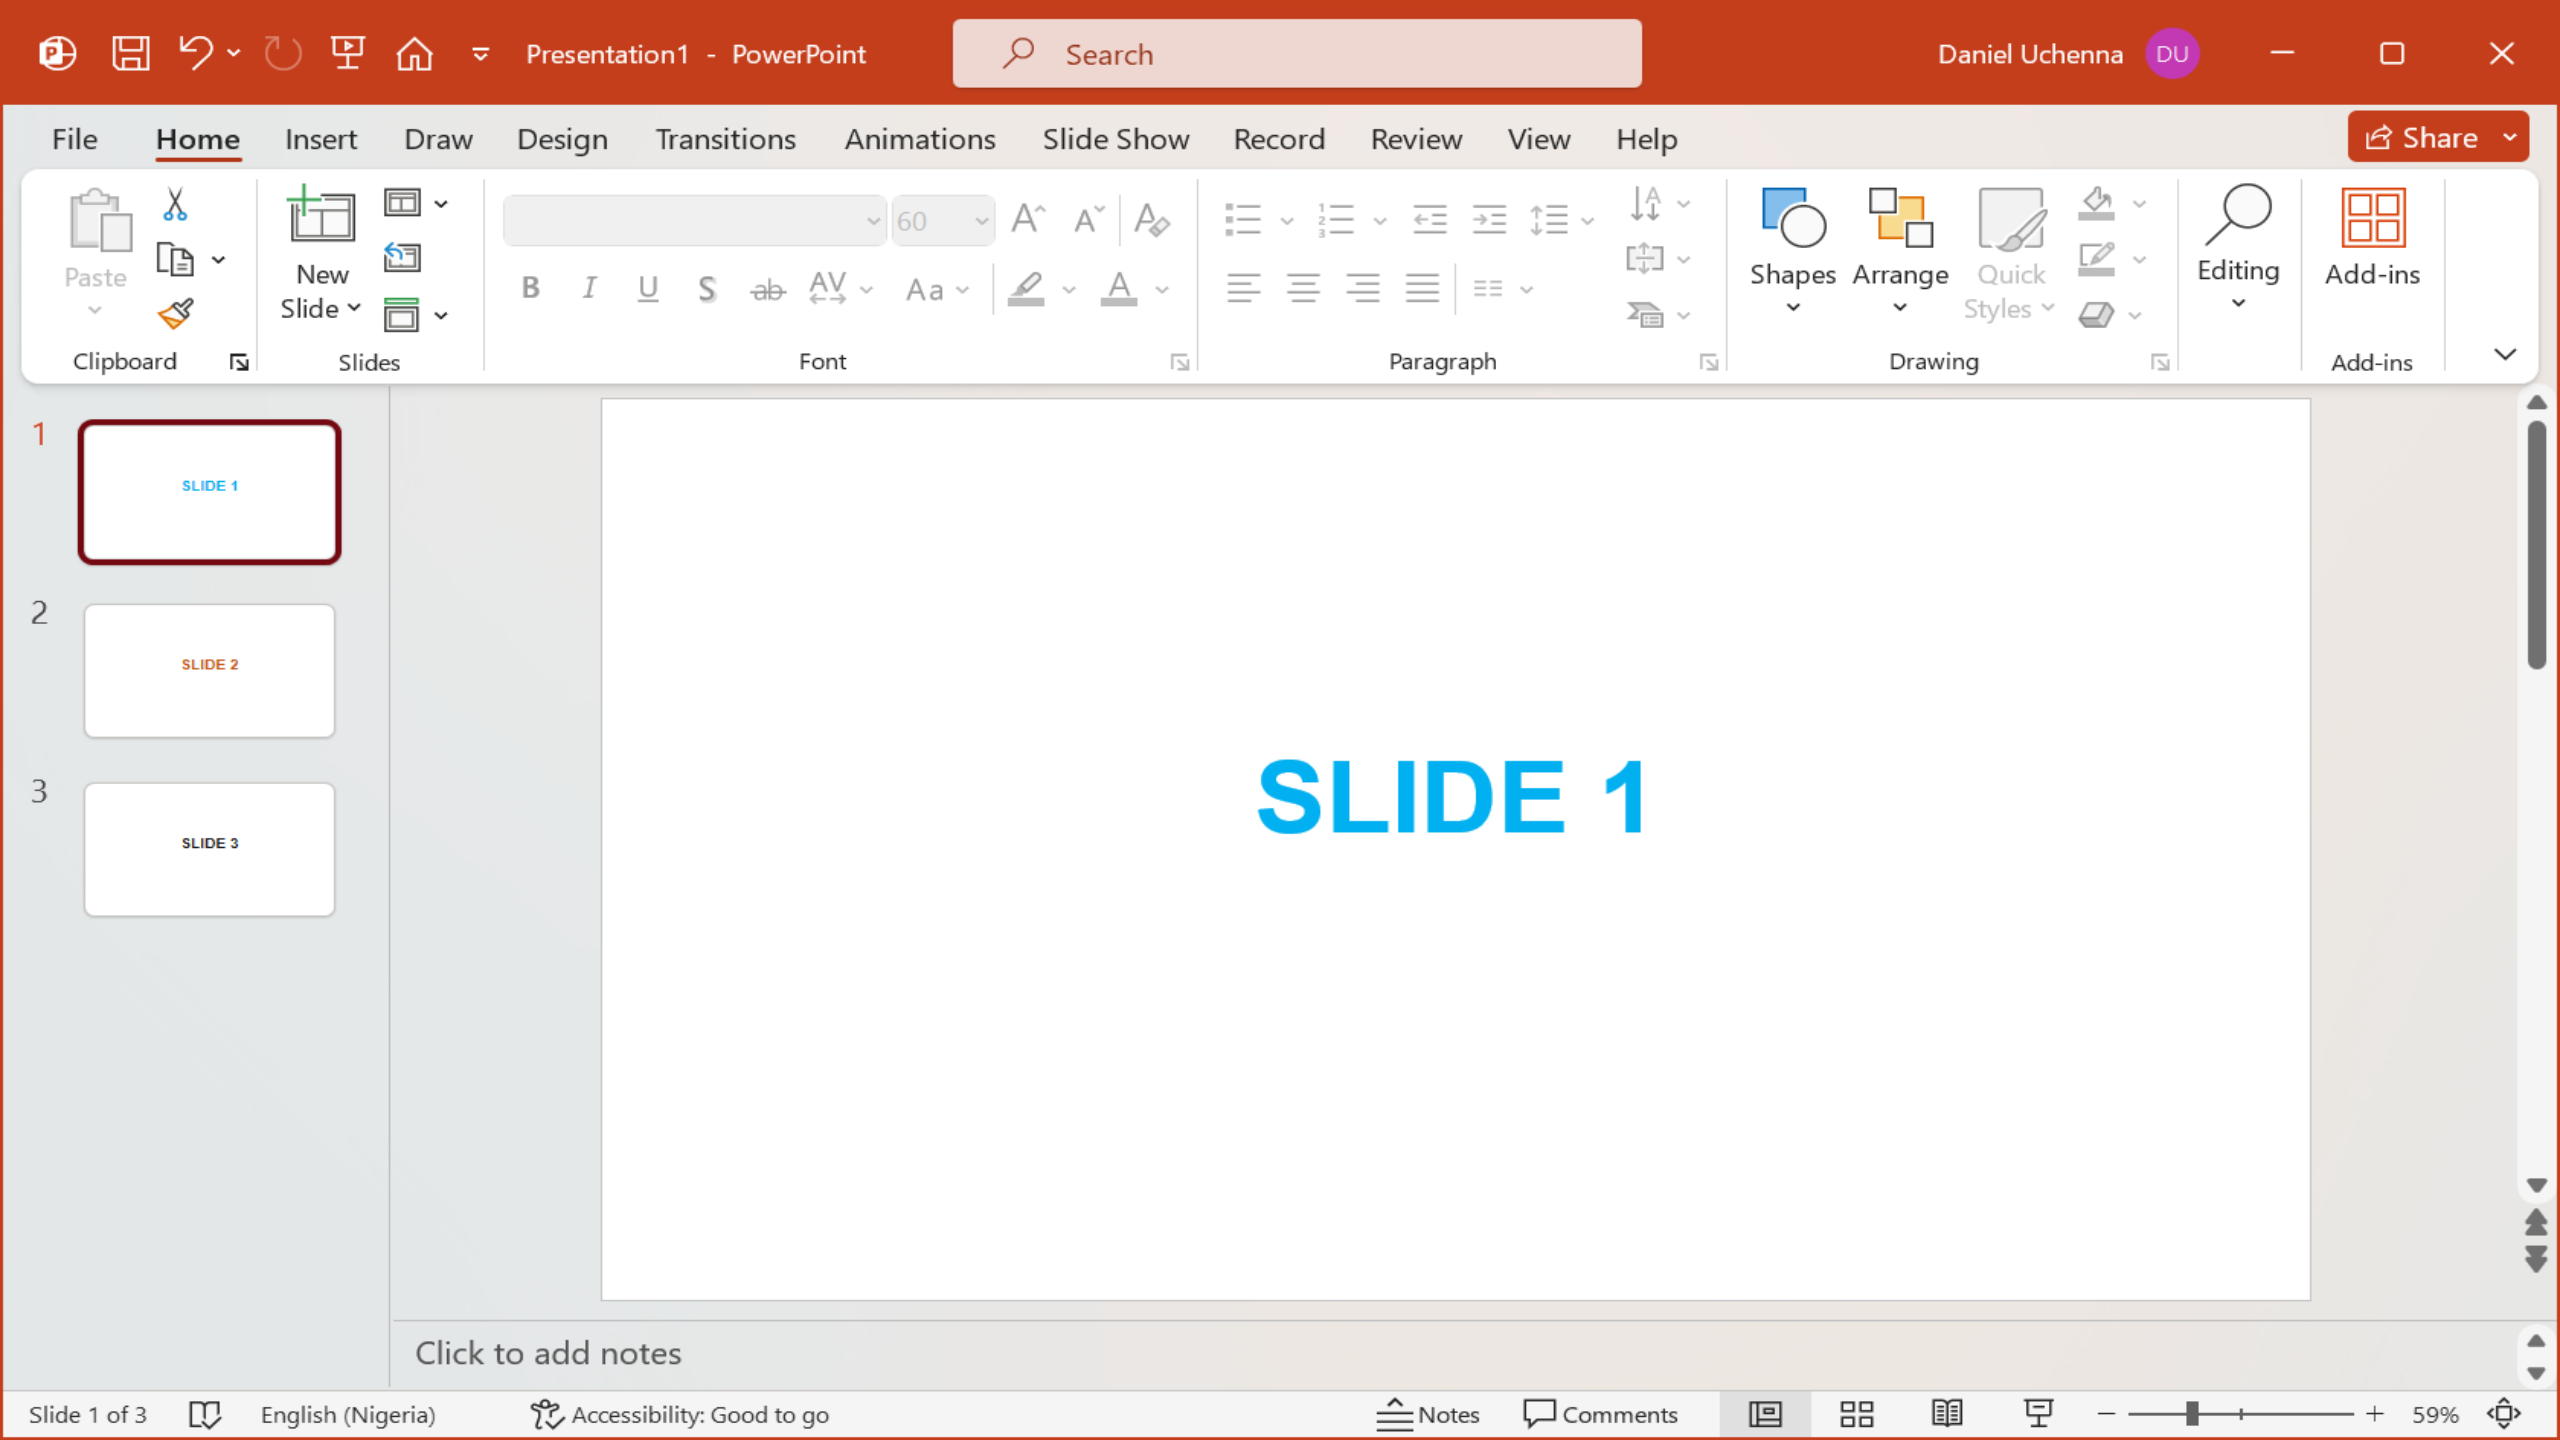

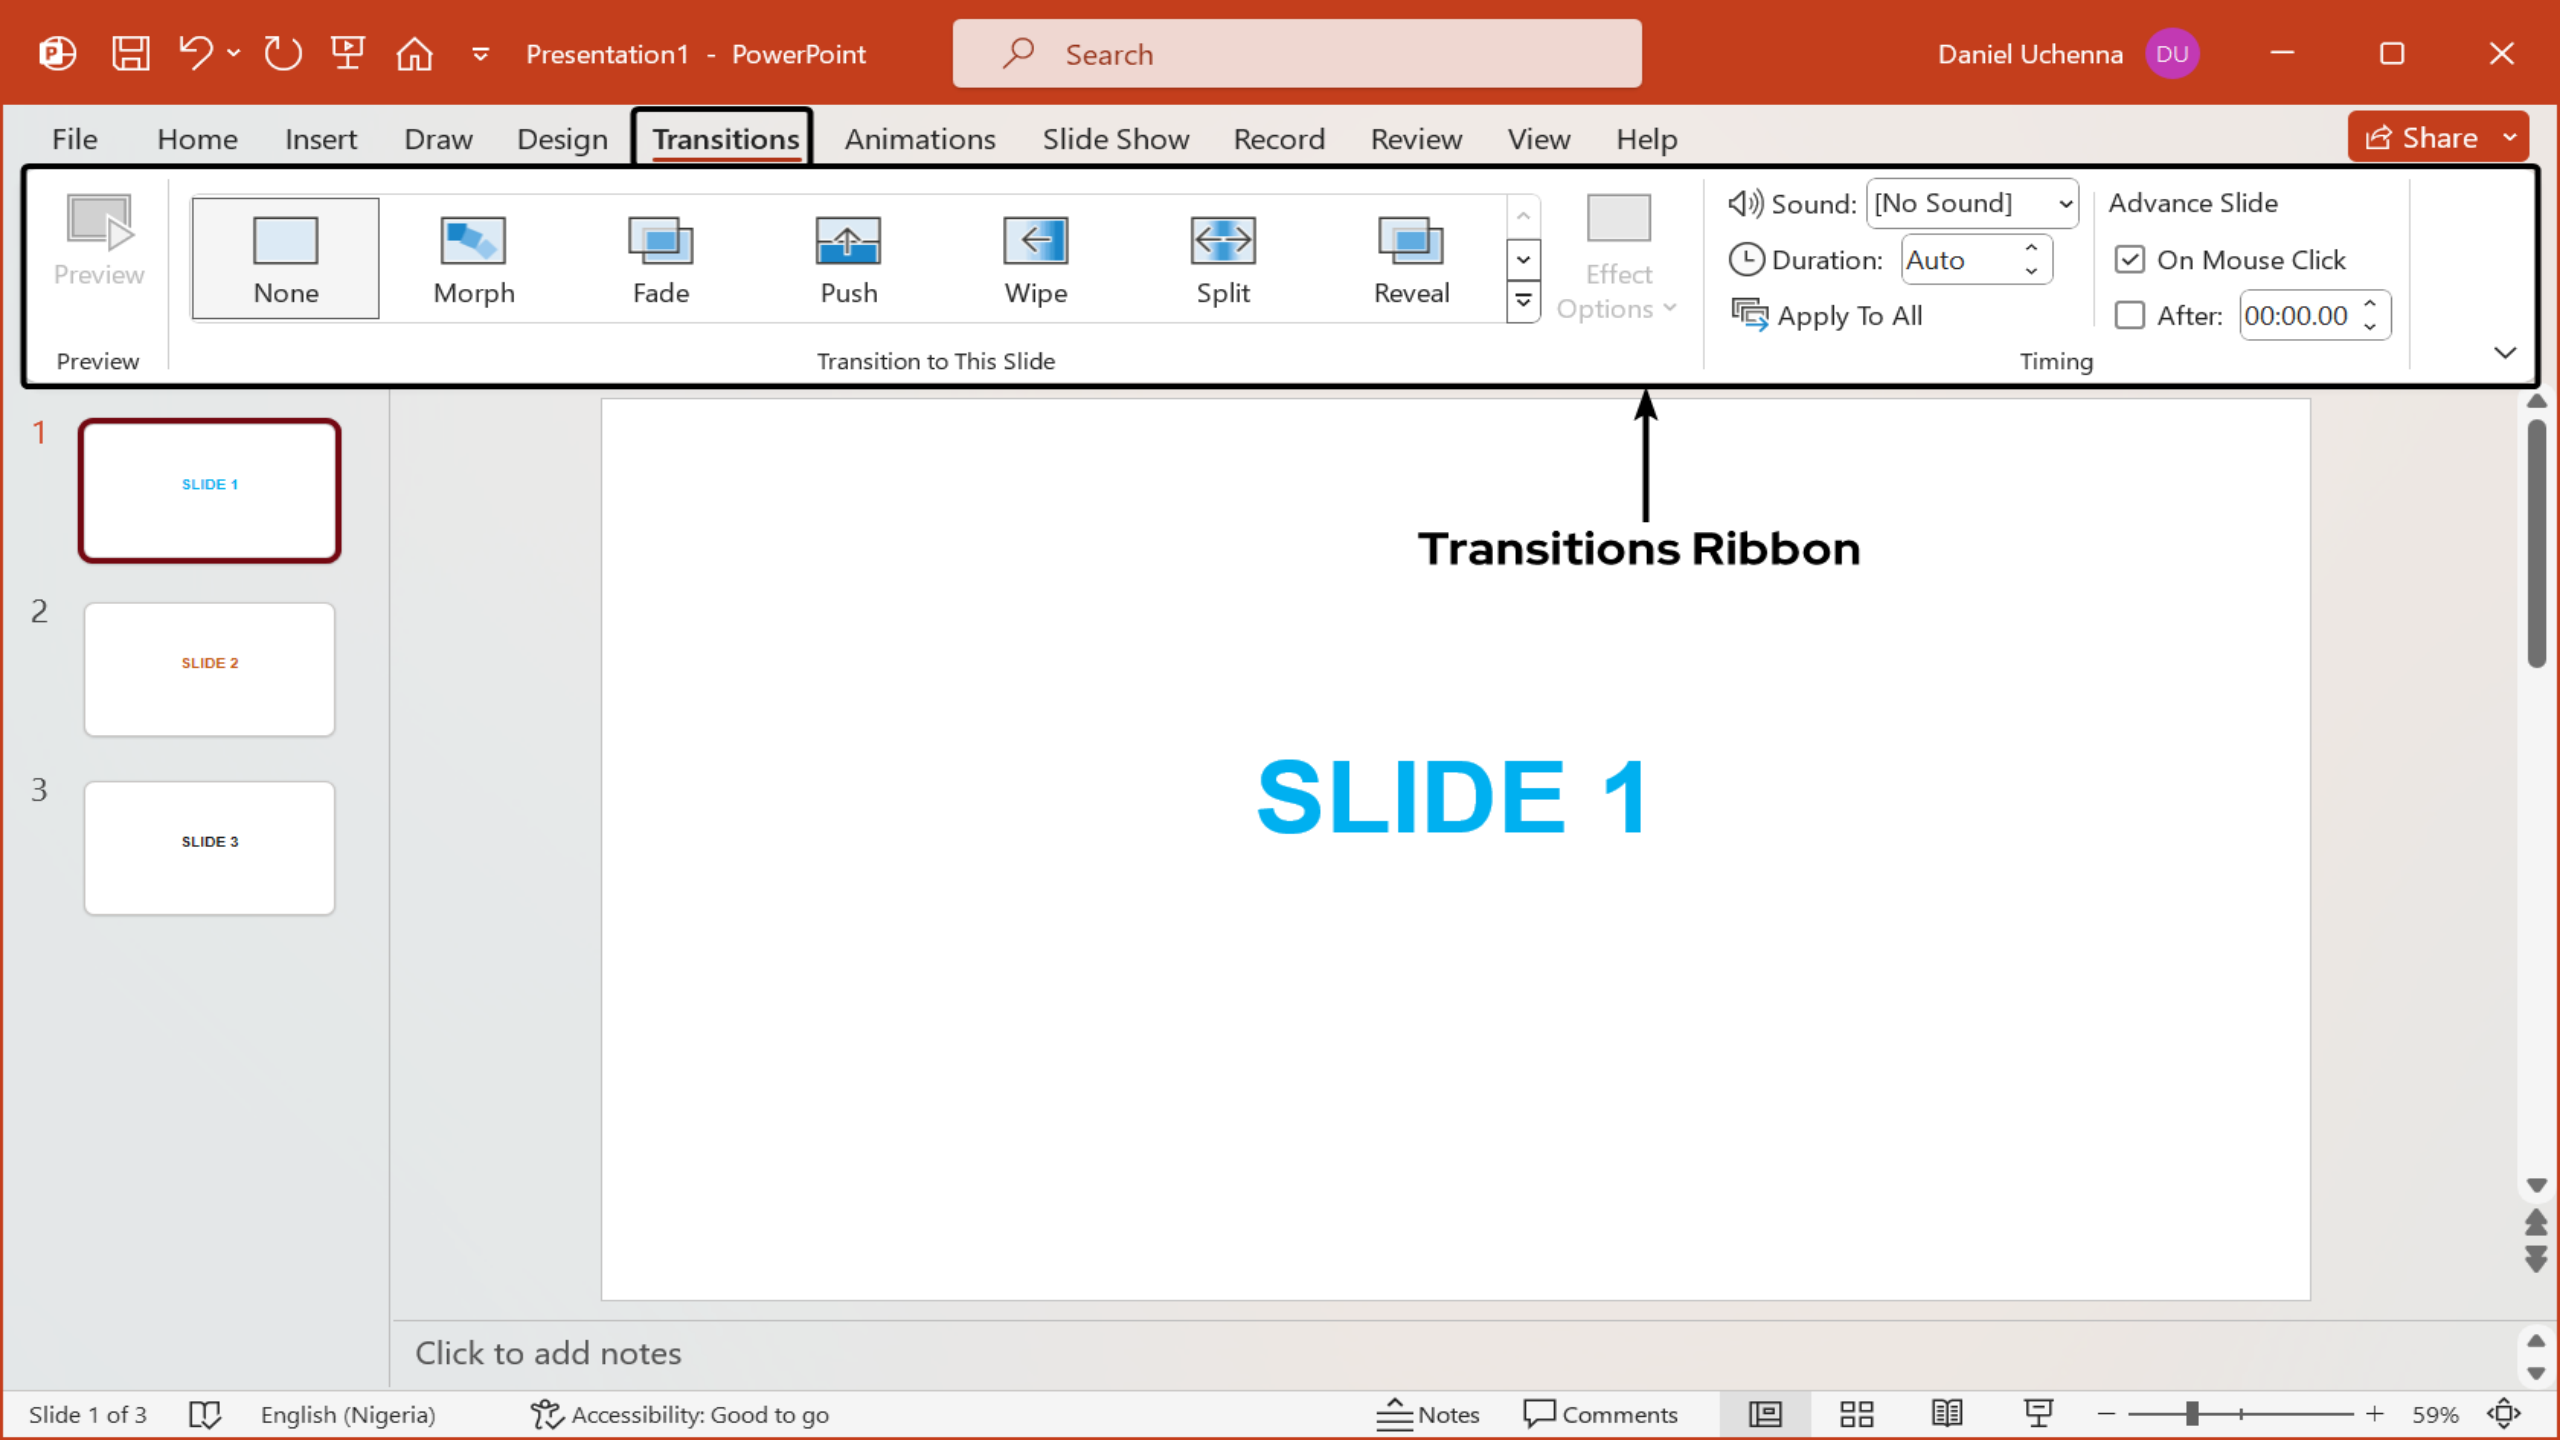

Importance of Transitions

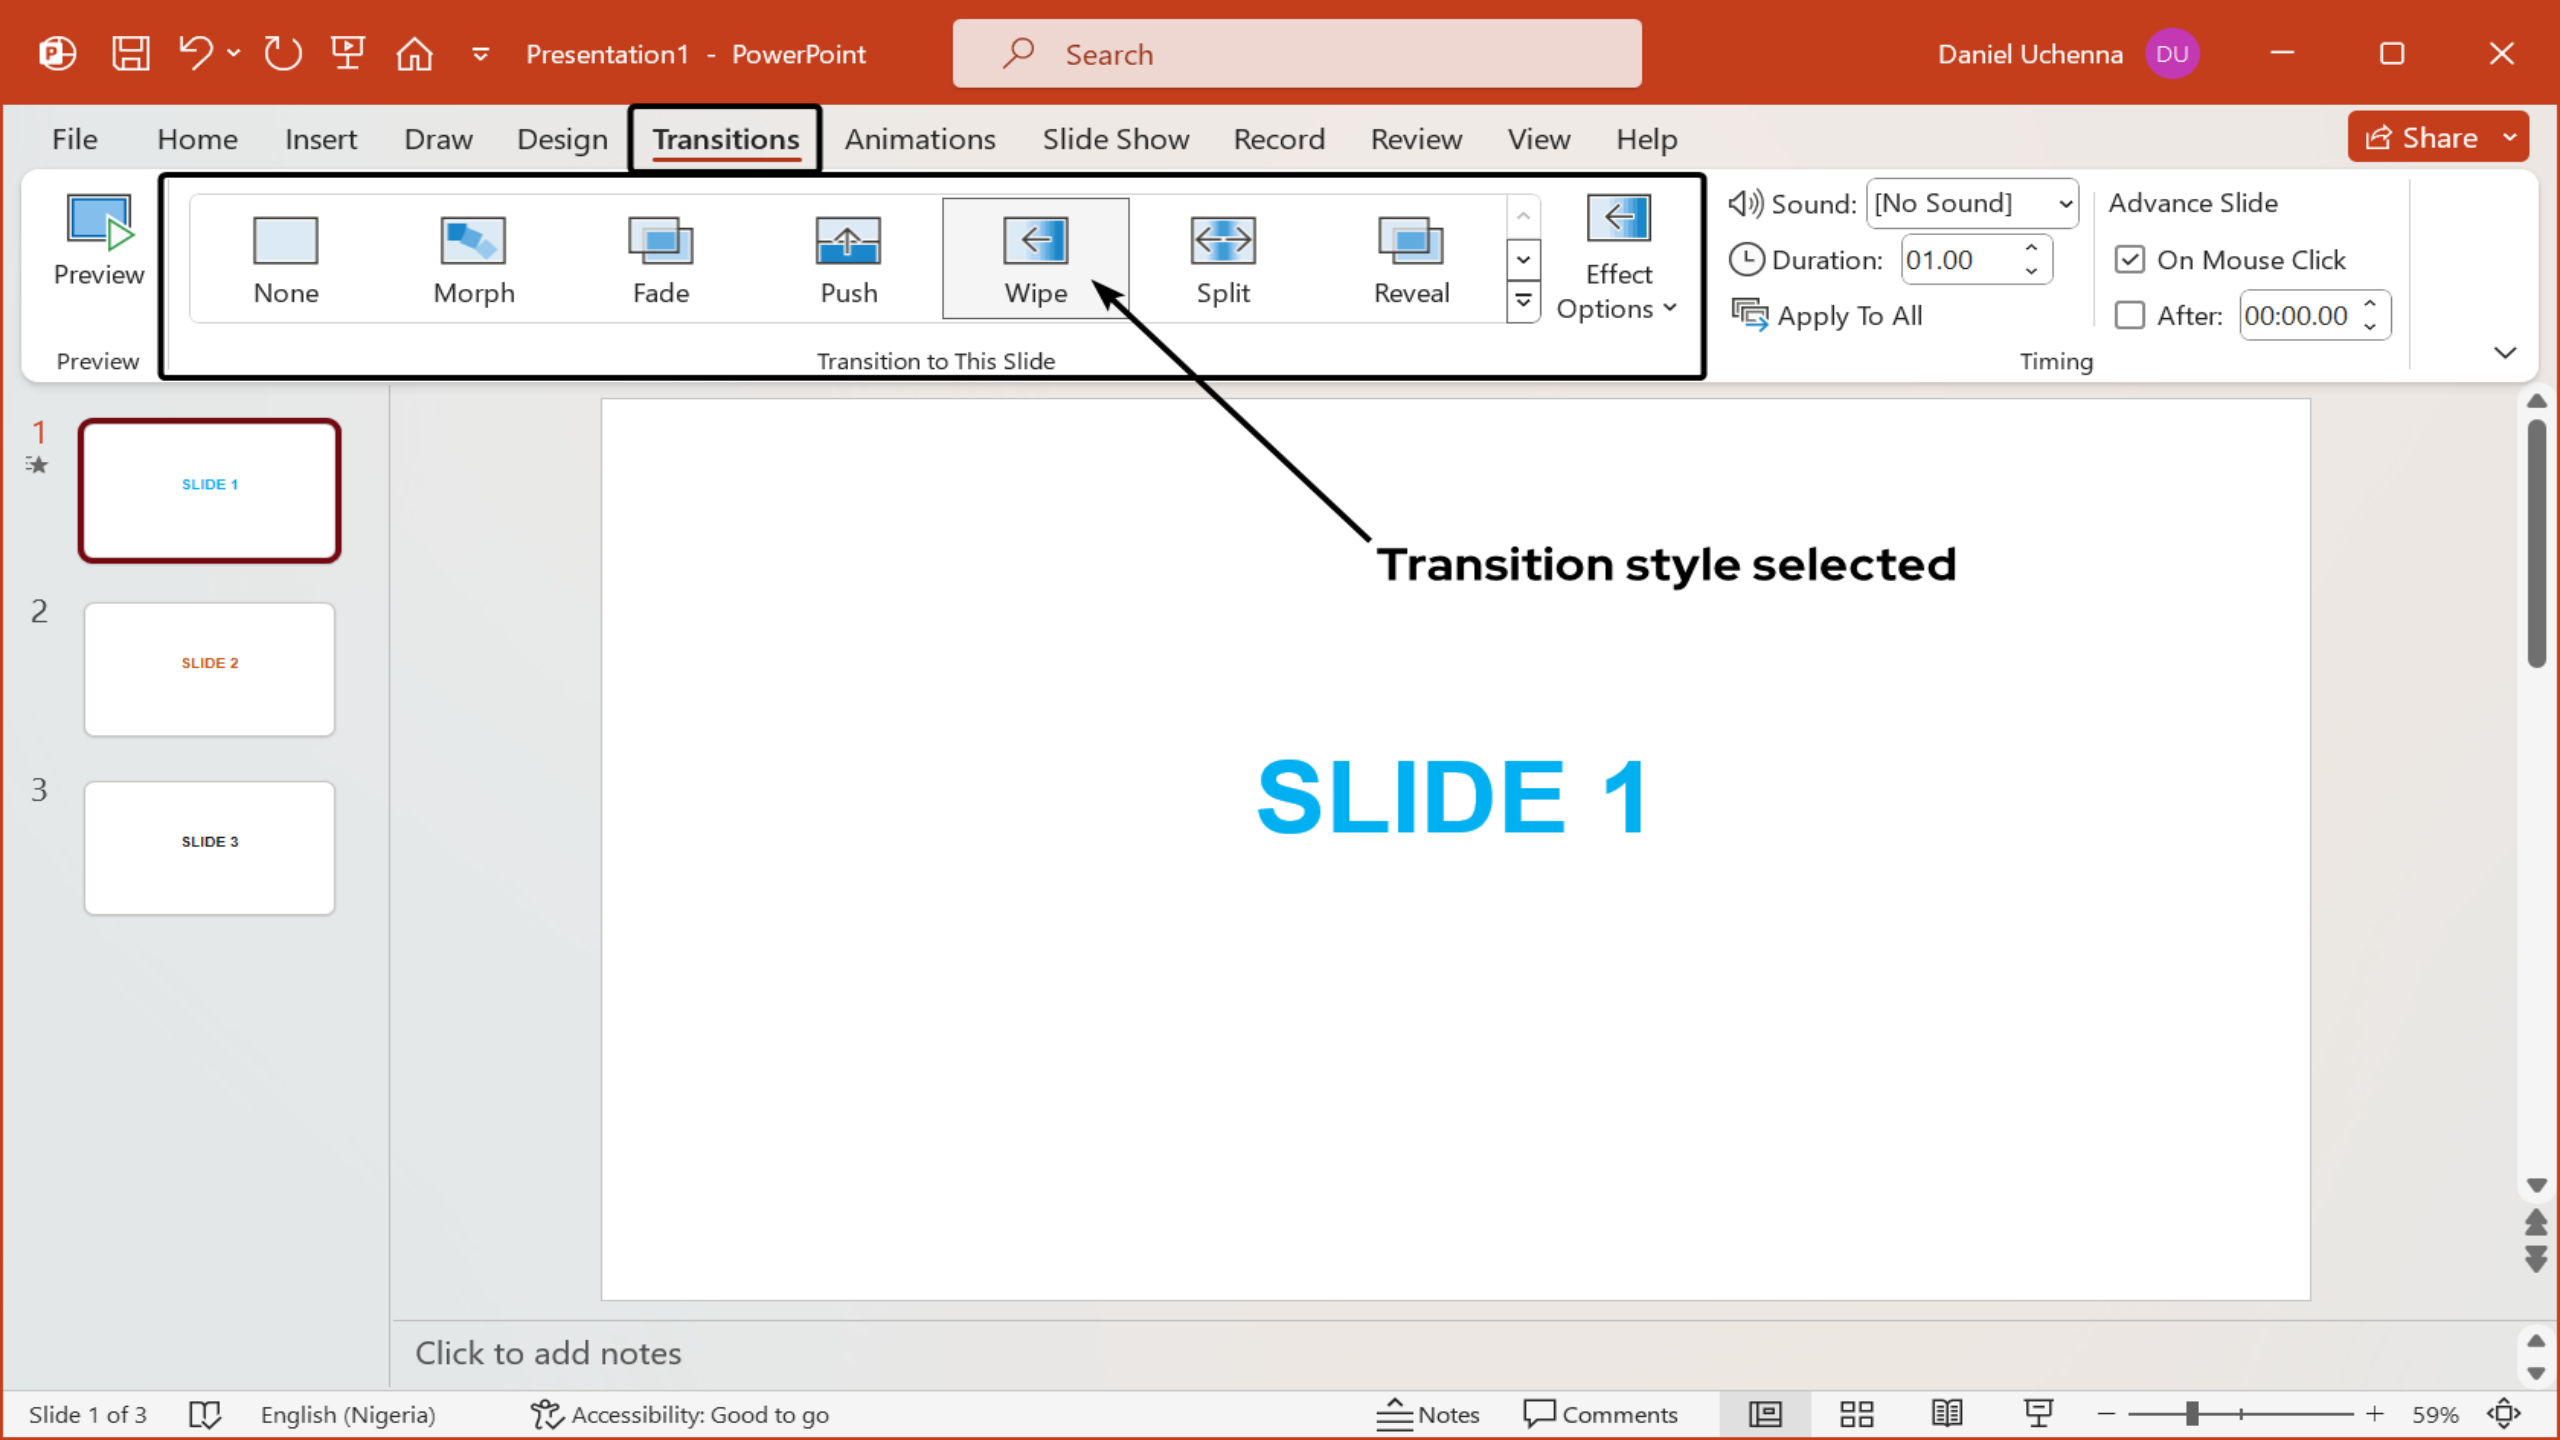

- Creates smooth slide movement
- Improves appearance of presentations
- Makes presentations enjoyable

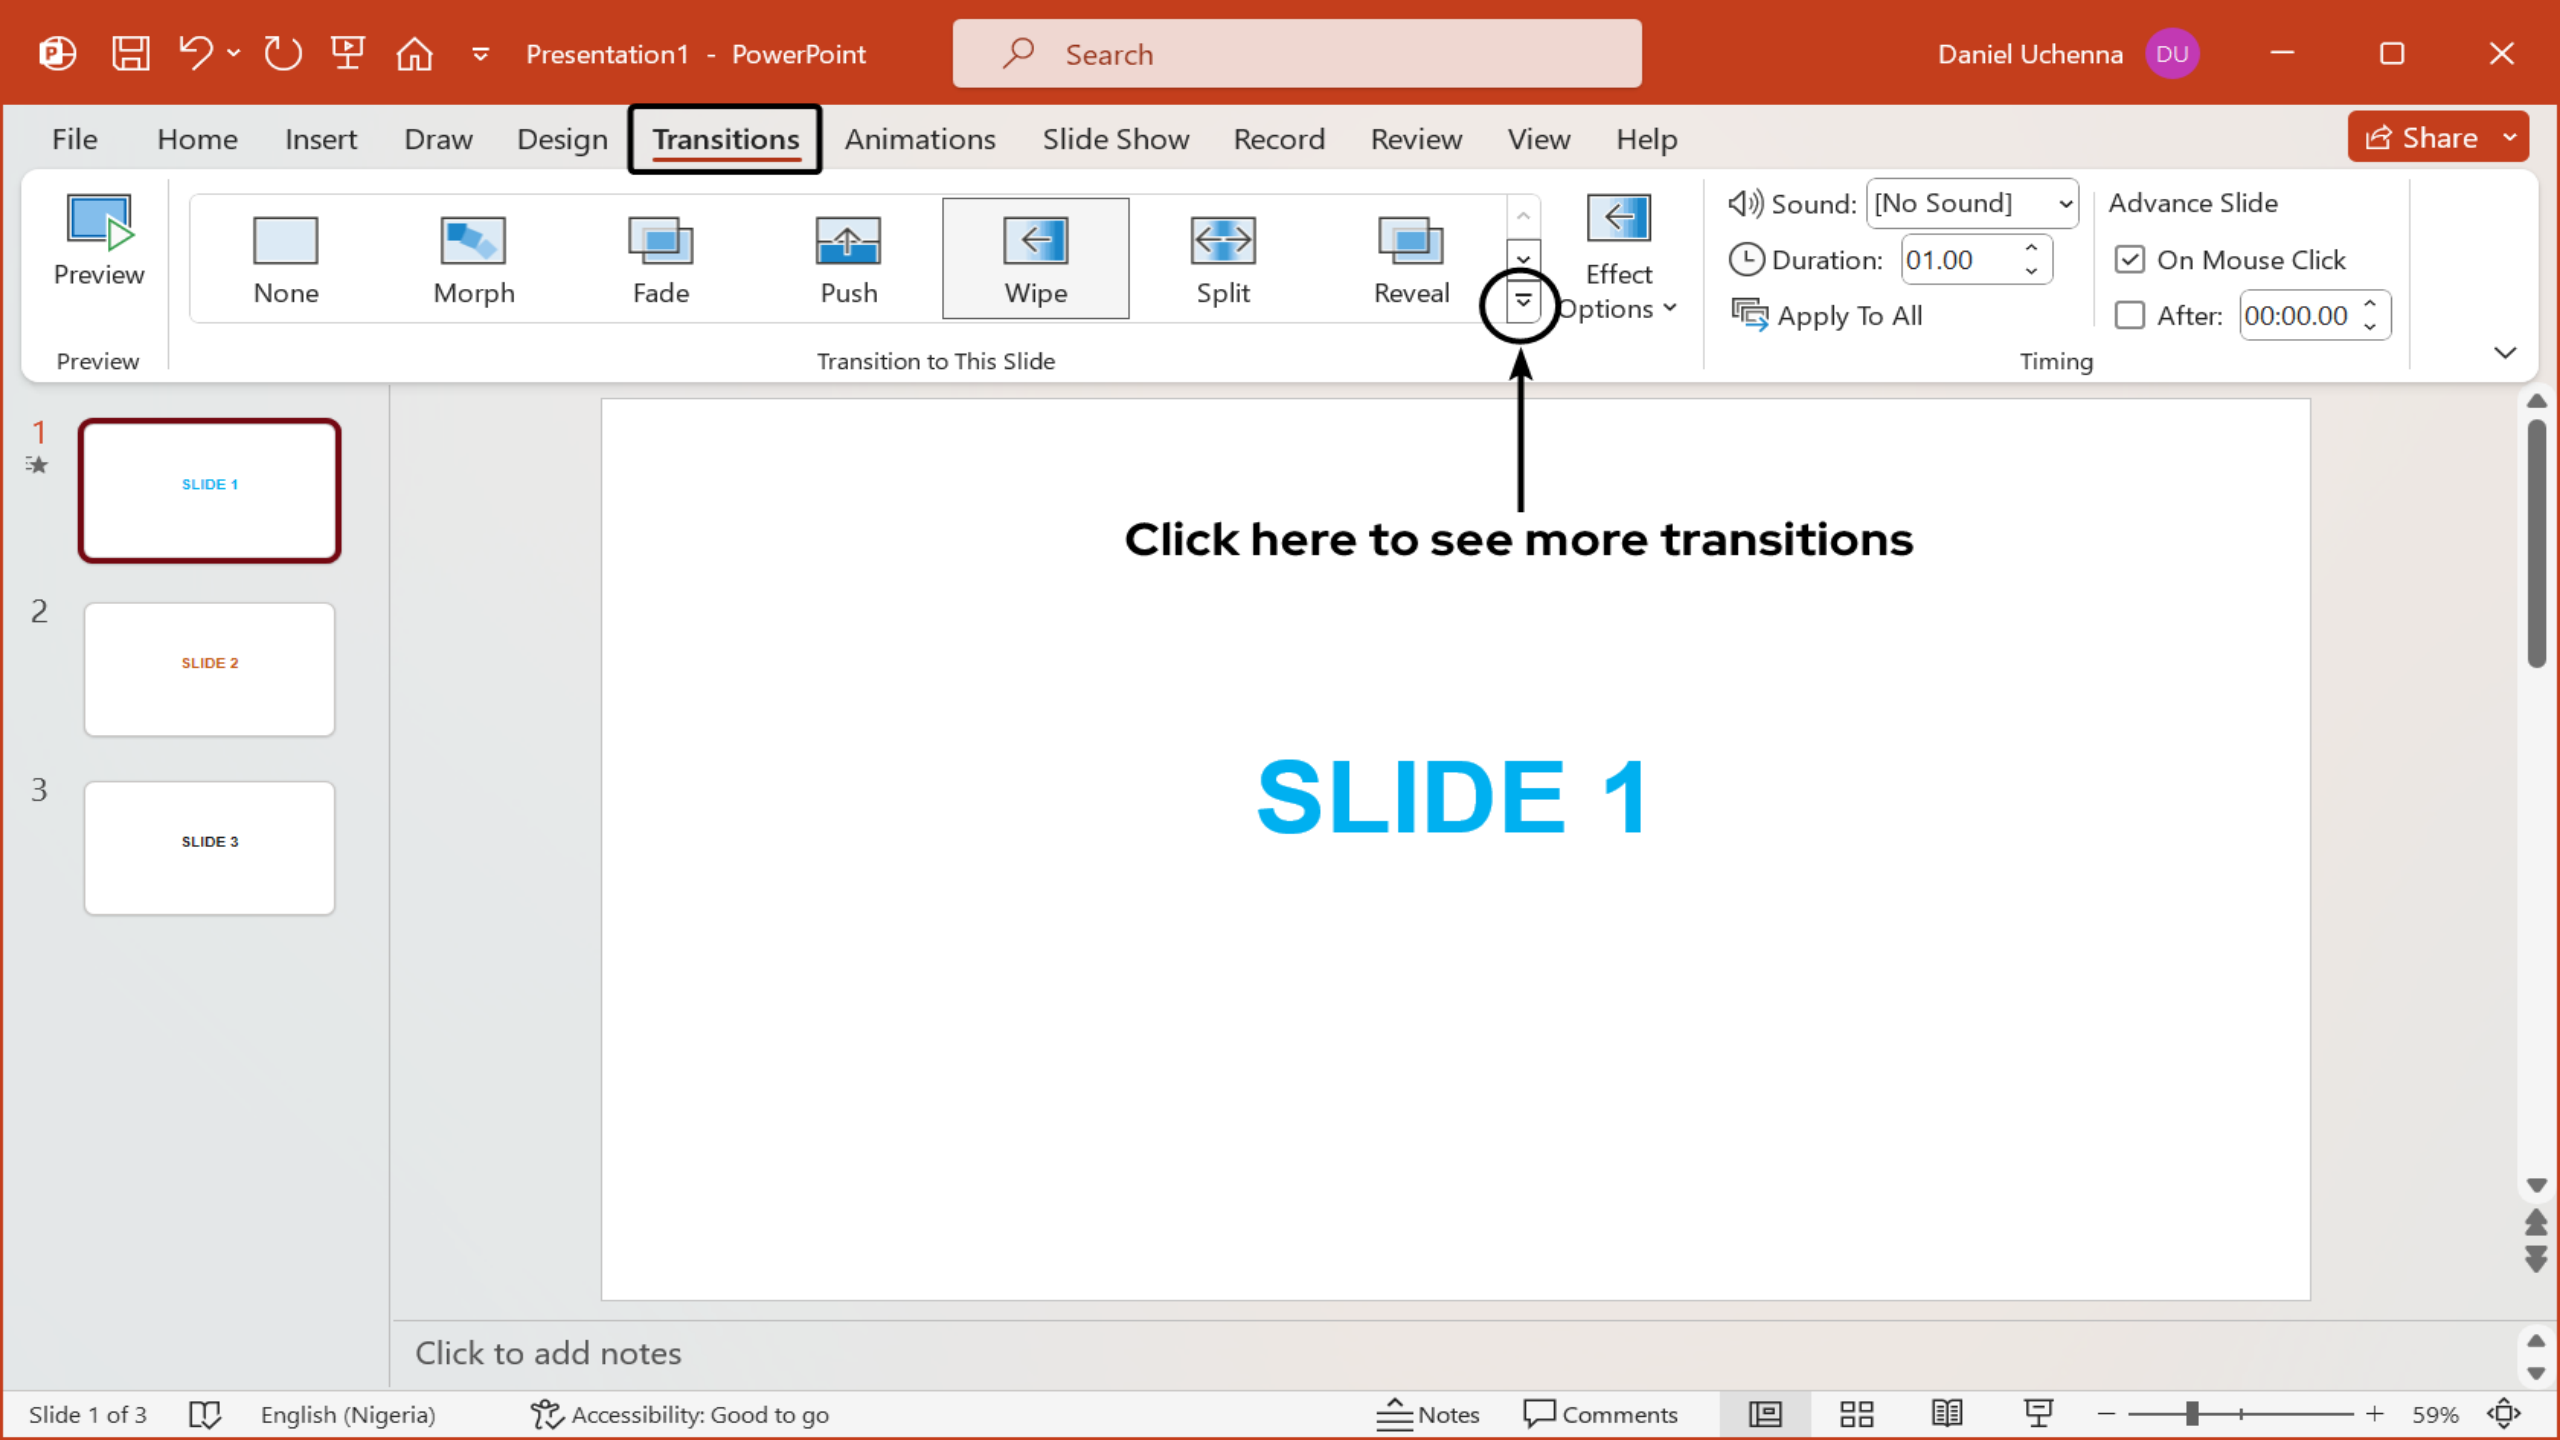

- Transitions are one design item that is unique to PowerPoint.
- Because a slideshow is meant to be active and engaging, and because it may have many slides, one way to keep viewers from having a jolt from immediate slide changes is to program in transitions.
- A transition might take a couple of or a few seconds, provide a 'slide separation' effect, and help keep a show engaging.

Activity 5: Using Transitions

Scenario

Hope has created a presentation about "**Tourist Attractions in Zambia."** The slides change abruptly, making the presentation look less professional.

Activity

- Create three slides.
- Apply different transition effects.
- Change the transition duration and apply sound.
- Preview the slide transitions.

Questions [5 Marks]

1. What is a transition? [1]
2. When does a transition occur? [1]
3. Name one transition effect. [1]
4. Why should transitions be used carefully? [1]
5. How can you apply the same transition to all slides? [1]

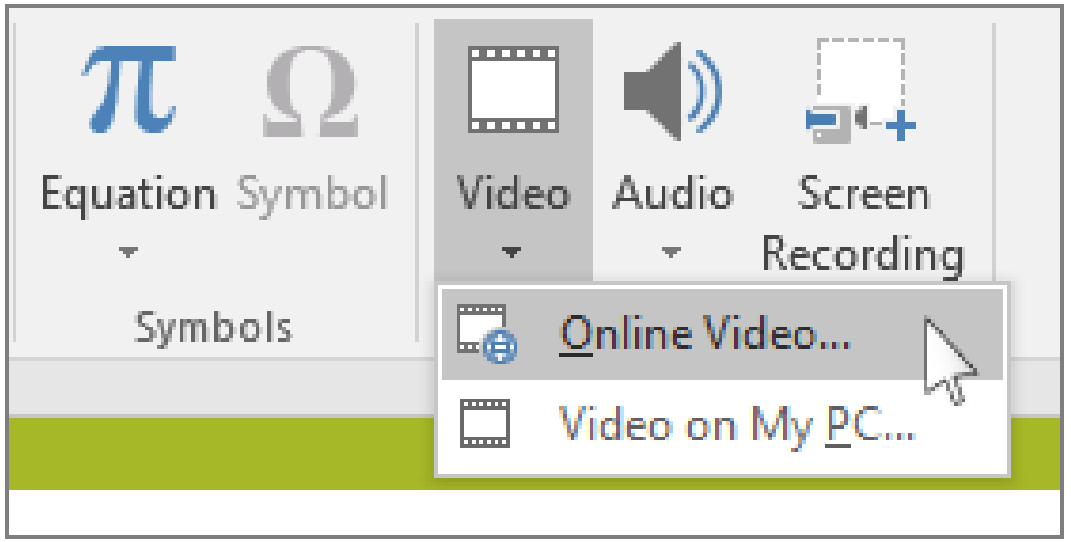

Inserting Multimedia Elements

Multimedia

Multimedia refers to different forms of media used in presentations.

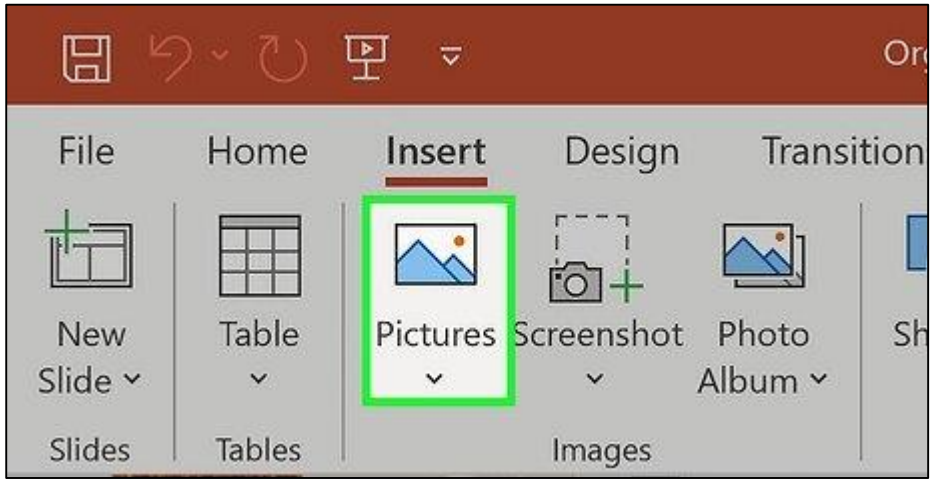

Examples include:

- Pictures
- Audio
- Videos
- Charts
- Animations

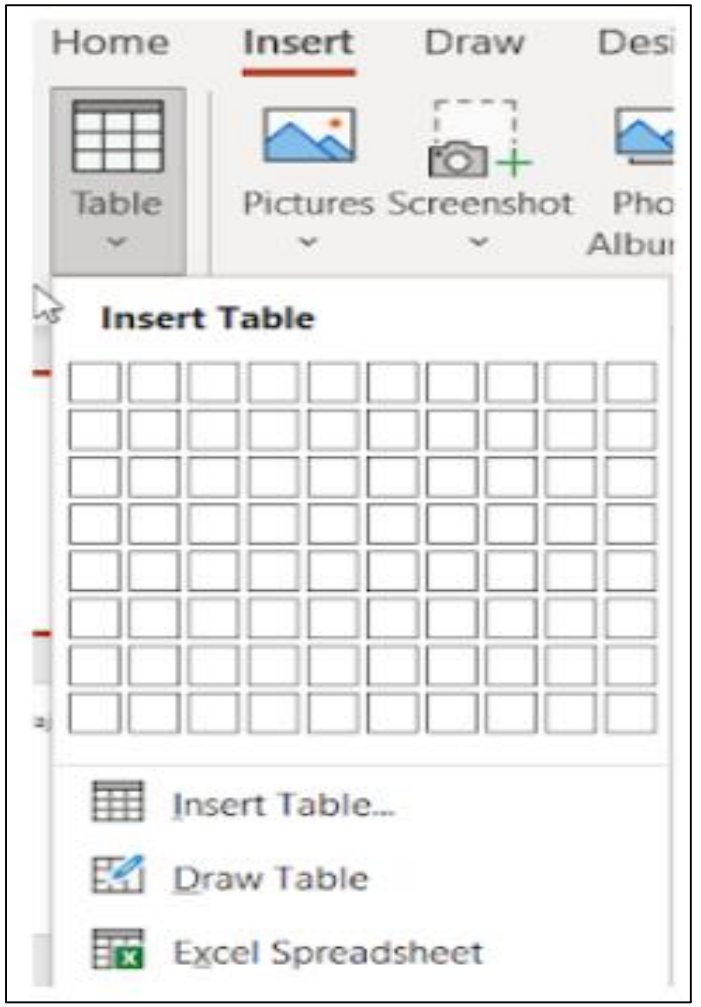

Inserting Objects into a Presentation

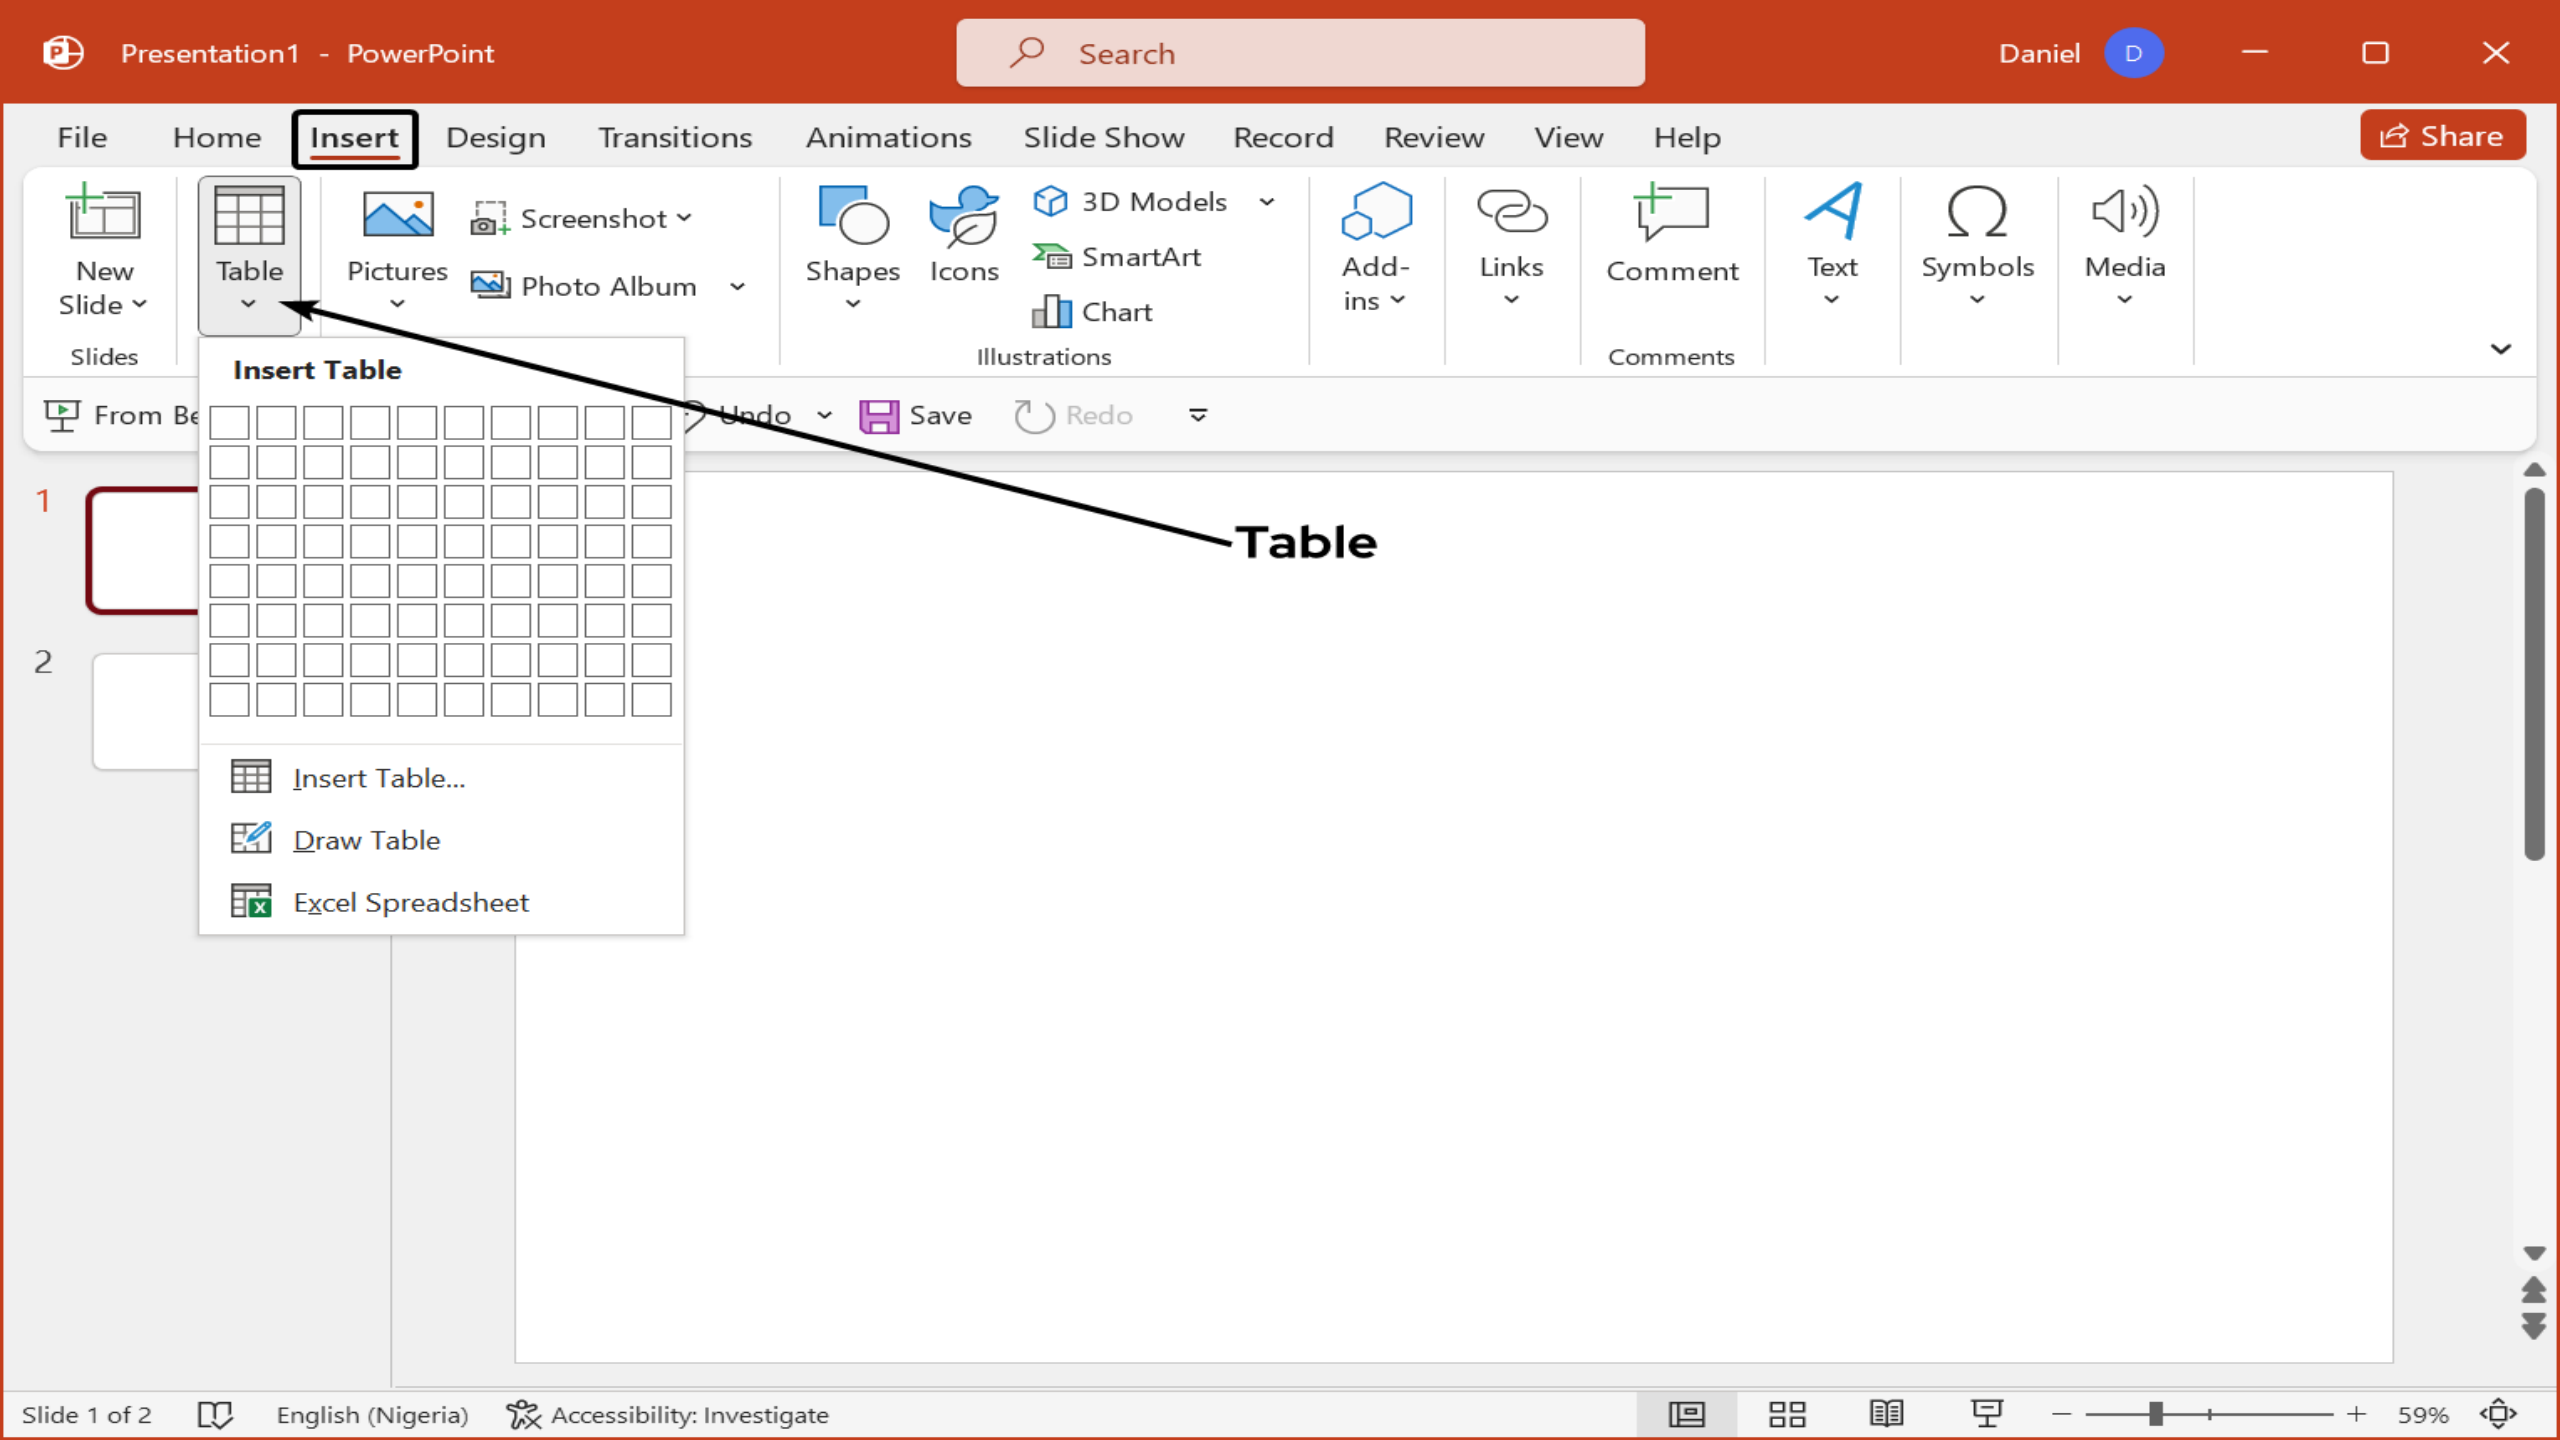

- A good presenter will make use of visual elements, such as charts, graphics, and photographs, in conjunction with text to help communicate the presentation message.
- Visual elements keep the presentation interesting, illustrate concepts, and help the audience focus on what the presenter is saying.

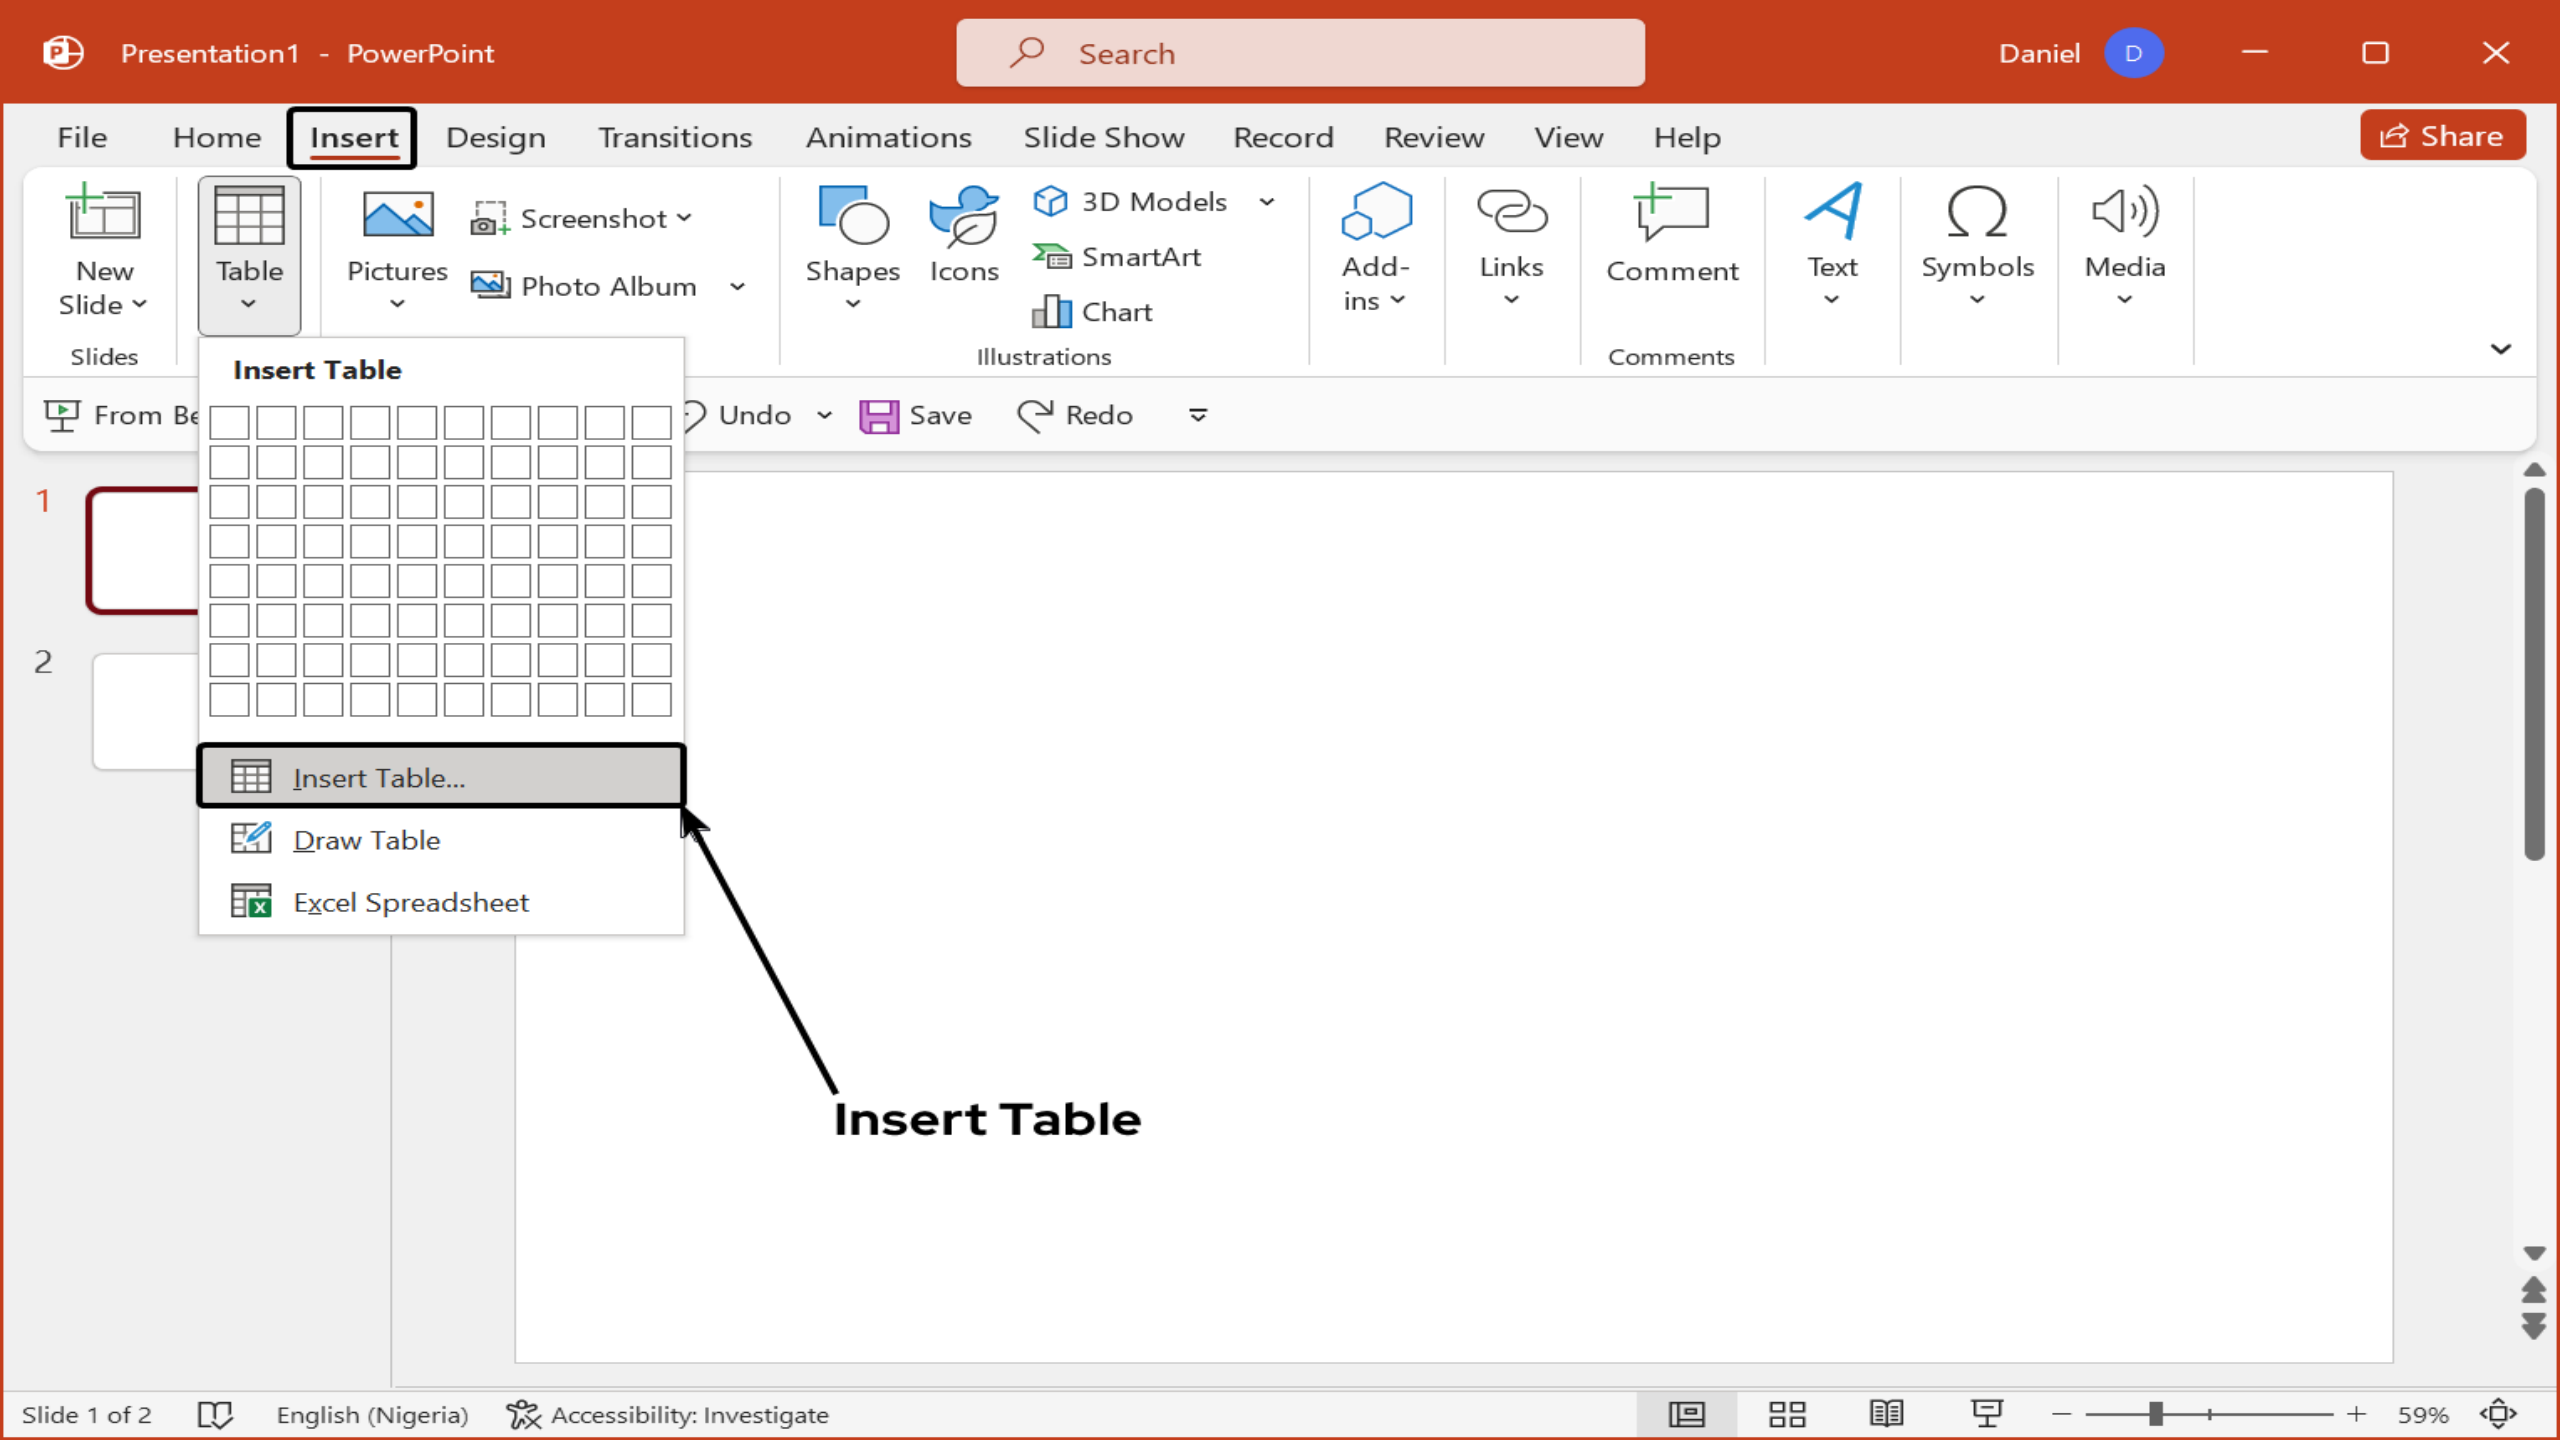

Inserting Tables

- Using the Table feature in presentation is similar to Word. A table includes cells organized in columns and rows. The top row of a table usually contains the titles of the columns and, thus, is called the header row. The bottom row can be considered the total row and can be formatted differently.
- A table can be inserted using the Table menu from the Tables group on the Insert tab . The user can also click on the table icon in the placeholder to create a table.

- As you create your presentation, you may have some information that would look best organized in rows and columns.
- For example, if you wanted to compare the basic details of three different cruise tours side by side, a table is ideal for this type of information.
- Once you have created a table, two new tabs, the Table Tools Design tab and the Table Tools Layout tab, appear on the Ribbon. You can use the Design tab to apply styles, change cell borders, and add cell effects.
- Using the Layout tab, you can add rows and columns to your table, adjust the size of cells, and align text in the cells.

Activity 6: Inserting Tables

Scenario

The class prefect wants to present attendance records for one week during assembly.

Activity

Create a table showing attendance for five days.

Day	Boys	Girls
Monday	25	23
Tuesday	24	24
Wednesday	26	22
Thursday	25	23
Friday	24	24

Inserting a Picture

- In PowerPoint, a picture is defined as a digital photograph, a piece of line art or clip art, or other artwork that is created in another program.
- PowerPoint gives you the ability to insert different types of pictures including JPEG File Interchange Format and BMP Windows Bitmap files into a PowerPoint presentation.
- As with all objects in PowerPoint, you can format and style inserted pictures to help them fit the theme of your presentation.

Importance of Using Pictures in Presentations

- Makes slides more attractive.
- Helps explain information clearly.
- Captures the audience's attention.
- Makes presentations easier to remember.
- Supports learning through visual communication.

Tips for Using Pictures

- Use clear and relevant pictures.
- Avoid overcrowding slides with too many images.
- Ensure pictures are appropriate for the topic.
- Use high-quality images where possible.

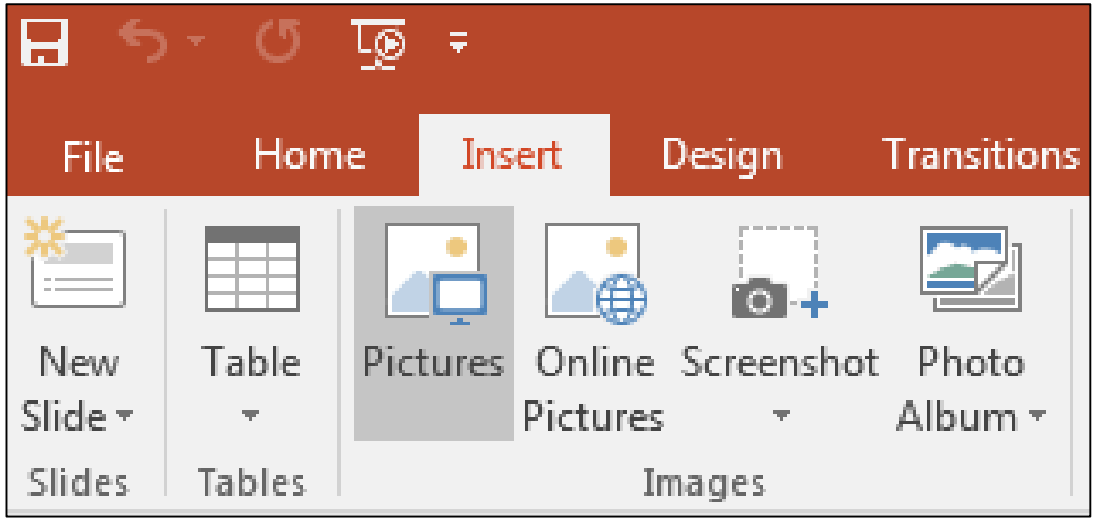

Key Words

- **Picture** – An image inserted into a slide.
- **Insert** – To add an object to a slide.
- **Resize** – To change the size of an object.
- **Crop** – To remove unwanted parts of a picture.
- **Format** – To change the appearance of an object.

- Pictures make presentations more attractive, interesting, and easier to understand. They help the audience visualize information and remember important points.
- Pictures can be inserted into slides to support the message being presented.

Steps for Inserting a Picture in a Presentation

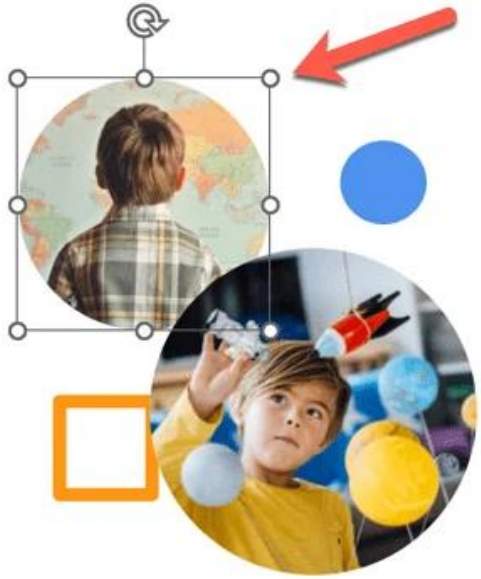

1. Open your presentation.
2. Select the slide where you want to insert the picture.
3. Click the **Insert** tab on the Ribbon.
4. Click **Pictures**.
5. Choose the location of the picture:
   - **This Device** (from the computer)
   - **Online Pictures** (from the internet, if available)
6. Browse and select the picture you want.
7. Click Insert.
8. The picture will appear on the slide.

Resizing a Picture

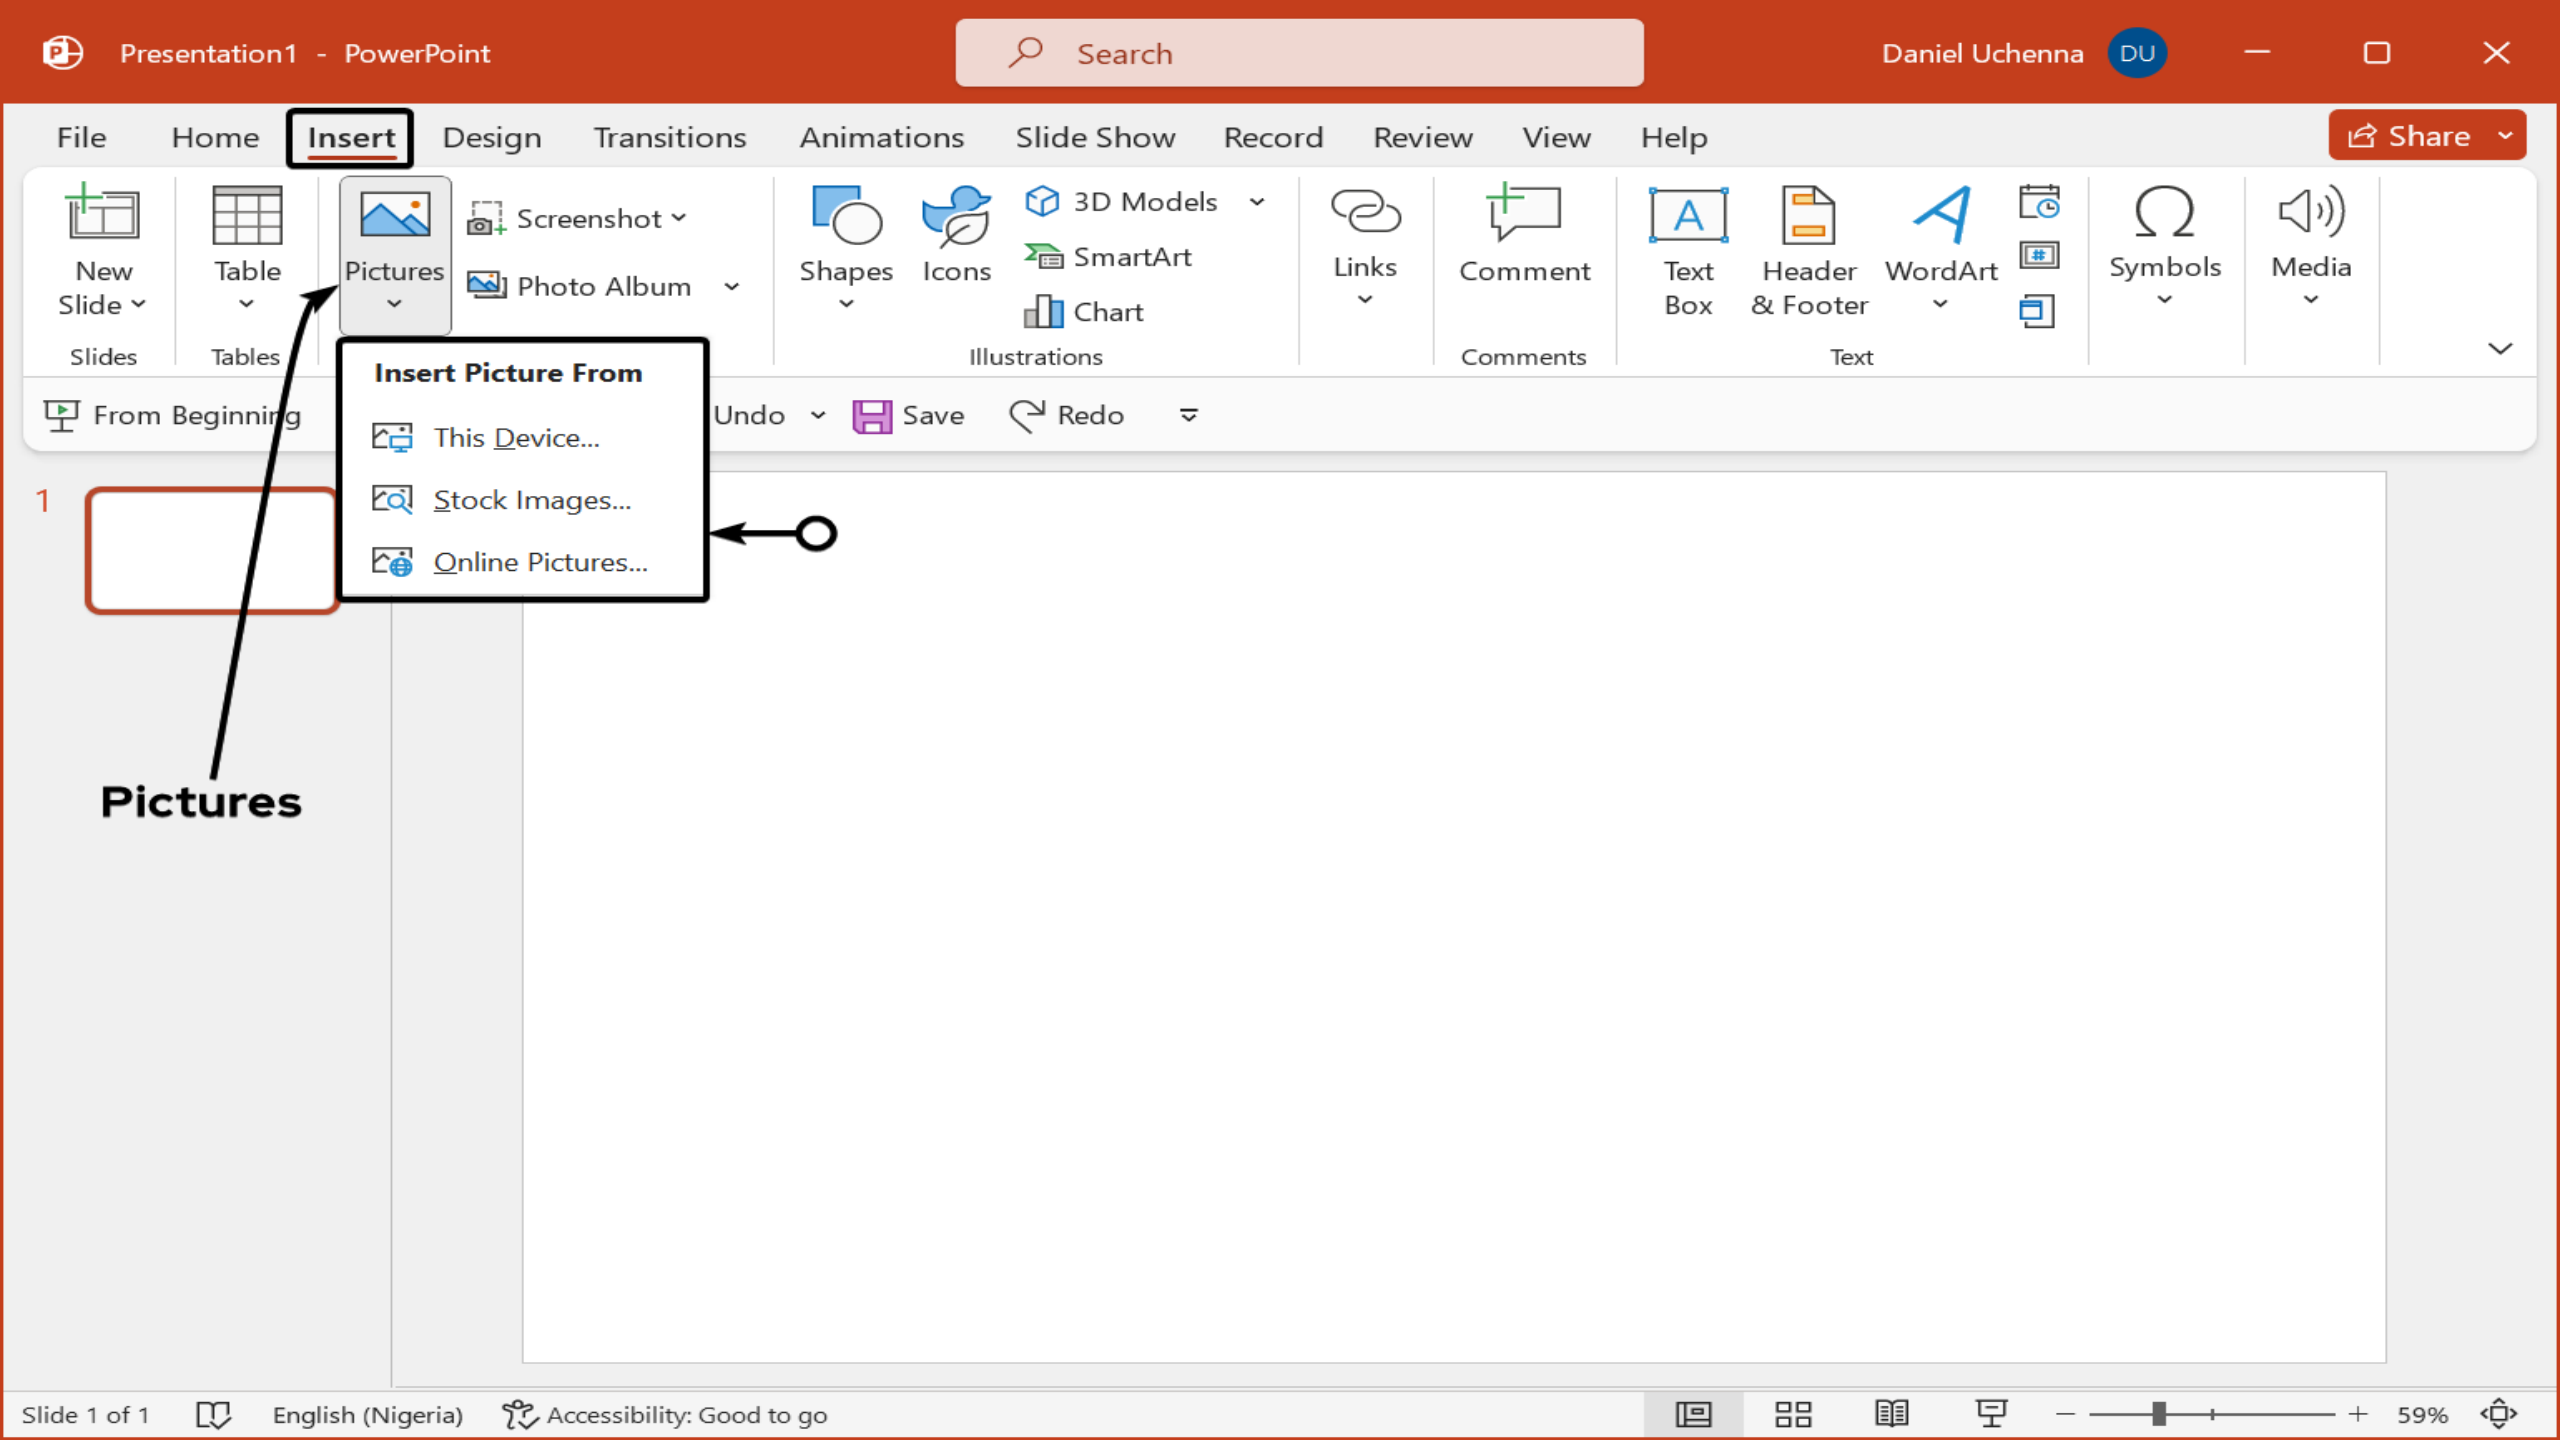

After inserting a picture:

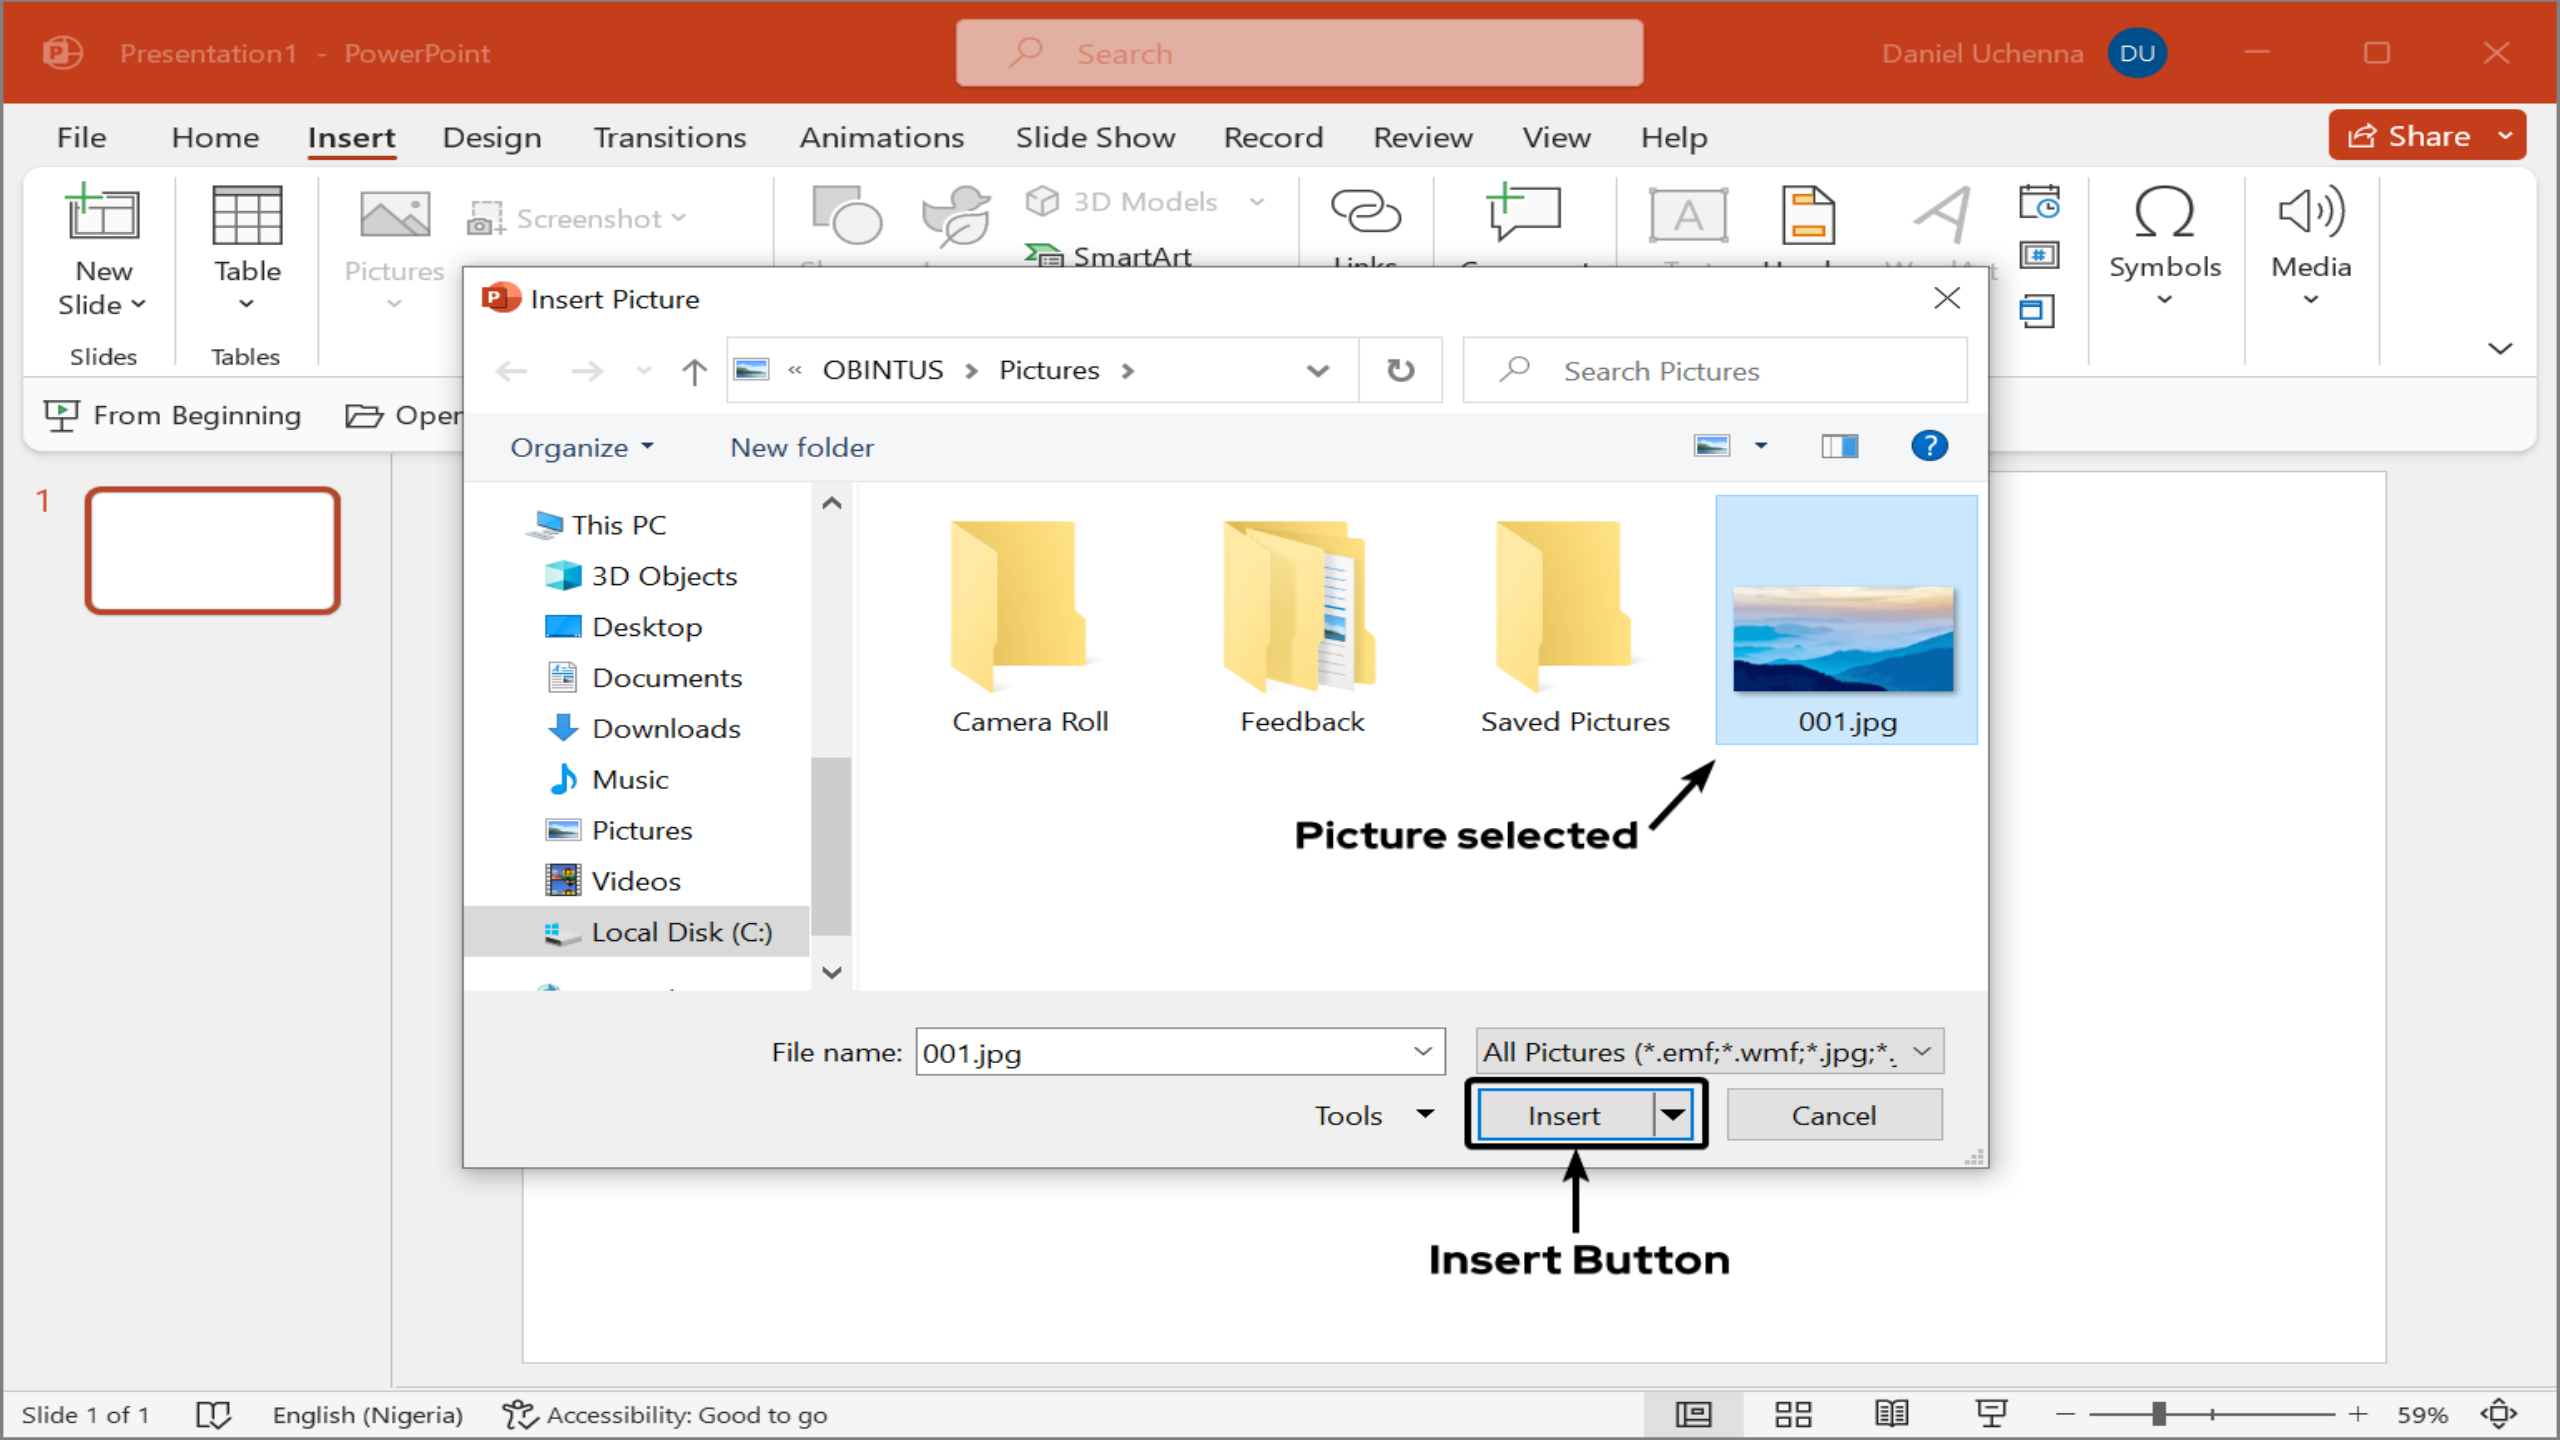

1. Click on the picture.
2. Drag the corner sizing handles inward to make it smaller.
3. Drag the corner sizing handles outward to make it larger.

Moving a Picture

1. Click on the picture.
2. Hold down the left mouse button.
3. Drag the picture to the desired position on the slide.

Formatting a Picture

You can improve the appearance of a picture by:

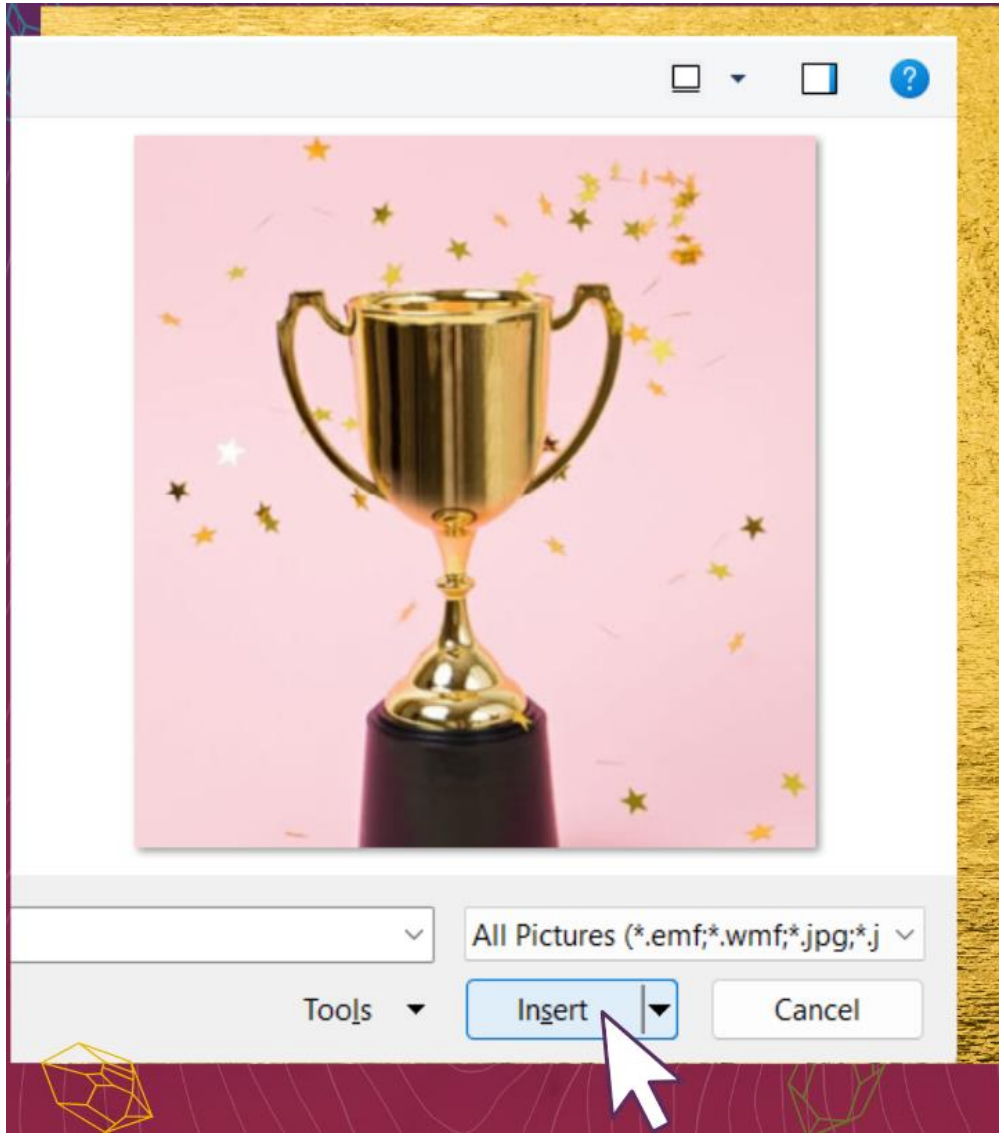

- Adding a border.
- Applying picture styles.
- Adjusting brightness and contrast.
- Cropping unwanted parts of the image.
- Adding artistic effects.

1. Choose the photo you want to add to your PowerPoint slide.

2. Once the image is inserted into the slide, click the image to find the tabs on the corners and edges of the photo.

3. Drag the tabs to make the image larger or smaller depending on your design needs.

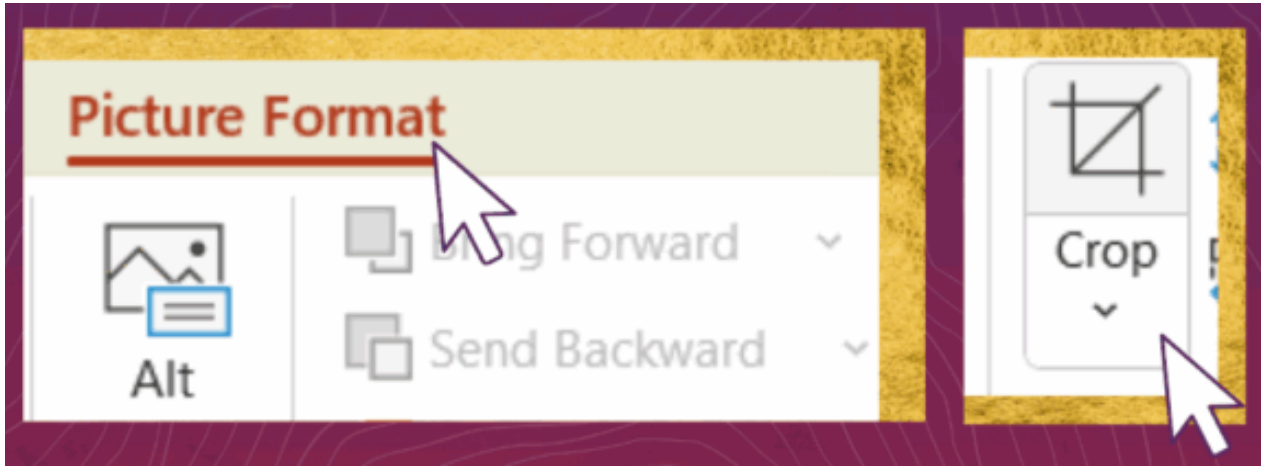

How to crop photos

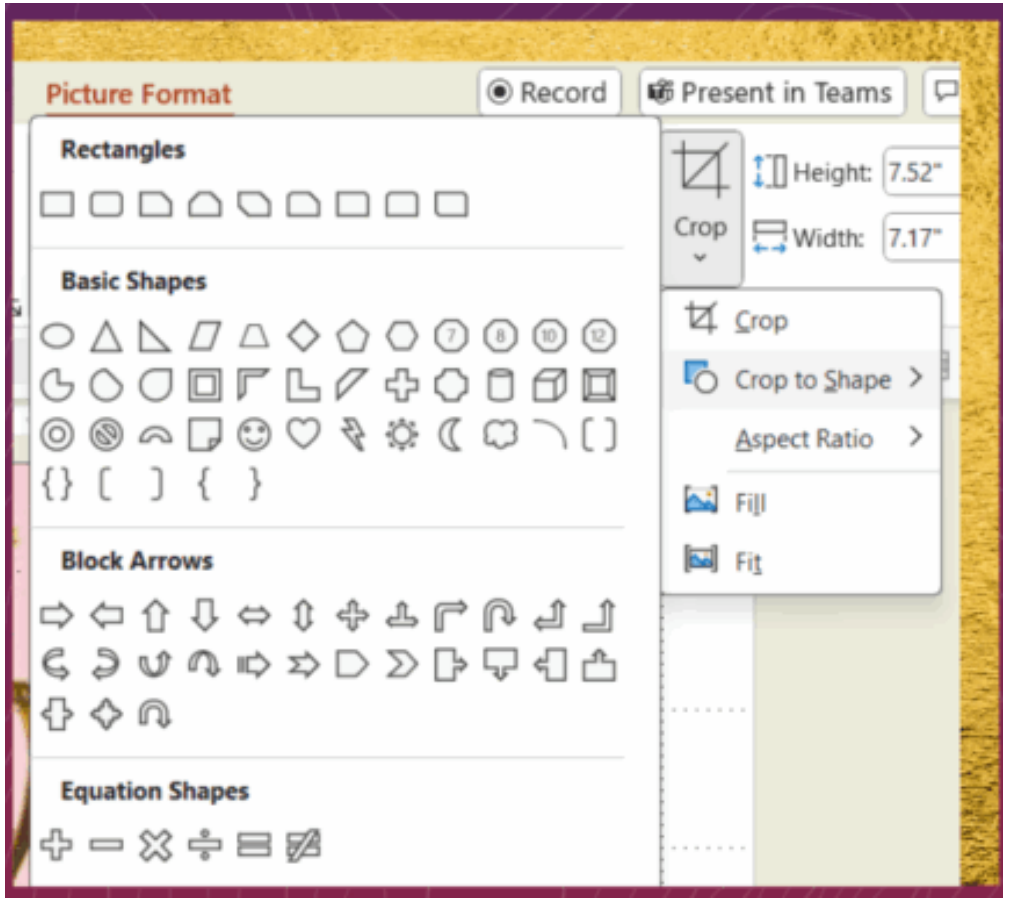

1. Click the image you would like to crop.

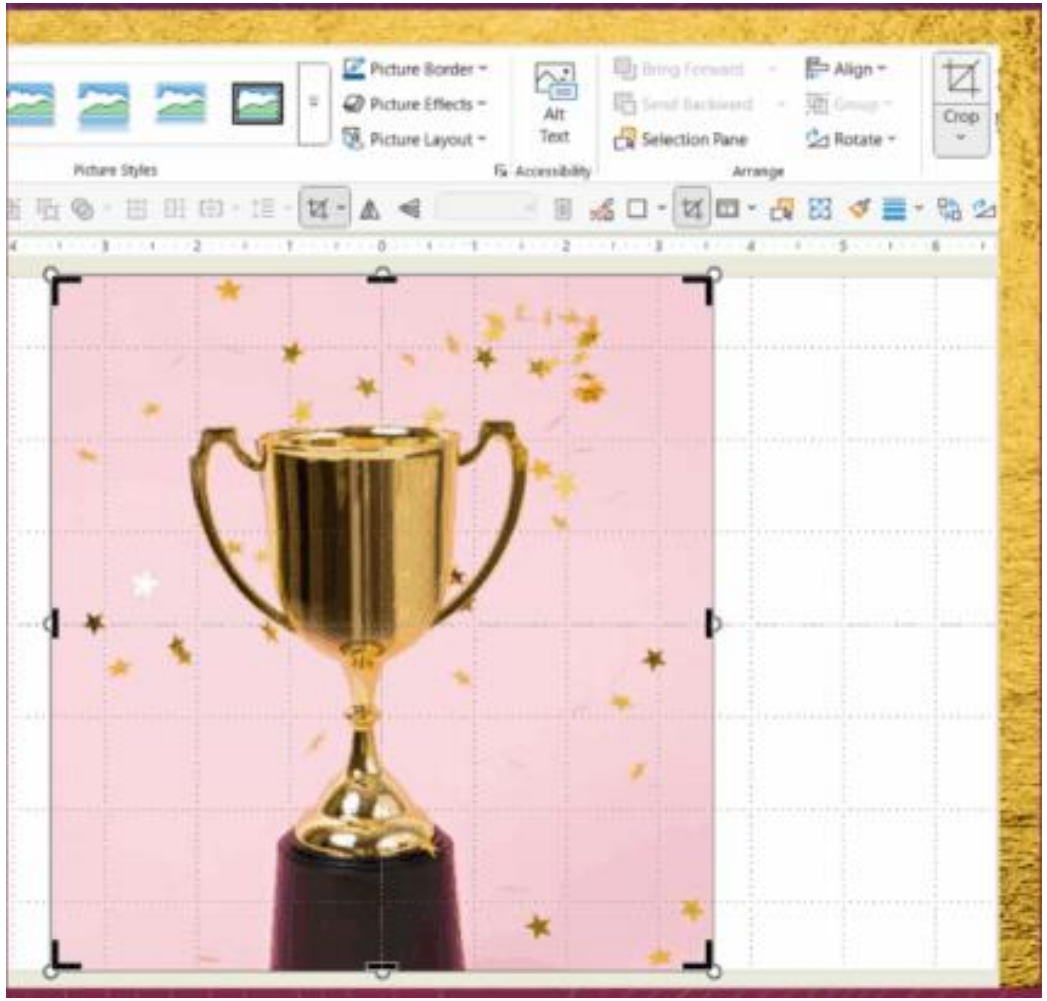

2. Click “Picture Format” in the navigational menu, then locate the cropping section.

3. Define the shape height and width you’d like your photo to adhere to OR click the down arrow under the word “Crop” to open manual cropping, crop-by-shape, and aspect ratio* tools.

4. If you choose to manually crop your image, you can use the black handles on the corners and edges to adjust to crop any unwanted items, space, or distractions from your photo.

Activity 7: Inserting Pictures

Scenario

Faith is preparing a presentation on "**Wild Animals of Zambia**." The presentation contains only text and looks uninteresting.

Activity

- Insert at least three pictures of wild animals.
- Resize the pictures.
- Arrange them neatly on the slide.

Questions [5 Marks]

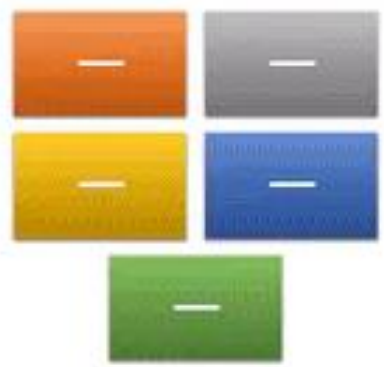

1. Why are pictures used in presentations? [1]
2. Which tab is used to insert pictures? [1]
3. How can a picture be resized? [1]
4. Give one advantage of using pictures. [1]
5. What should be considered when choosing pictures for a presentation? [1]

Inserting SmartArt Graphics

- SmartArt is a feature in Microsoft PowerPoint that allows users to create visual diagrams and graphics to present information clearly and attractively. SmartArt helps organize ideas, processes, relationships, and hierarchies in an easy-to-understand format.

What is SmartArt?

SmartArt is a collection of ready-made graphical diagrams used to visually represent information in a presentation.

Importance of SmartArt

SmartArt helps to:

- Present information clearly.
- Organize ideas and concepts.
- Improve the appearance of presentations.
- Make presentations more interesting and engaging.

Types of SmartArt Graphics

List

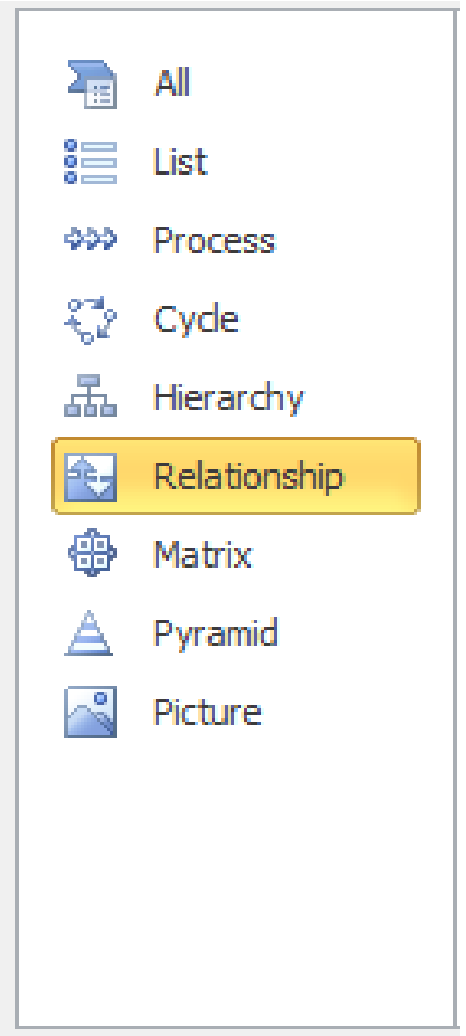

Used to display non-sequential information.

Example: School rules.

Process

Used to show steps in a process.

Example: Steps for creating a PowerPoint presentation.

Cycle

Used to show a repeating process.

Example: Water cycle.

Hierarchy

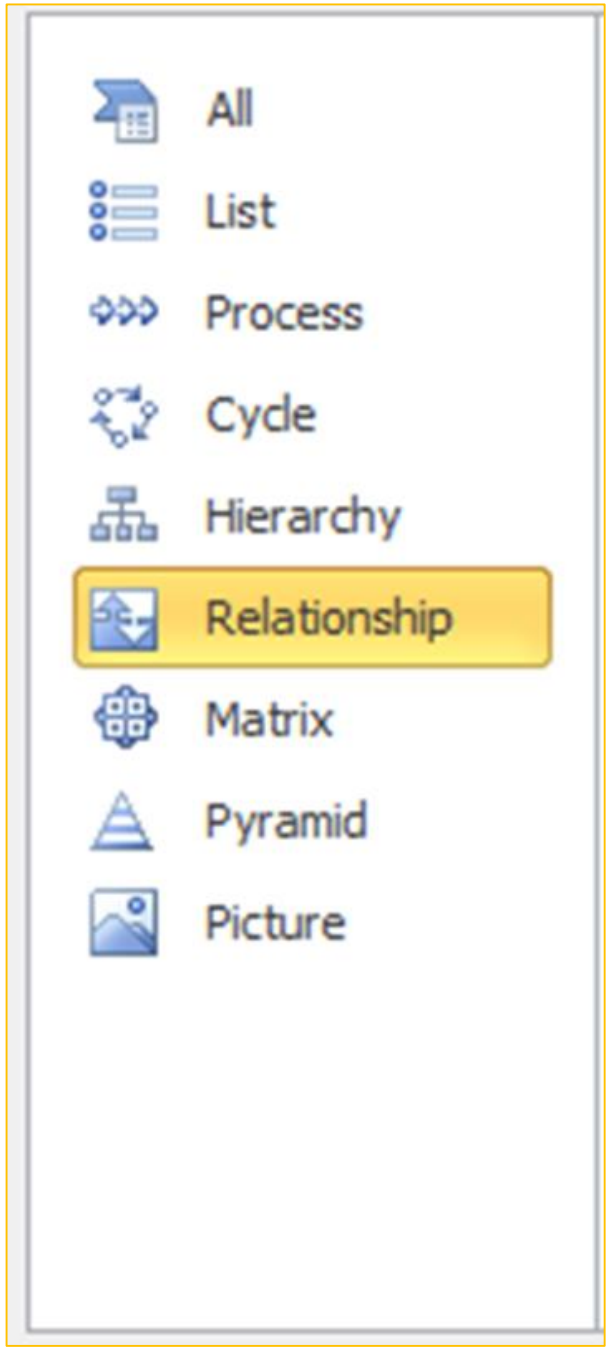

Used to show levels of authority or organization.

Example: School administration structure.

Relationship

Used to show how ideas or objects are connected.

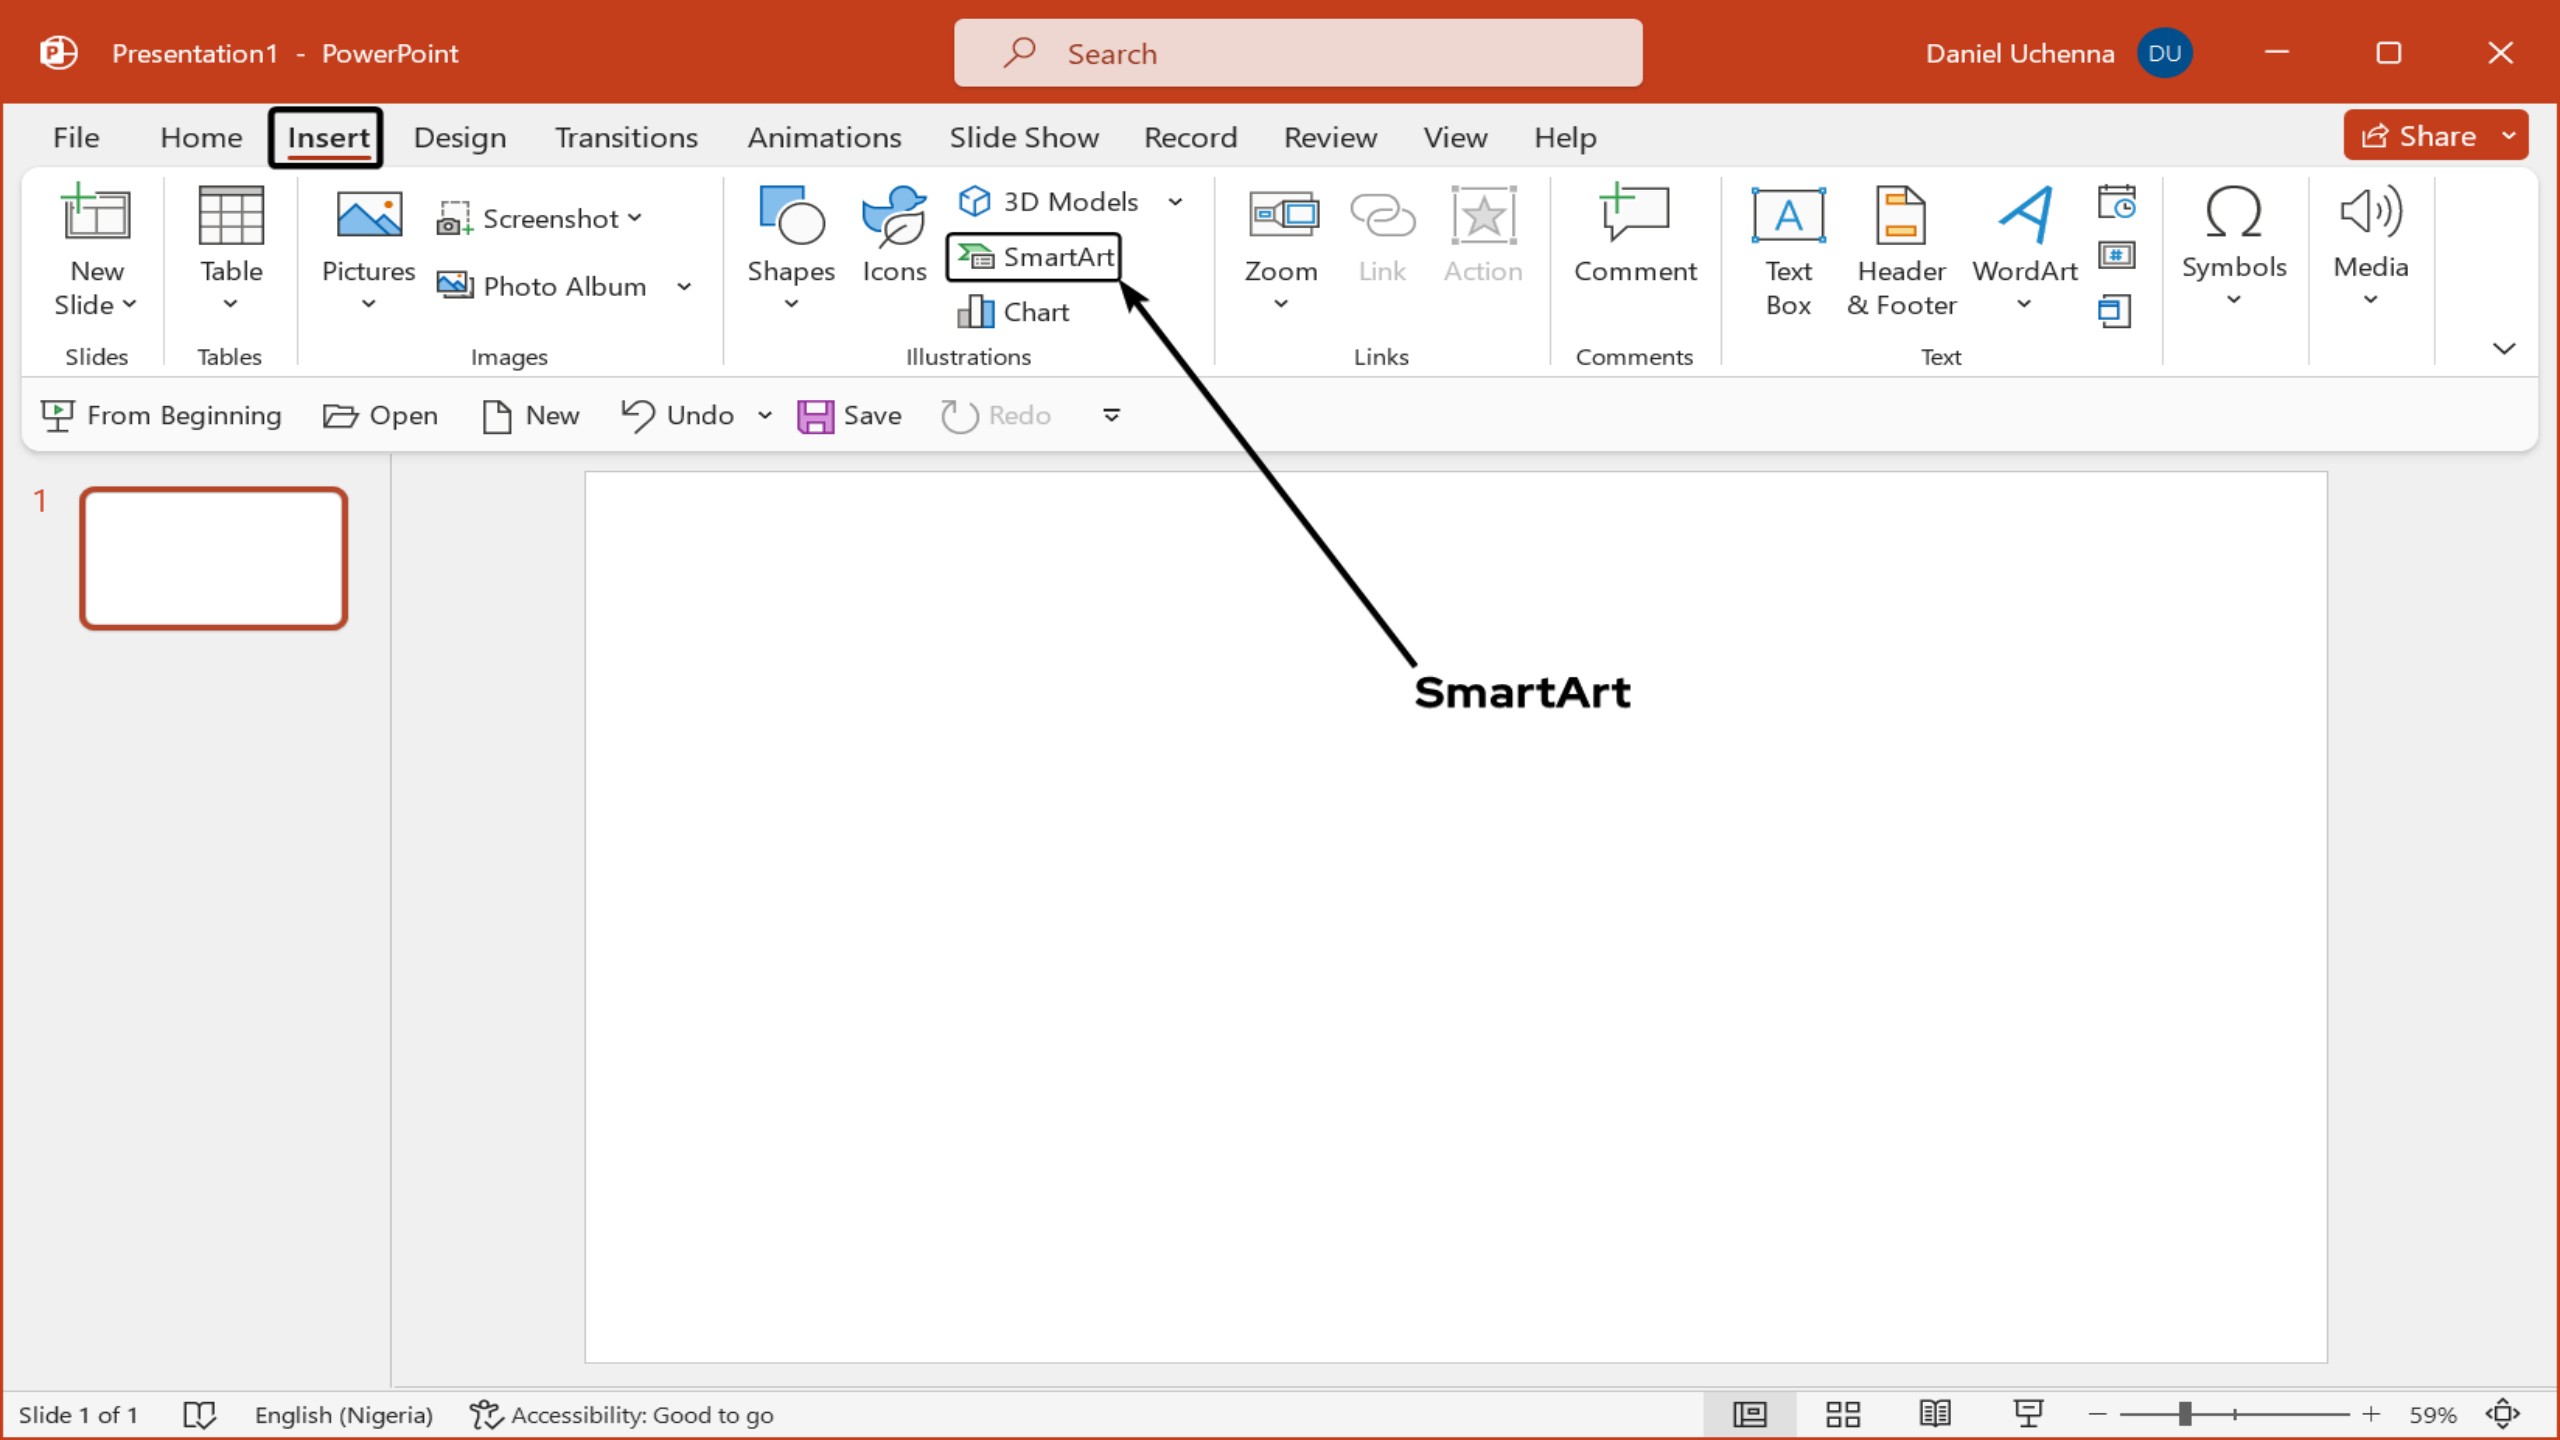

Example: Relationship between computer hardware and software.

Steps for Inserting SmartArt

1. Open Microsoft PowerPoint.
2. Select the slide where you want to insert SmartArt.
3. Click the **Insert** tab.
4. Click **SmartArt** in the Illustrations group.
5. Select a SmartArt category.
6. Choose a SmartArt design.
7. Click **OK**.
8. Type your information into the SmartArt text pane.

Editing SmartArt

After inserting SmartArt, you can:

- Add more shapes.
- Delete unwanted shapes.
- Change colours.
- Apply different SmartArt styles.
- Resize and reposition the SmartArt graphic.

Guidelines for Using SmartArt

- Use simple and clear text.
- Choose the correct SmartArt type for the information.
- Avoid overcrowding with too much information.
- Use appropriate colours and styles.
- Ensure the SmartArt is easy to read.

Activity 8: SmartArt Graphics

Create a PowerPoint slide showing the Steps of Planting a Tree using a Process SmartArt.
Steps:

- Dig a hole.
- Place the seedling.
- Cover with soil.
- Water the plant.

Format the SmartArt and save your presentation.

Scenario-Based Task

Situation

Your school is conducting elections for the Student Representative Council (SRC). The teacher wants learners to show the leadership structure using SmartArt.

Task

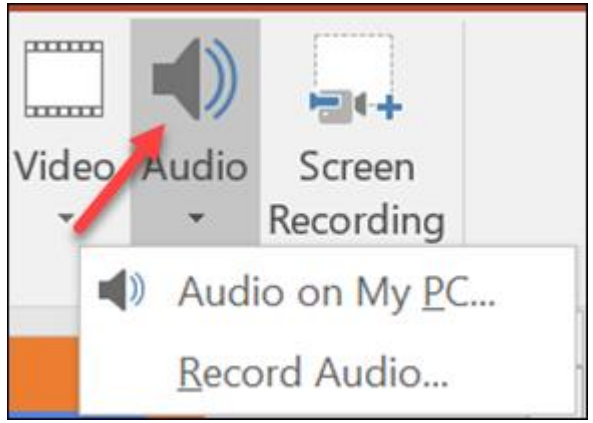

1. Create a PowerPoint presentation titled "School Leadership Structure".
2. Insert a Hierarchy SmartArt graphic.
3. Include the following positions:
   - Head Teacher
   - Deputy Head Teacher
   - HOD
   - Head boy
   - Class Prefects
4. Format the SmartArt neatly.
5. Save and present your work.

Inserting Audio in a Presentation

- Audio can be added to a presentation to make it more interesting and engaging. Audio may include music, narration, sound effects, or recorded speech.
- It helps presenters explain information more effectively and capture the audience's attention.

What is Audio?

Audio is any sound that can be heard through speakers or headphones. Examples include music, recorded voices, and sound effects.

Uses of Audio in Presentations

- Adding background music.
- Recording narration for slides.
- Providing instructions or explanations.
- Making presentations more interactive and engaging.

Advantages of Using Audio in Presentations

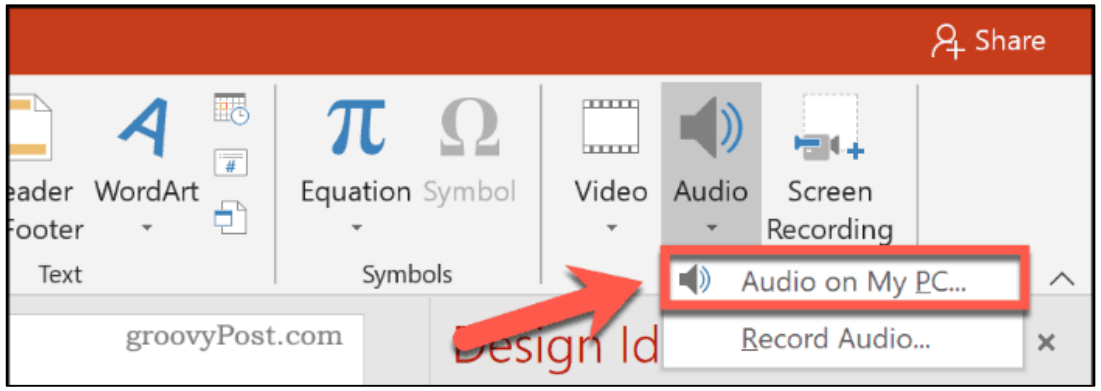

- Makes presentations more engaging.
- Improves audience attention.
- Helps explain information clearly.
- Supports learners who learn better through listening.

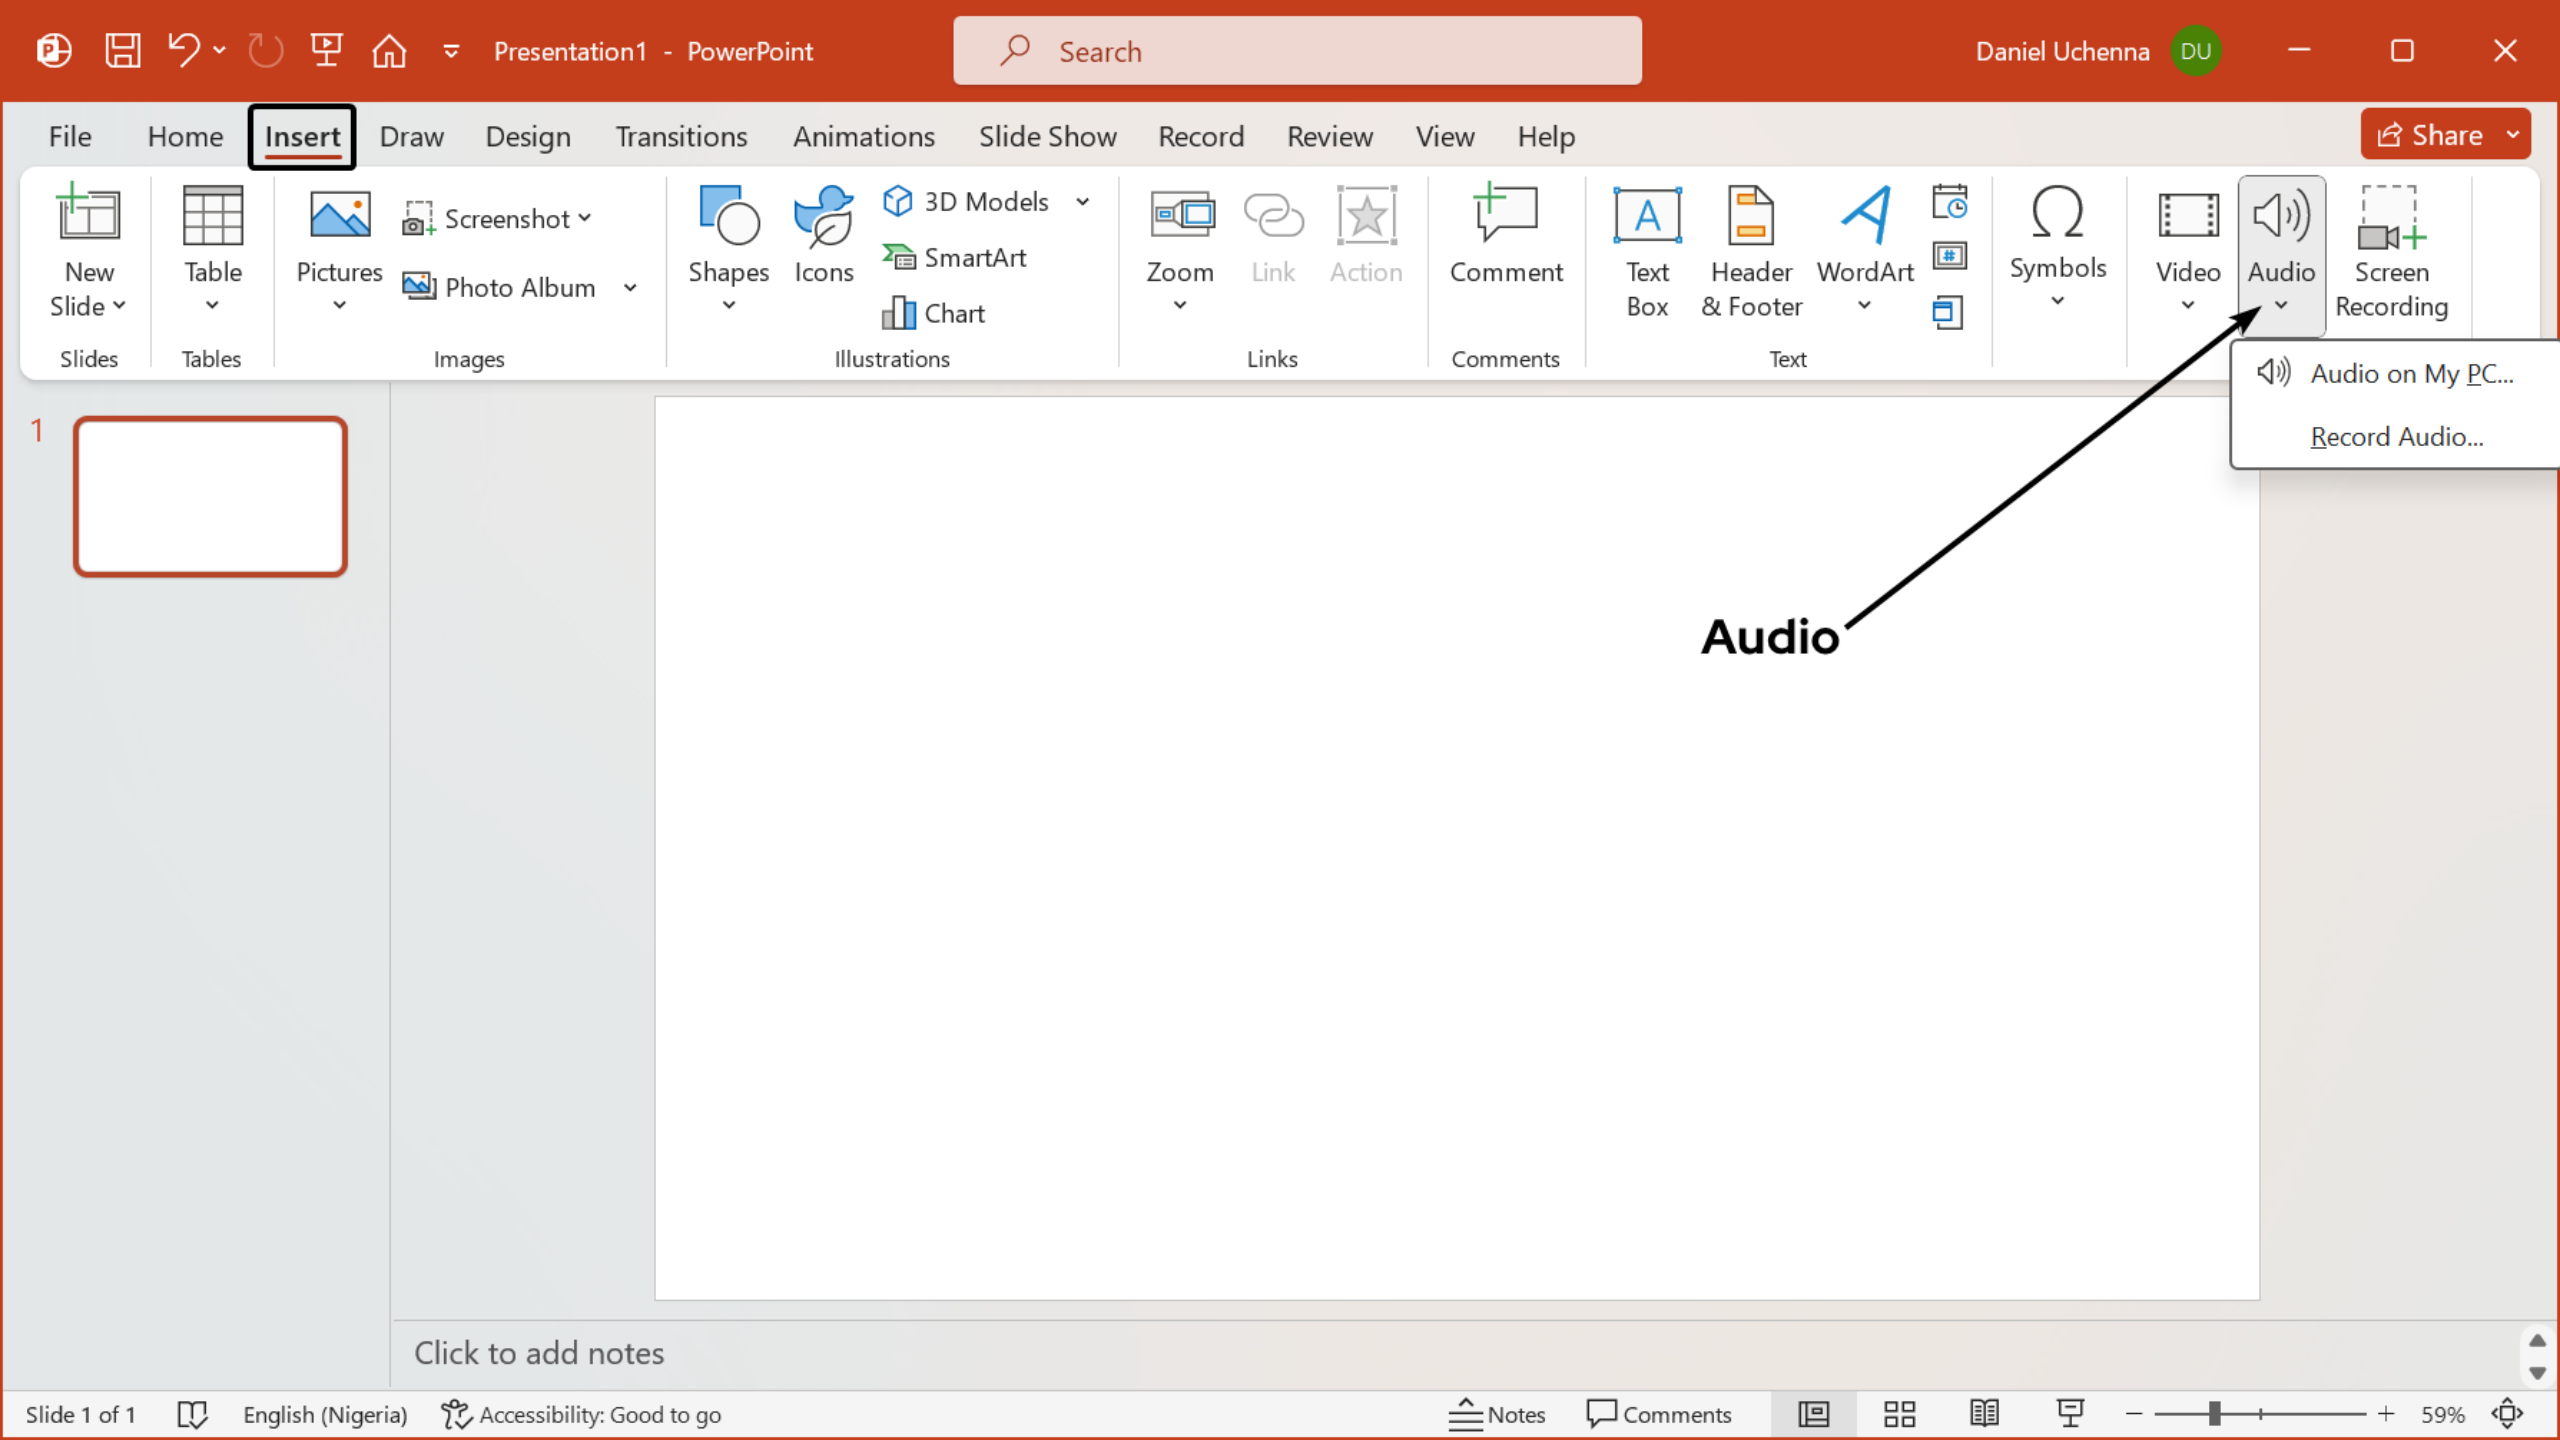

Steps for Inserting Audio in a Presentation

1. Open Microsoft PowerPoint.
2. Select the slide where you want to add audio.
3. Click the **Insert** tab.
4. In the **Media** group, click **Audio**.
5. Select **Audio on My PC** or **This Device**.
6. Browse and select the audio file.
7. Click **Insert**.
8. An audio icon will appear on the slide.

Playing Audio

1. Click the audio icon.
2. Select the Playback tab.
3. Click **Play** to preview the audio.

Audio Playback Options

Automatically

Audio starts playing as soon as the slide appears.

On Click

Audio plays only when the audio icon is clicked.

Play Across Slides

Audio continues playing while moving from one slide to another.

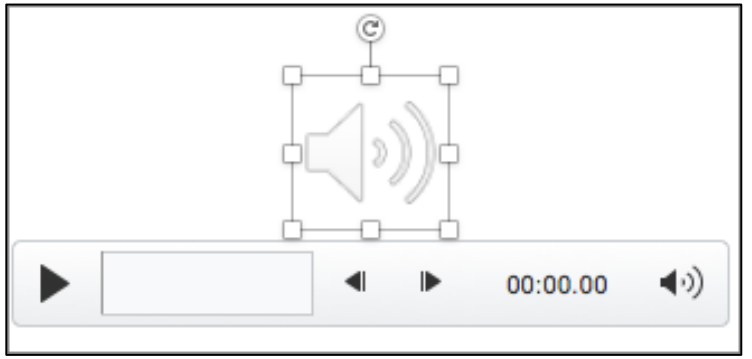

Loop Until Stopped

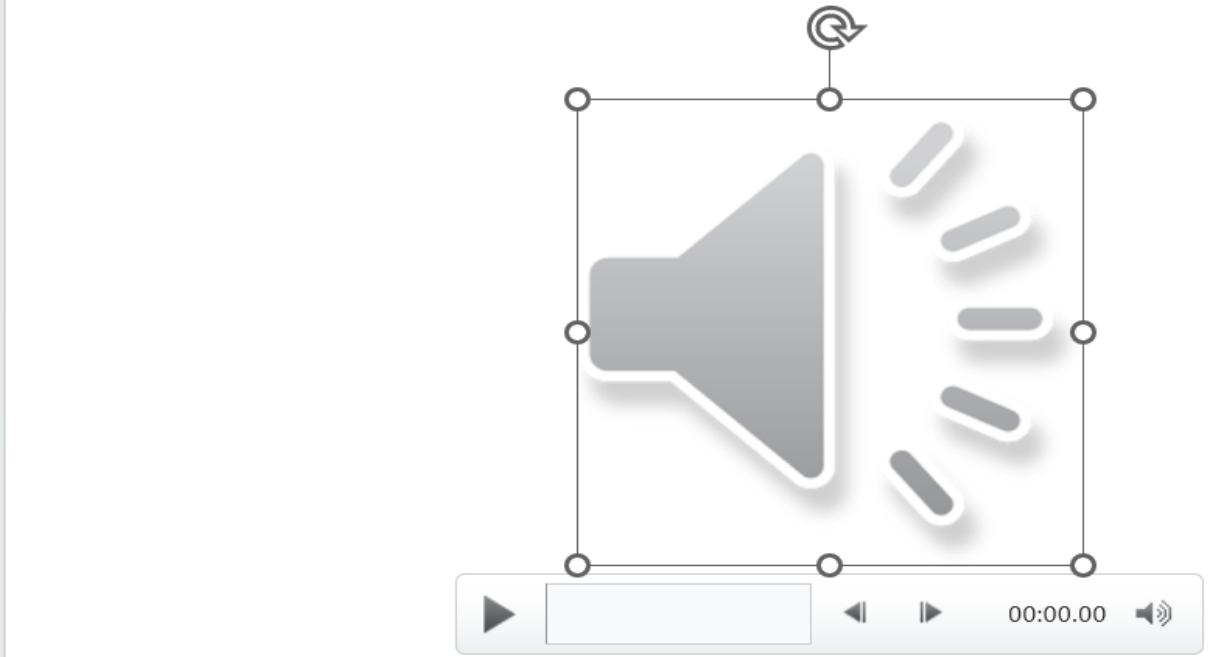

Audio repeats continuously until stopped.

Editing Audio

We can:

- Adjust the volume.
- Trim unwanted sections.
- Change playback settings.
- Move the audio icon to a suitable position on the slide.

Click to add notes

Activity 9: Inserting Audio

Scenario

The Music Club is creating a presentation about traditional songs and wants to include an audio recording.

Activity

- Insert an audio file into a slide.
- Test the audio.
- Set it to play automatically or when clicked.

Questions [5 Marks]

1. What is audio? [1]
2. Why can audio improve a presentation? [1]
3. Which tab is used to insert audio? [1]
4. Name one type of audio file. [1]
5. What should you do after inserting audio? [1]

Inserting Videos

- Videos make presentations more interesting, engaging, and easier to understand. A video can be used to demonstrate a process, explain a concept, or provide additional information to the audience. Microsoft PowerPoint allows users to insert videos directly into slides.

What is a Video?

A video is a digital recording of moving images, often accompanied by sound, used to communicate information or entertainment.

Advantages of Using Videos in Presentations

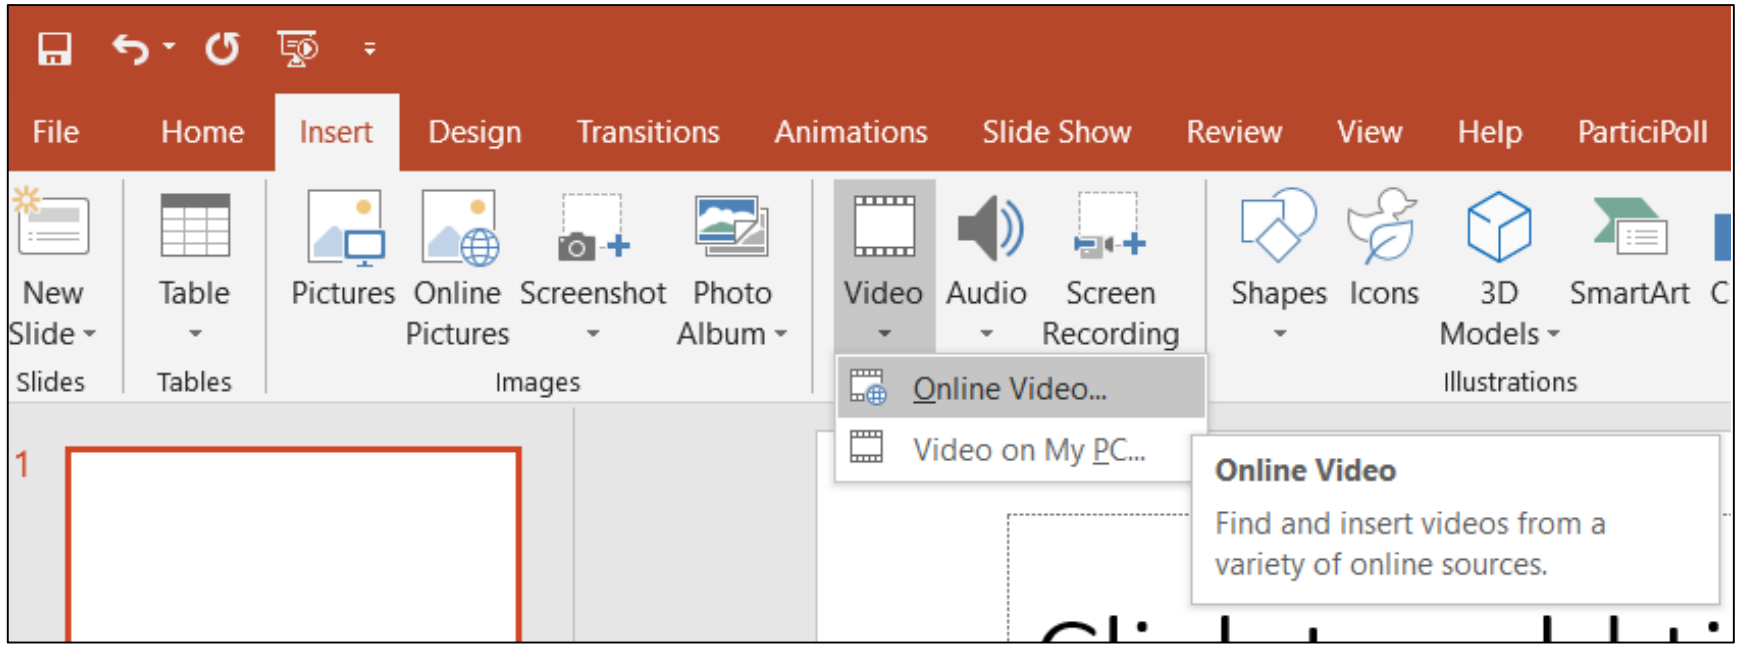

- Improves understanding.
- Increases learner interest.
- Demonstrates real-life situations.
- Makes presentations more professional.

Videos help make presentations more engaging and informative. PowerPoint allows users to insert, resize, edit, and play videos to enhance communication and improve audience understanding.

Uses of Videos in Presentations

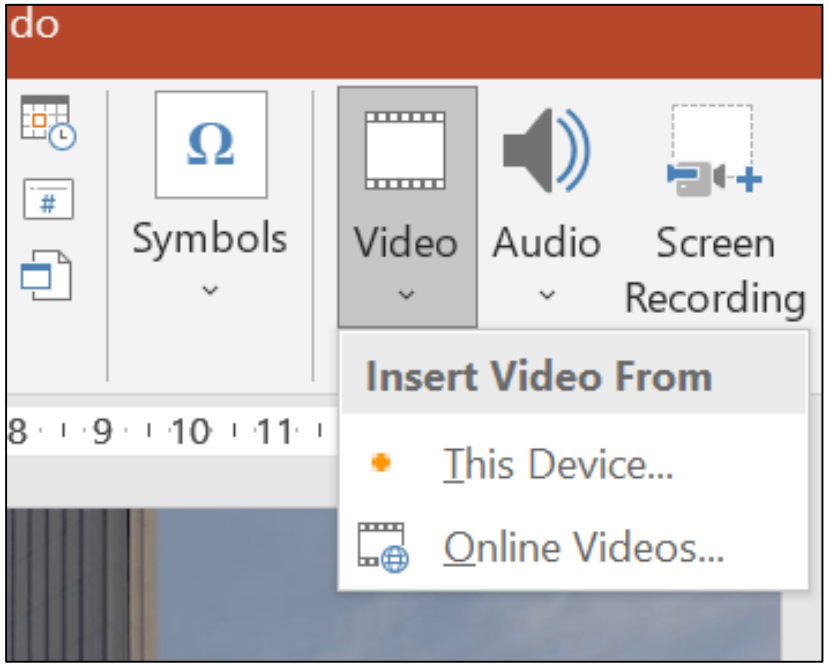

- Explaining concepts more clearly.
- Demonstrating practical activities.
- Capturing audience attention.
- Making presentations more interactive and interesting.

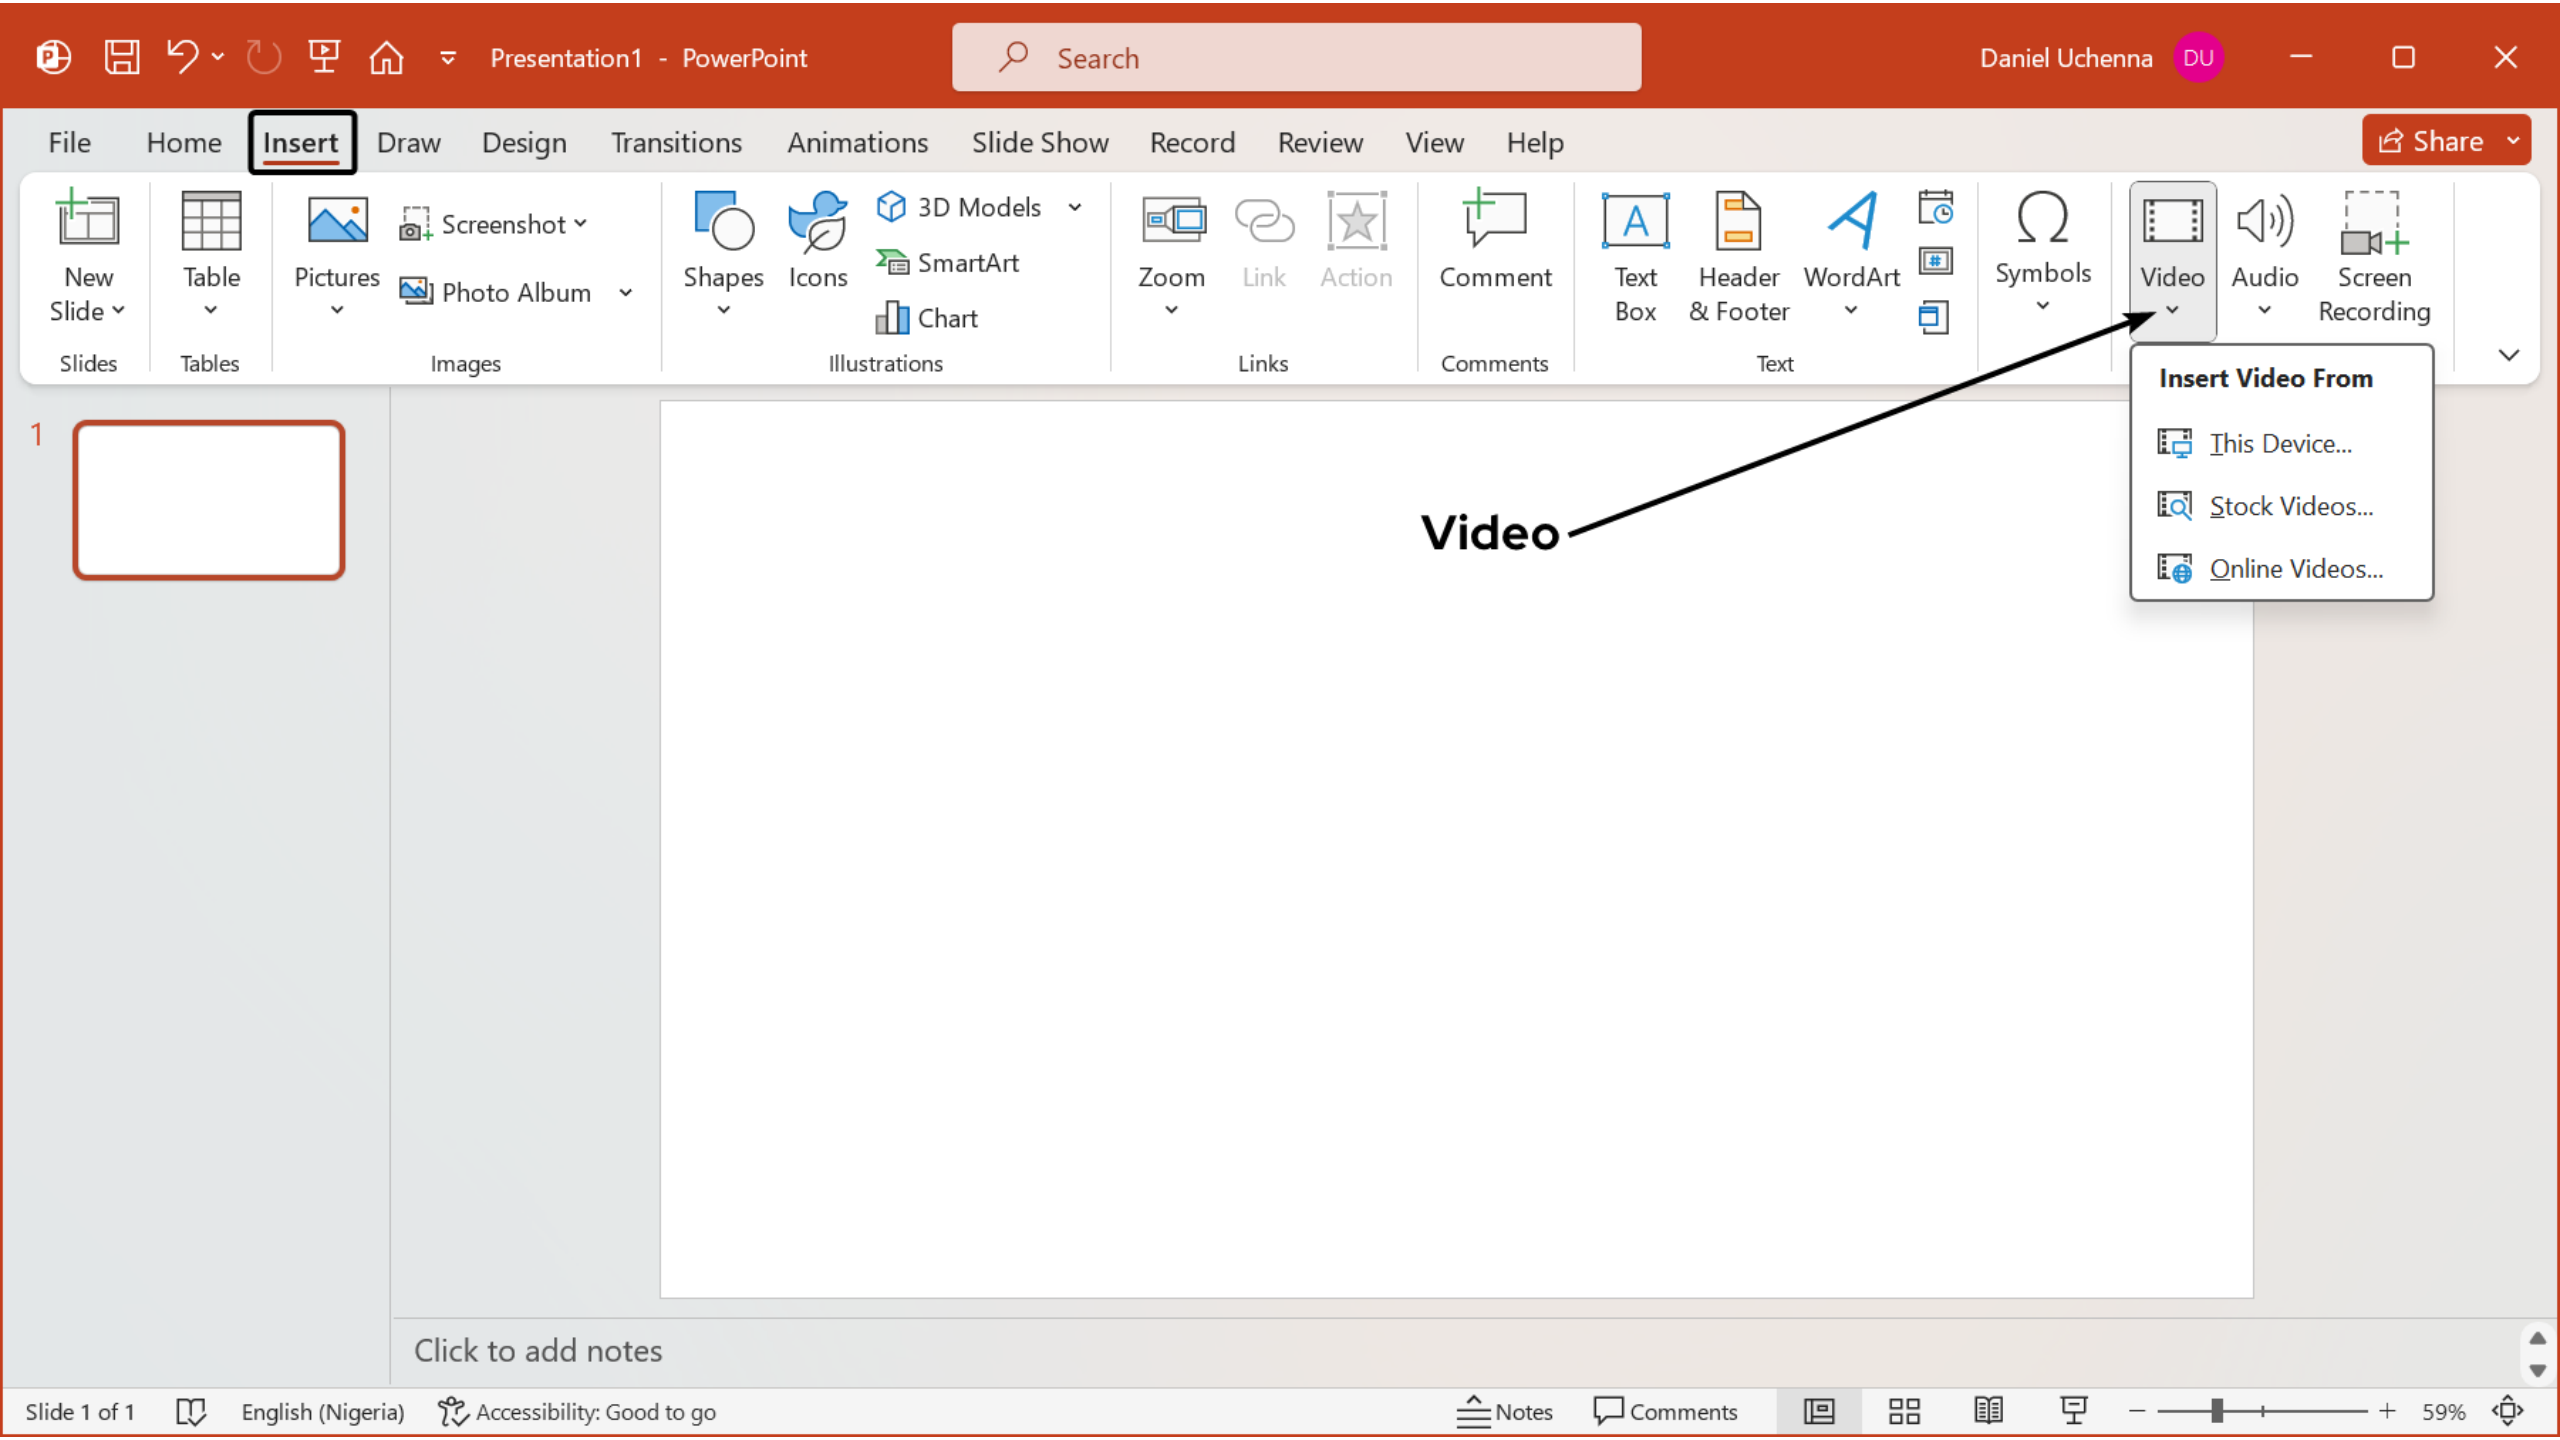

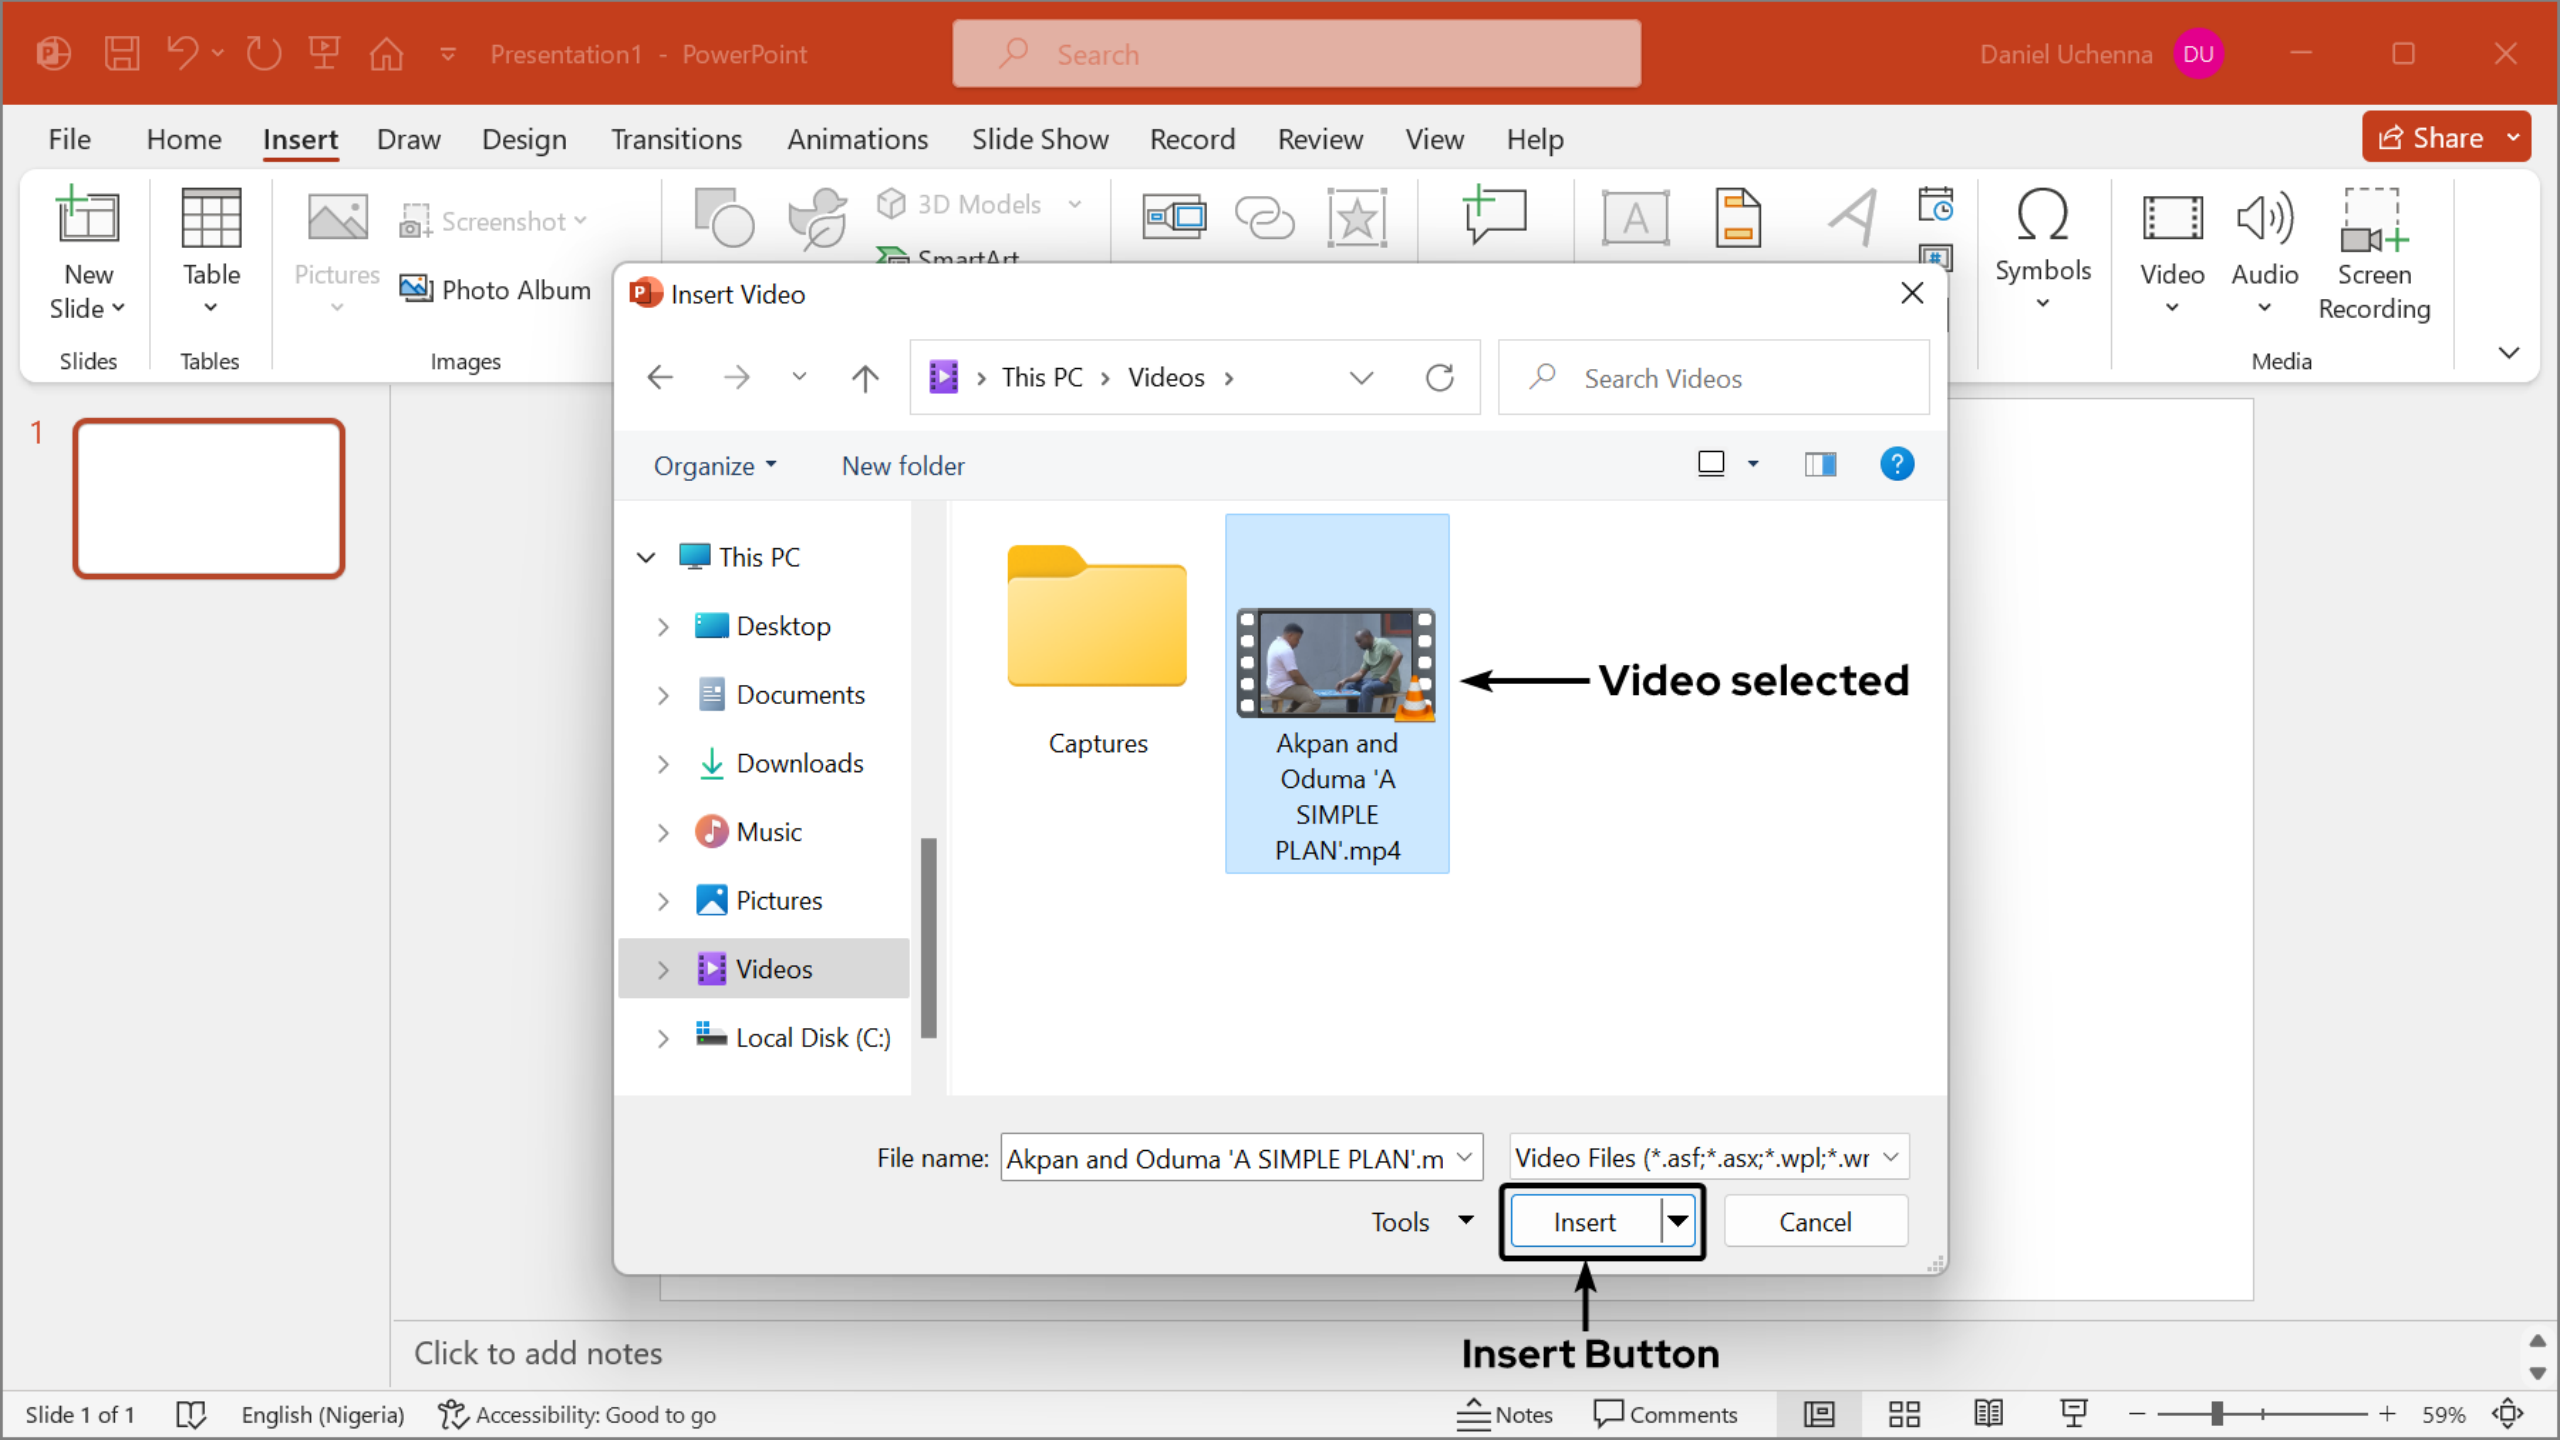

Steps for Inserting a Video in PowerPoint

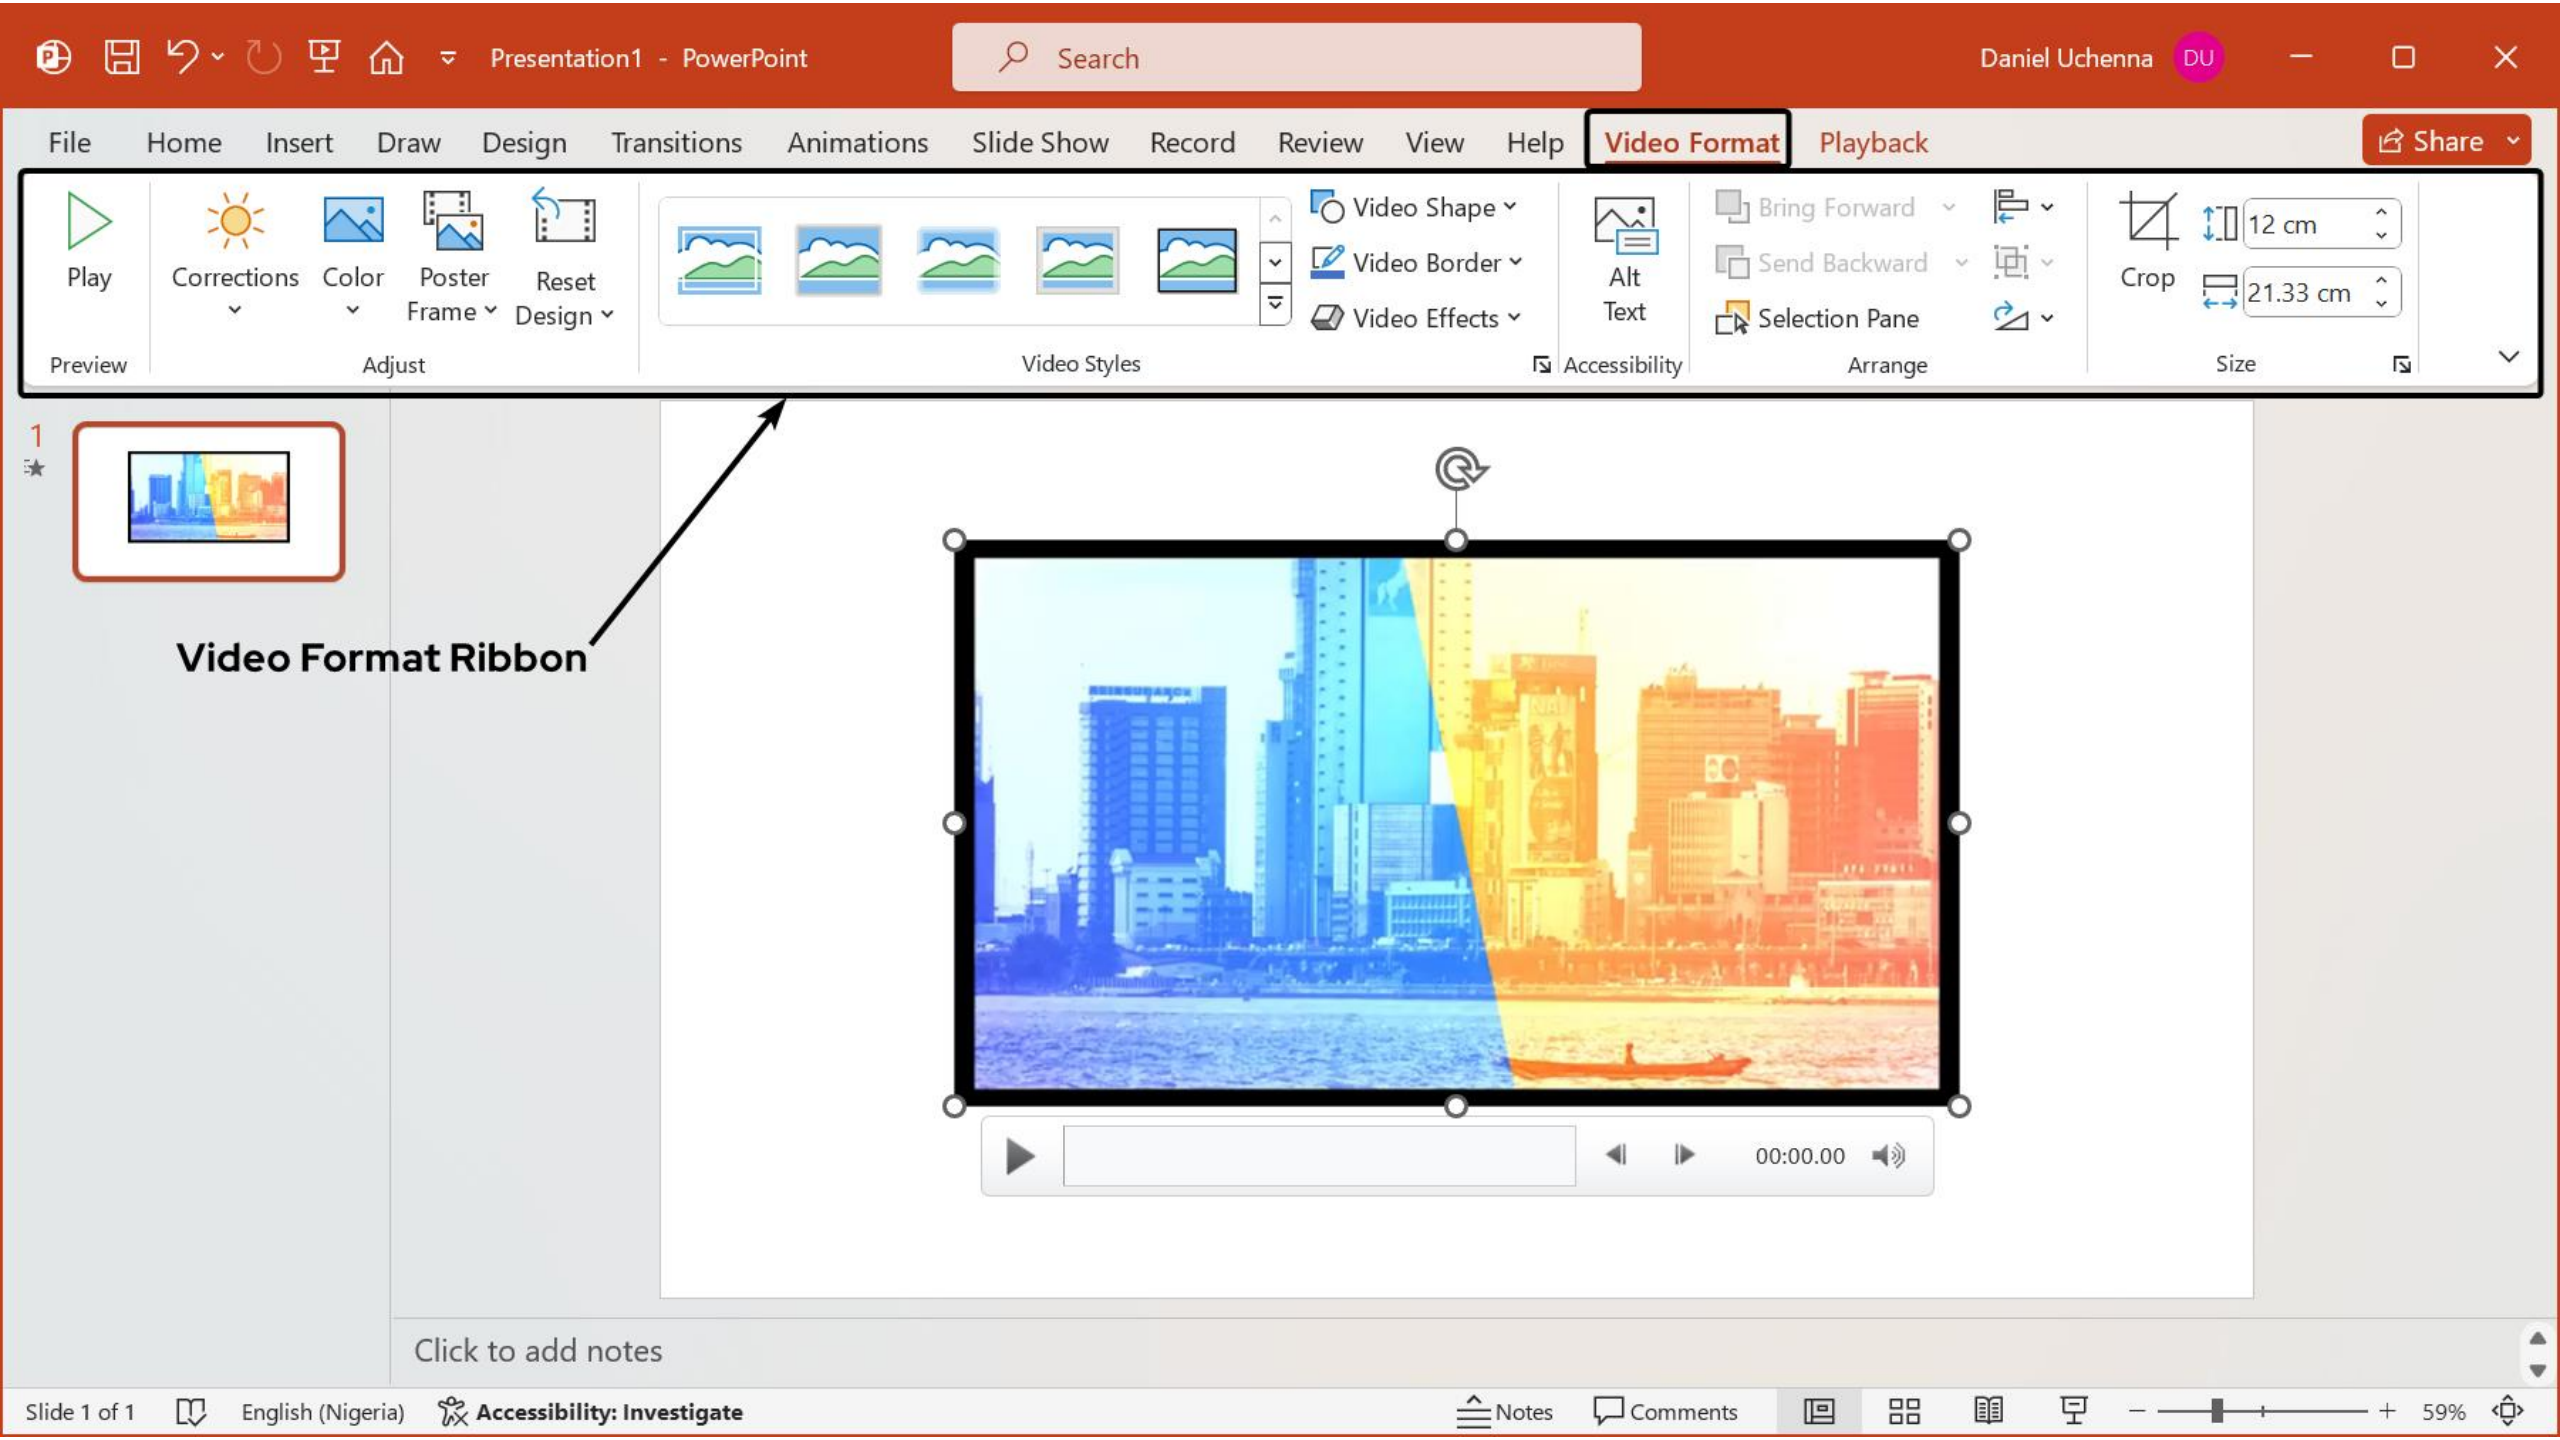

Method 1: Inserting a Video from a Computer

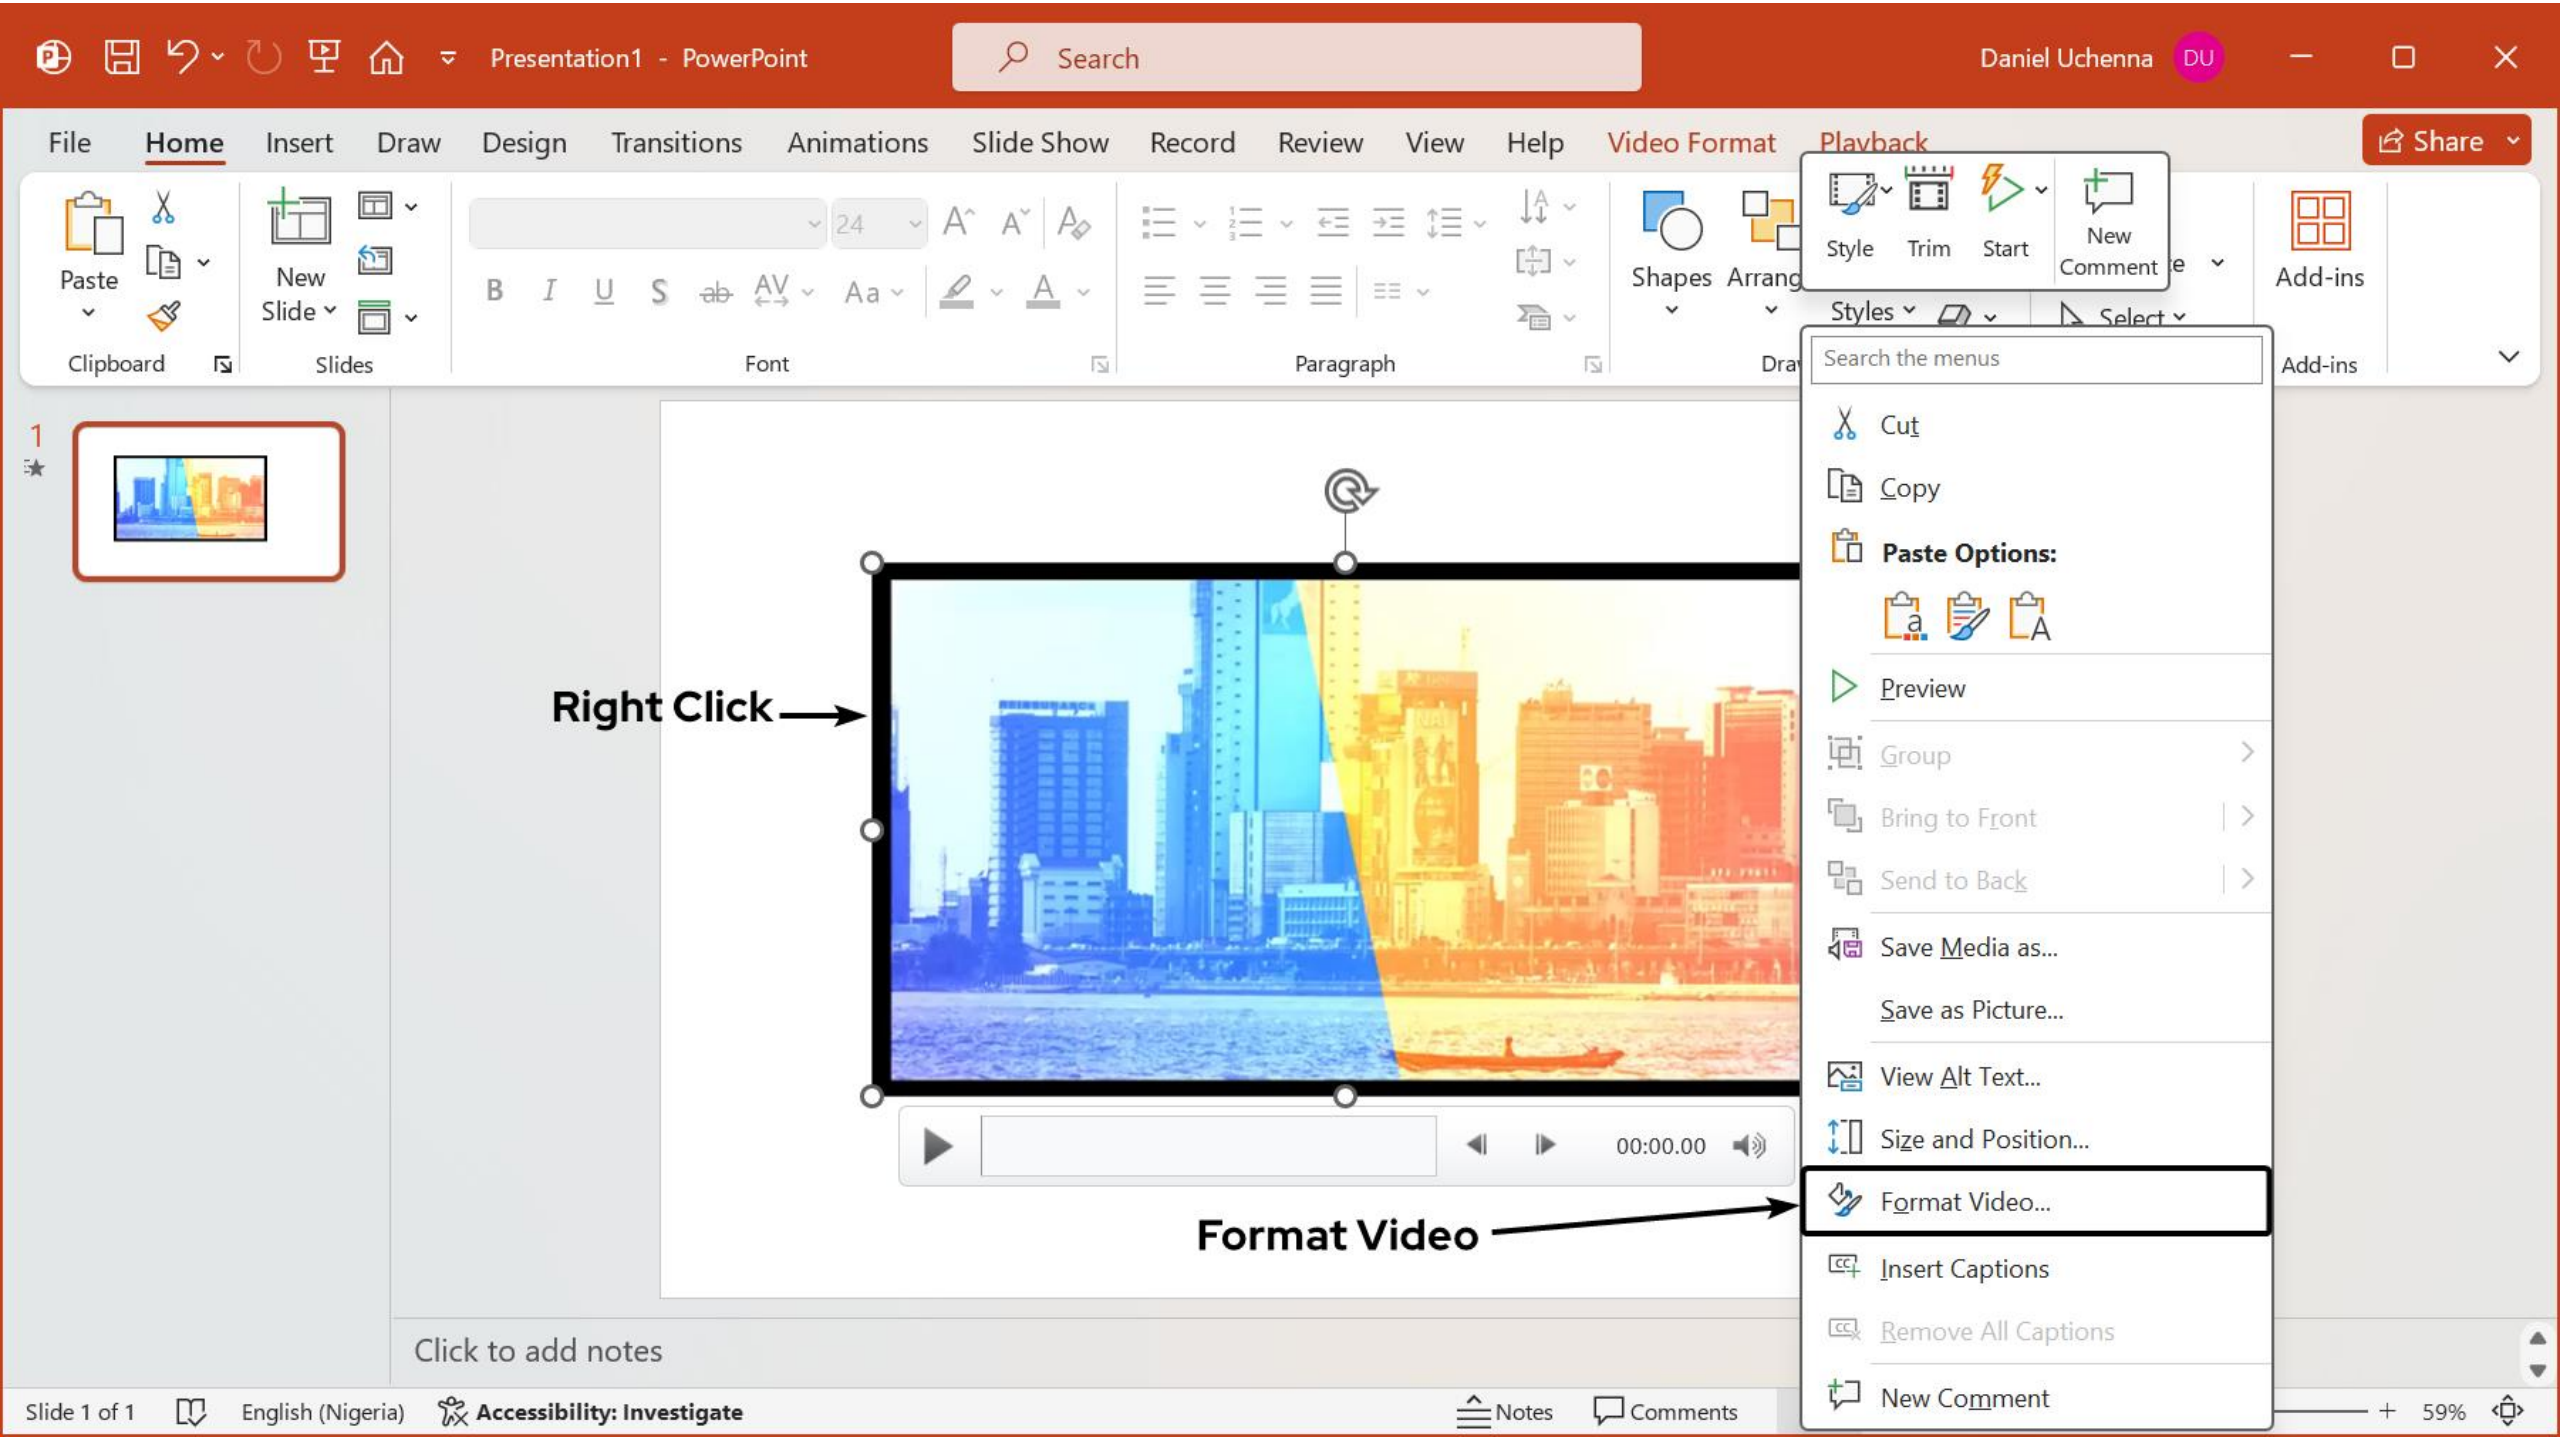

1. Open Microsoft PowerPoint.
2. Select the slide where you want to insert the video.
3. Click the Insert tab.
4. In the Media group, click Video.
5. Select This Device or Video on My PC.
6. Browse and select the video file.
7. Click Insert.
8. The video will appear on the slide.

Method 2: Inserting an Online Video (Internet Connection Required)

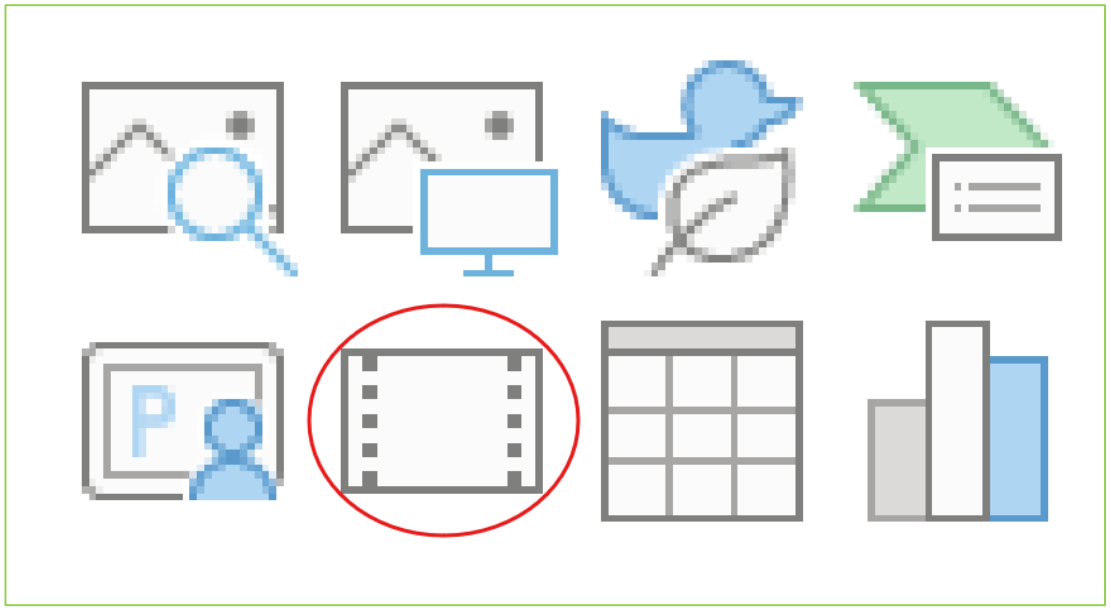

1. Click the Insert tab.
2. Select Video.
3. Choose Online Video.
4. Enter the video link or search for the video.
5. Click Insert.

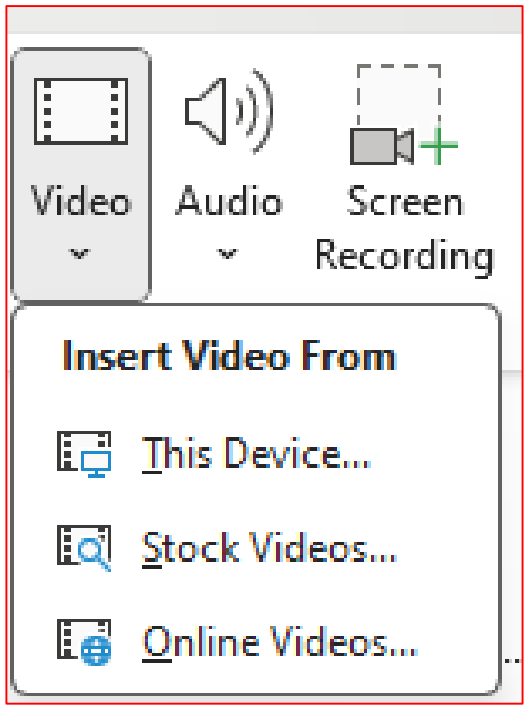

Editing a Video

After inserting the video, you can:

- Resize the video by dragging the corner handles.
- Move the video to a suitable position on the slide.
- Trim unwanted parts of the video.
- Add a video border or effects.
- Adjust the volume.

Playing a Video During a Presentation

1. Click the video.
2. Select the Playback tab.
3. Choose:

- **Automatically** – video starts when the slide appears.
- **On Click** – video starts when clicked.

Example of Video clip

Activity 10: Inserting Video

Situation

Your school is organizing a Health Awareness Day. The teacher has asked you to create a PowerPoint presentation that includes a short video showing the importance of handwashing.

Task

Using Microsoft PowerPoint:

1. Create a presentation titled "Importance of Handwashing".
2. Insert at least two slides with information.
3. Add a video showing proper handwashing techniques.
4. Position the video correctly on the slide.
5. Set the video to play when clicked.
6. Save and present your work to the class.

Questions [5 Marks]

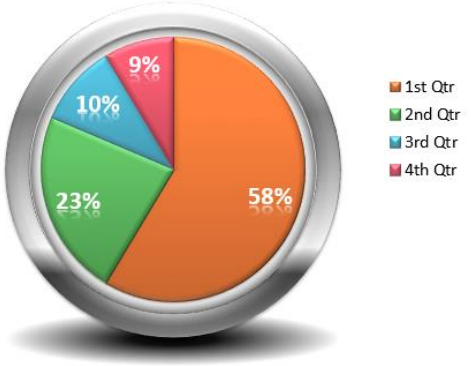

1. What is a video? [1]
2. Why are videos useful in presentations? [1]
3. Which tab is used to insert a video?[1]
4. What should you check before presenting a video? [1]
5. Give one benefit of using videos. [1]

Inserting Charts in a Presentation

- Charts are visual representations of data. They help presenters display information in a clear, organized, and easy-to-understand manner.
- Instead of presenting many numbers in a table, charts allow audiences to quickly identify patterns, trends, and comparisons.

What is a Chart?

A chart is a graphical representation of data that uses bars, lines, slices, or other symbols to display information visually.

Importance of Charts

Charts help to:

- Simplify complex information.
- Compare different sets of data.
- Show trends and patterns.
- Make presentations more attractive and informative.

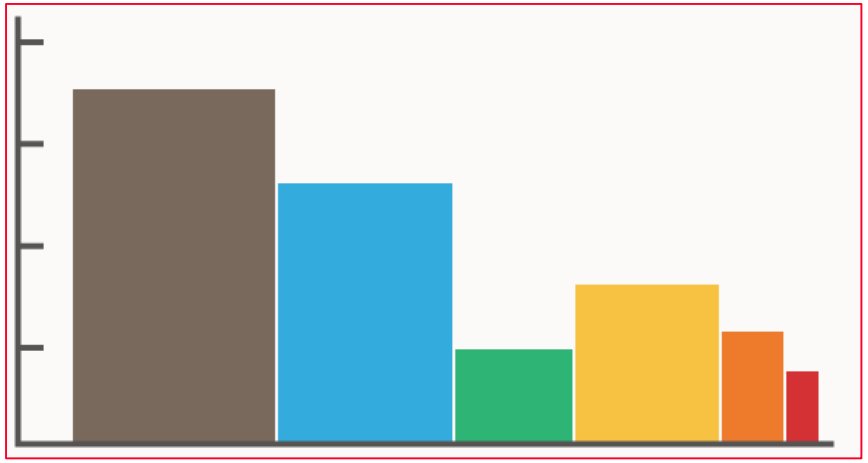

- Charts are used to present data visually in a presentation. They make information easier to understand and compare.
- Microsoft PowerPoint allows users to insert, edit, and format charts to improve communication and make presentations more effective.

Common Types of Charts

Column Chart

Uses vertical bars to compare data.

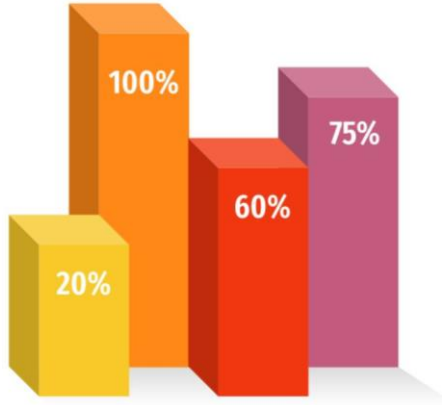

Example: Comparing the number of learners in different classes.

Bar Chart

Uses horizontal bars to compare values.

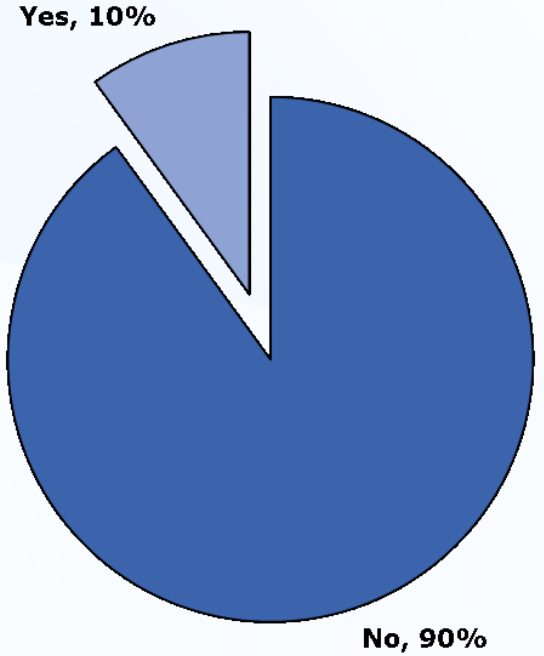

Example: Comparing sales of different products.

Pie Chart

Uses slices of a circle to show parts of a whole.

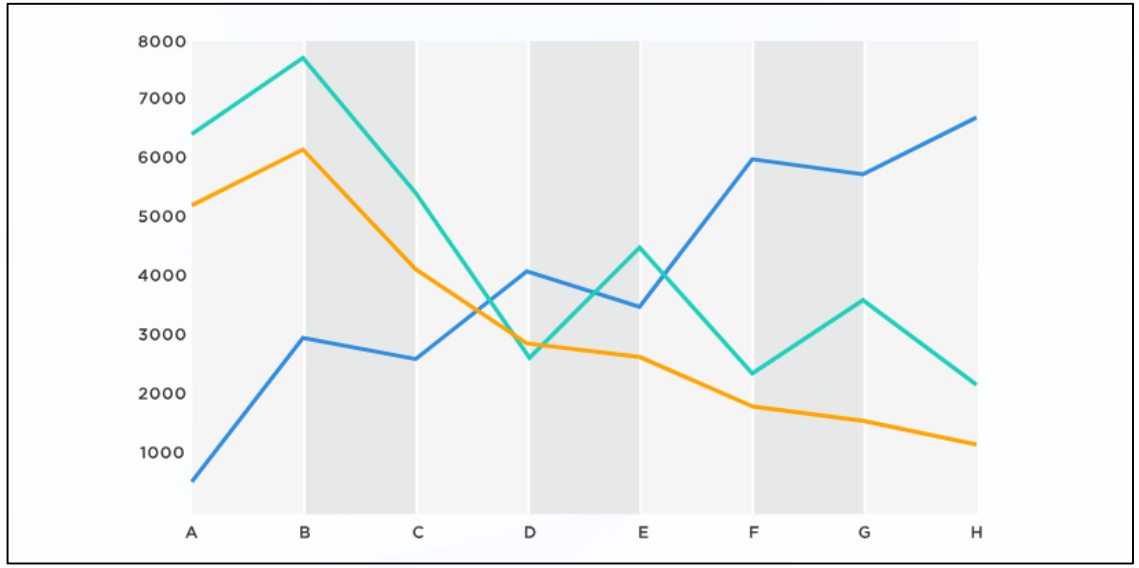

Example: Showing how a family budget is spent.

Line Chart

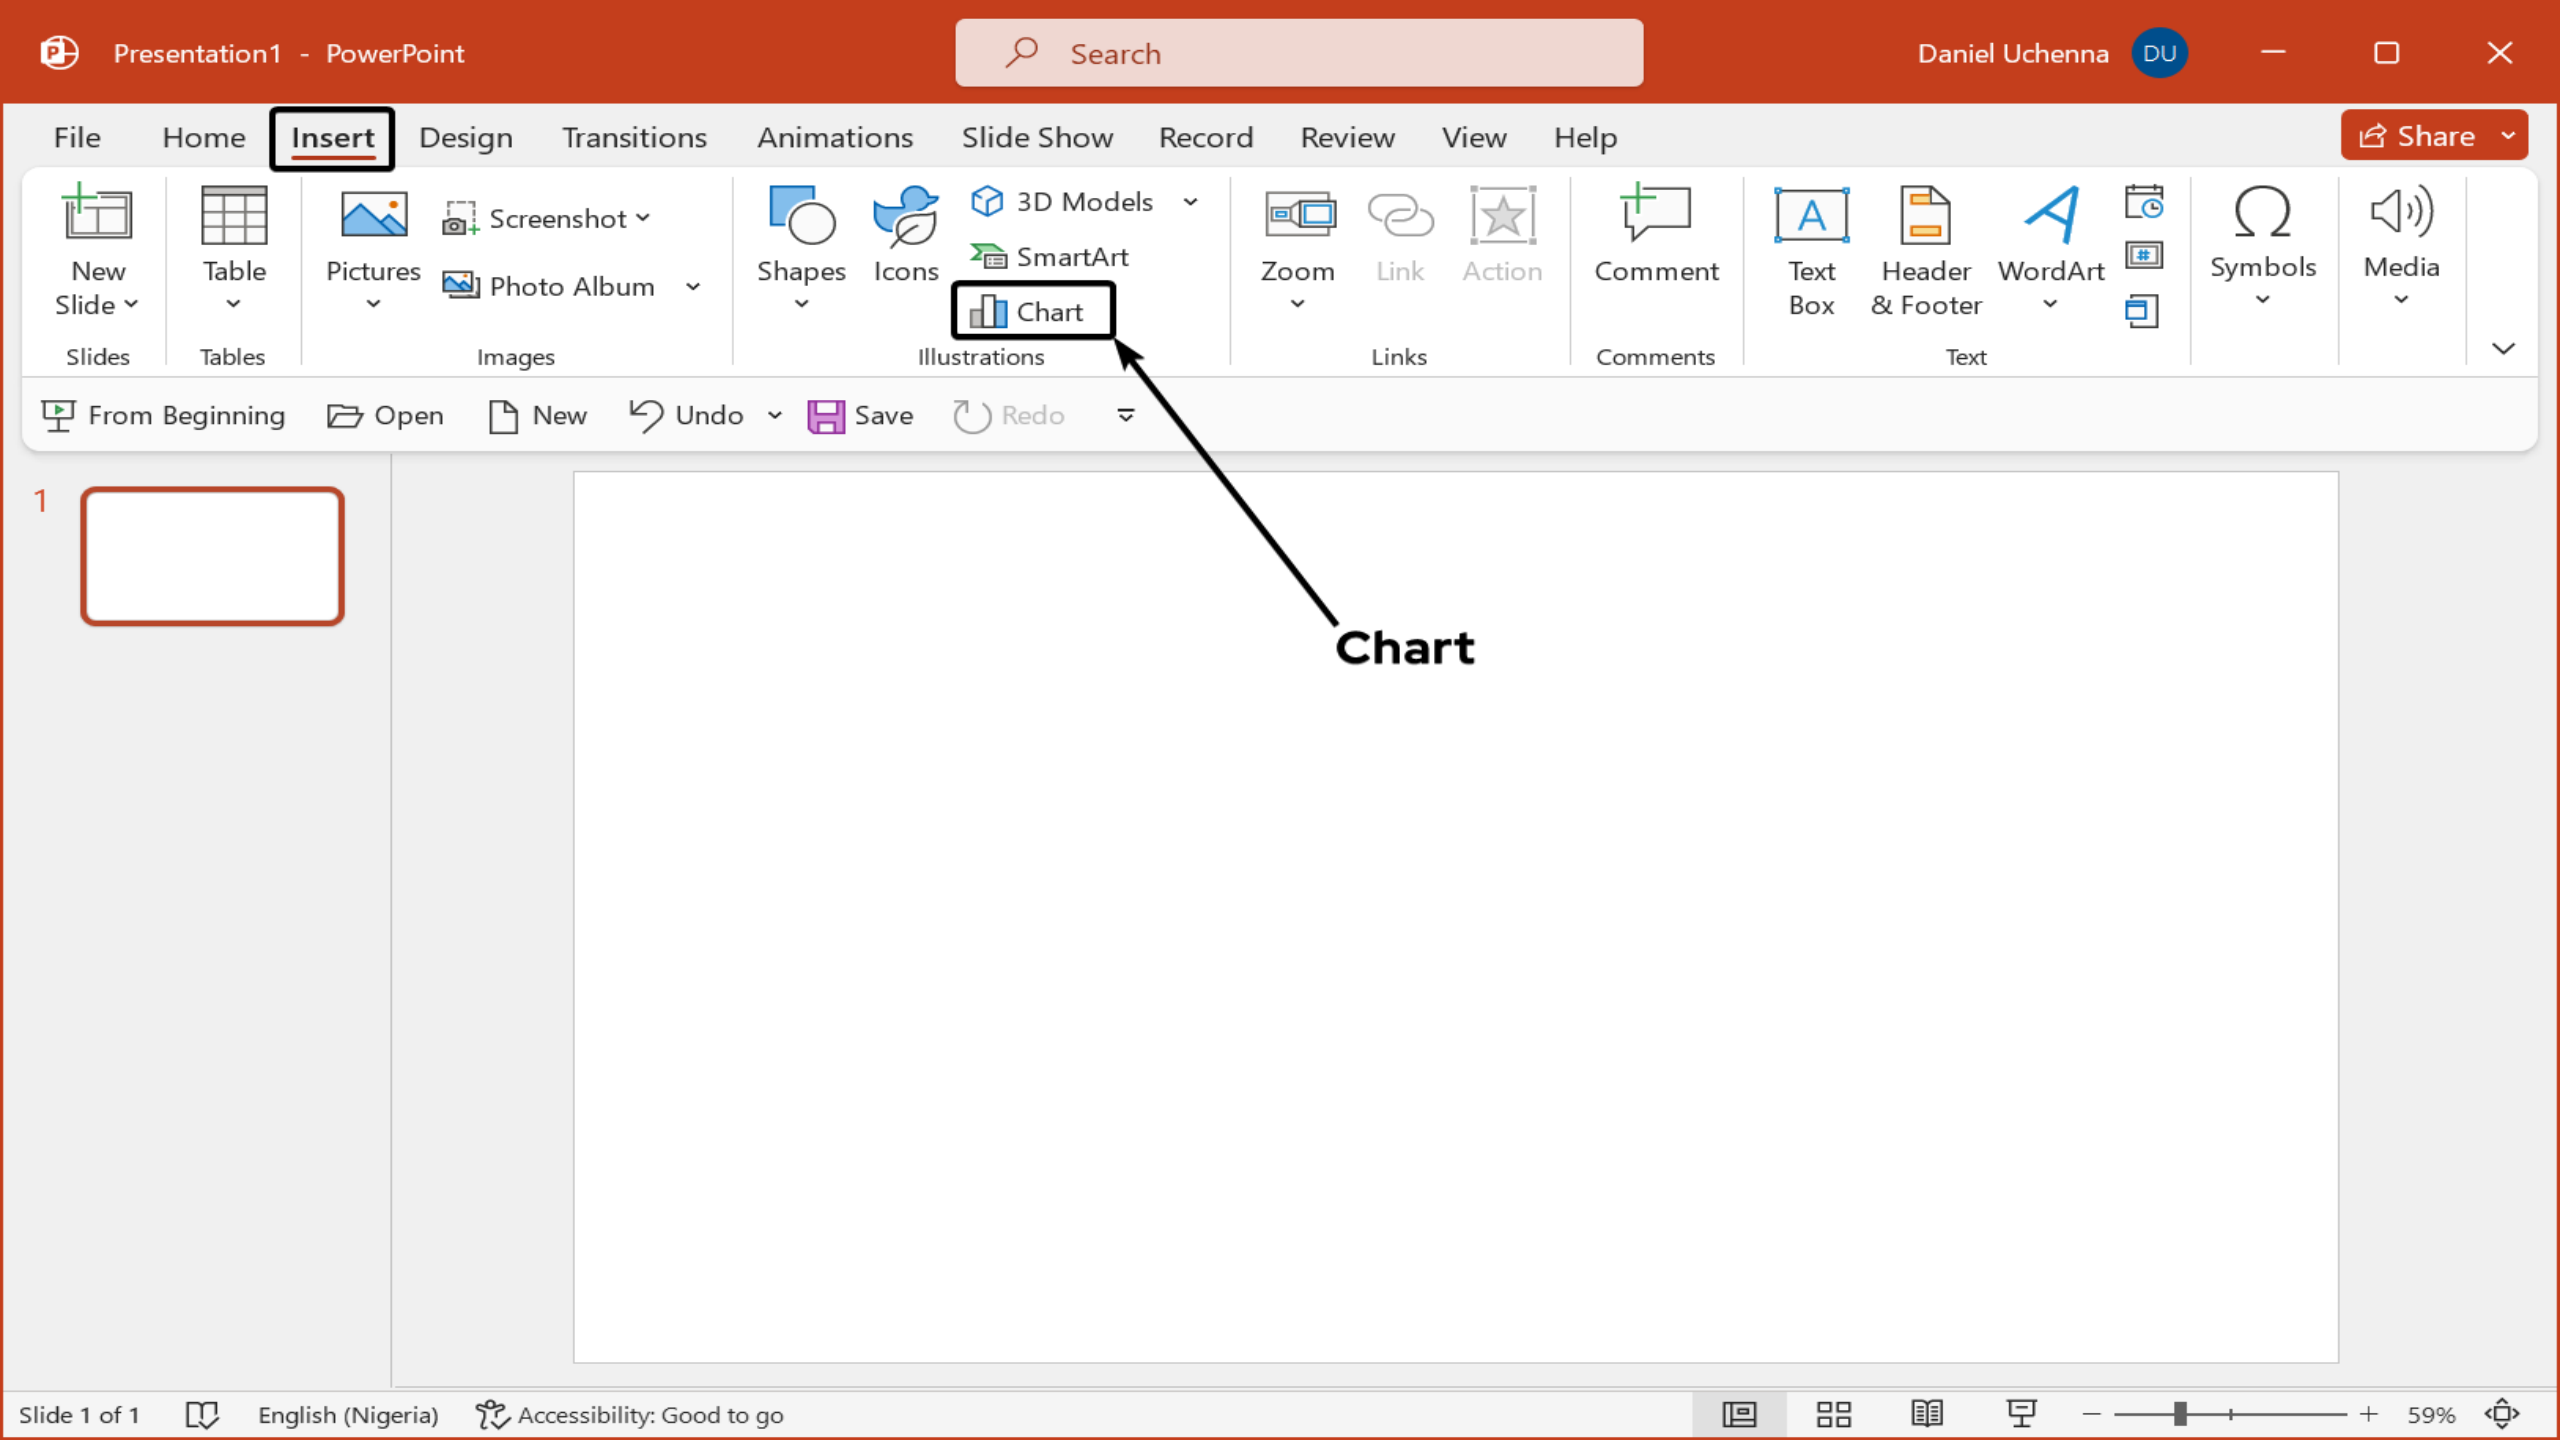

Uses lines to show changes over time.

Example: Recording rainfall over several months.

Steps for Inserting a Chart in PowerPoint

1. Open Microsoft PowerPoint.
2. Select the slide where the chart will be inserted.
3. Click the **Insert** tab.
4. Click **Chart** in the Illustrations group.
5. Select the desired chart type (Column, Bar, Pie, Line, etc.).
6. Click **OK**.
7. A spreadsheet window will appear.
8. Enter or replace the sample data with your own data.
9. Close the spreadsheet window.
10. The chart will automatically update on the slide.

Editing a Chart

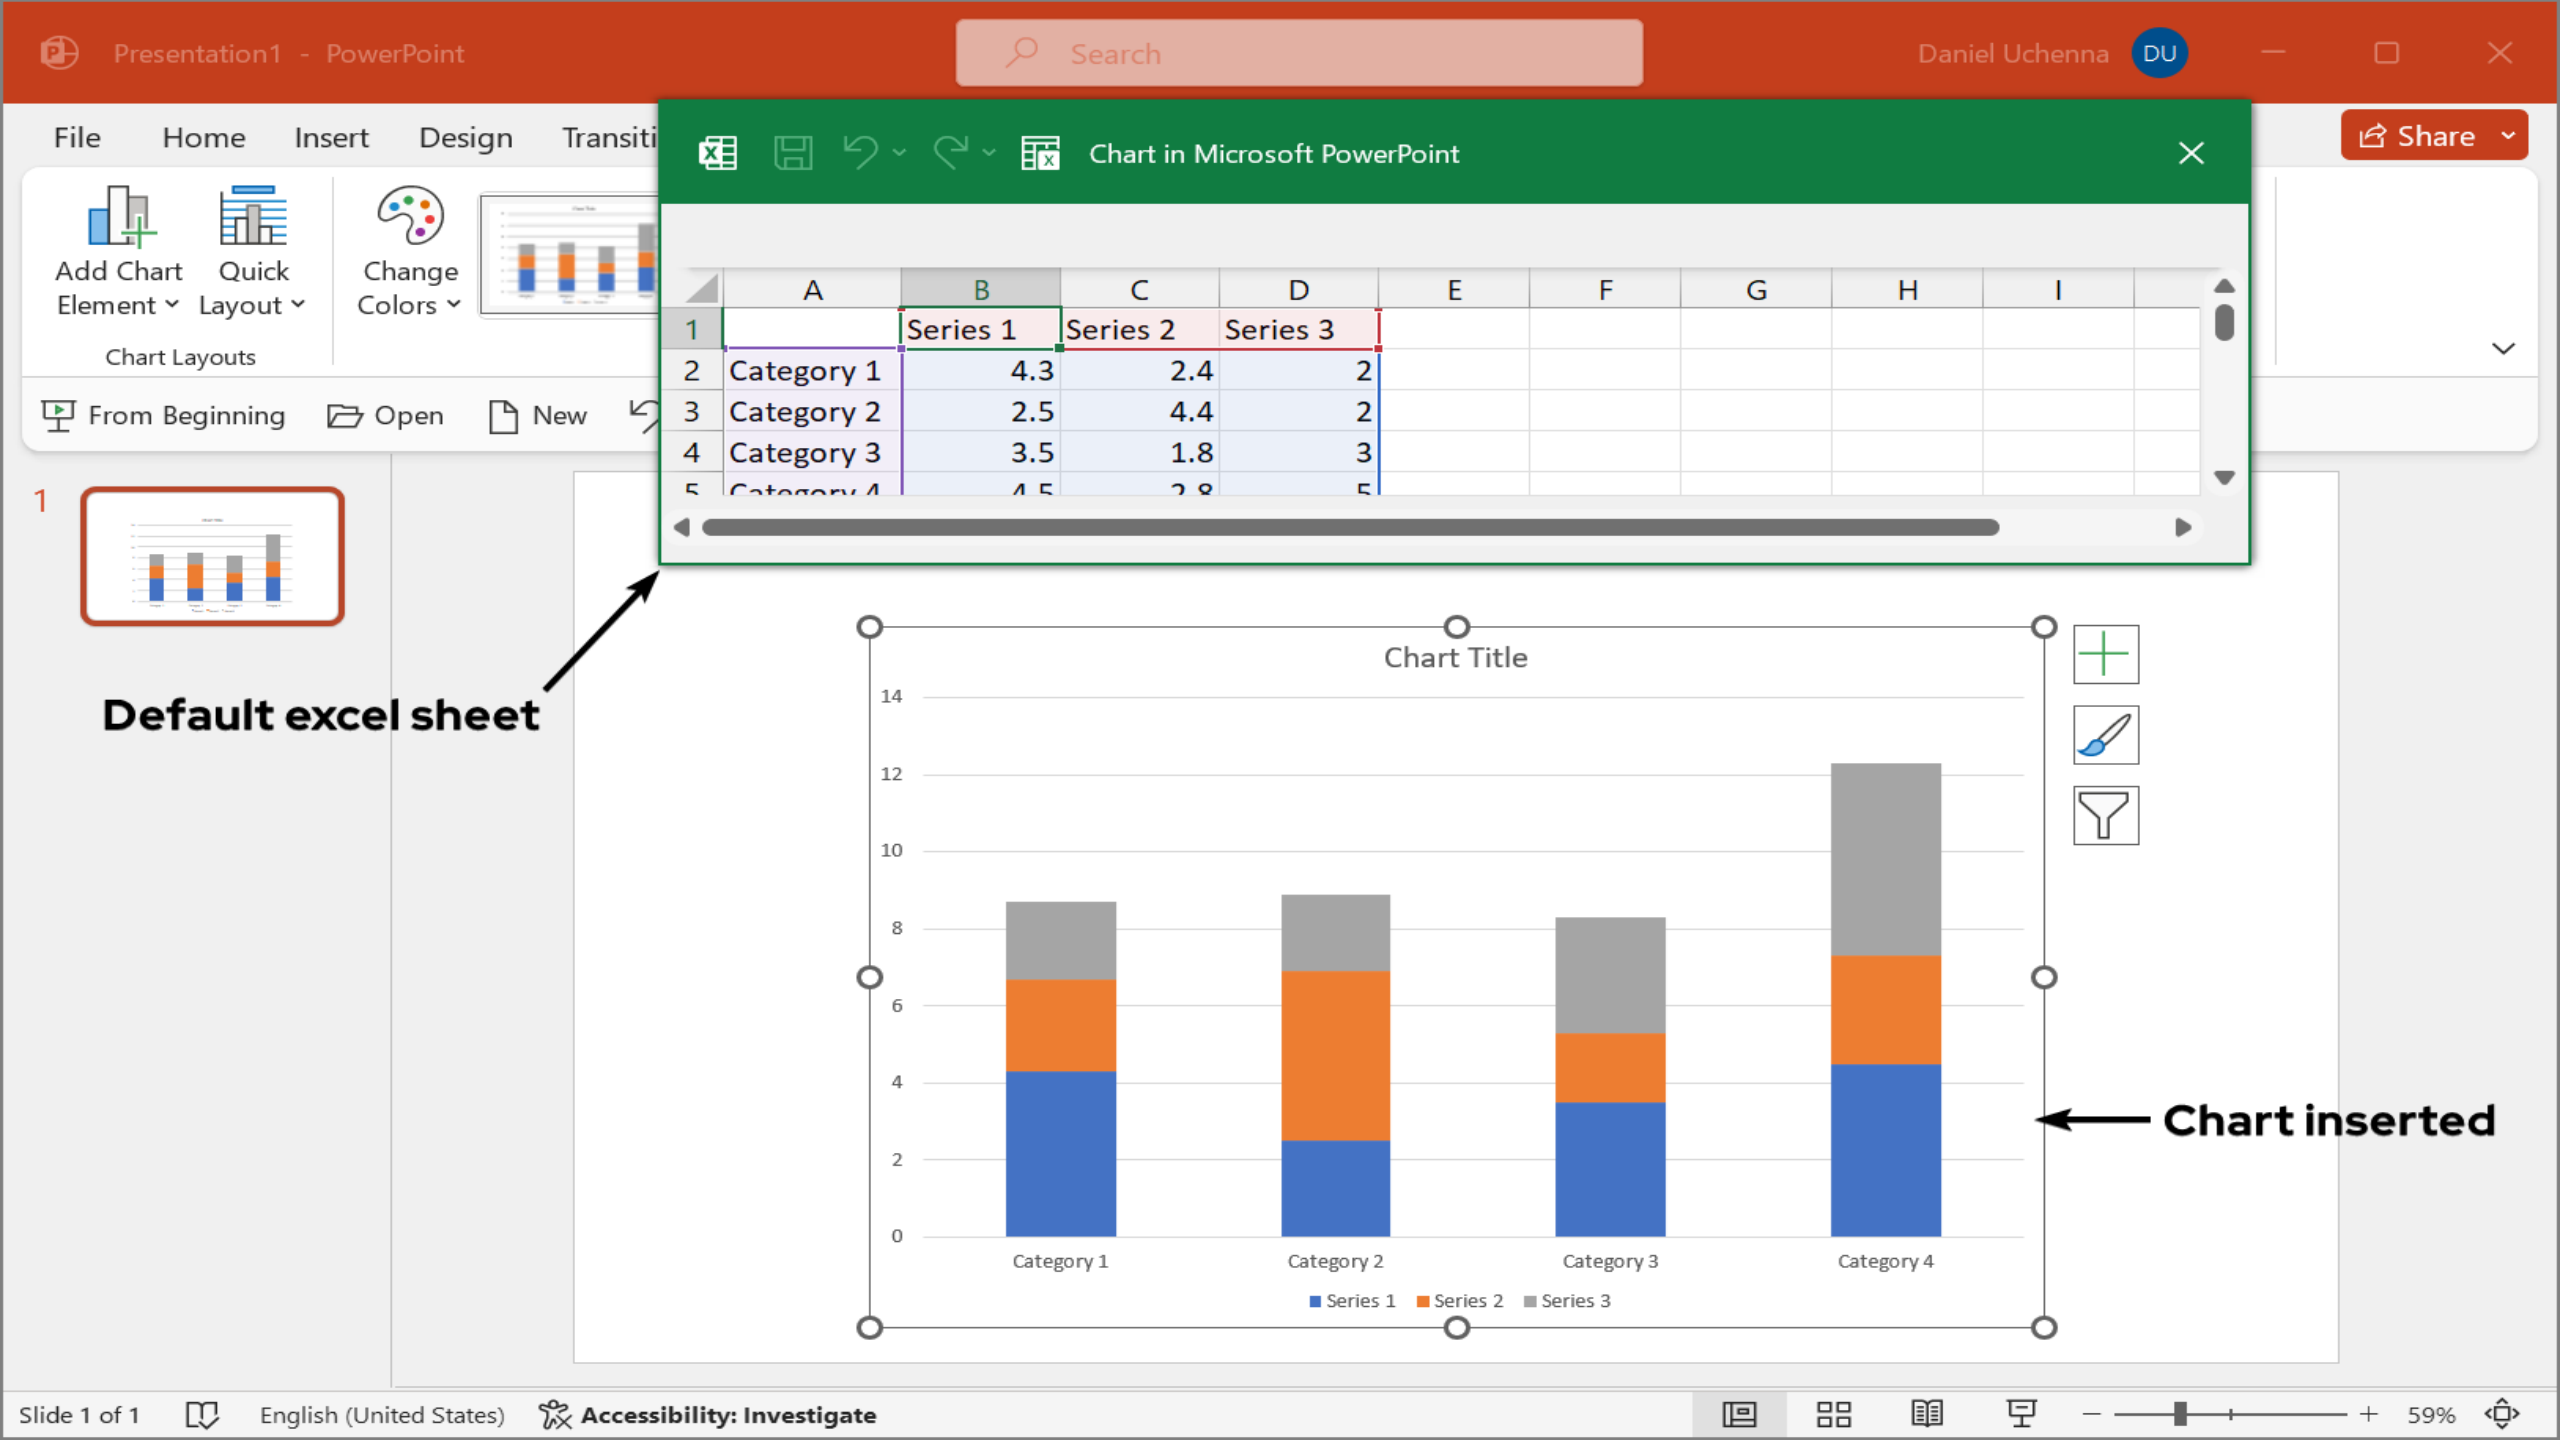

After inserting a chart, you can:

- Change the chart title.
- Edit data values.
- Change chart colours.
- Resize the chart.
- Move the chart to a suitable position on the slide.
- Change the chart type if necessary.

Guidelines for Using Charts

- Use clear and accurate data.
- Give the chart a meaningful title.
- Avoid overcrowding the chart with too much information.
- Select the most appropriate chart type.
- Ensure labels are easy to read.

Activity 11: Inserting Charts

Scenario

The School Agriculture Club collected information about crops grown by learners' families and wants to display the results clearly.

Activity

Create a chart using the following data:

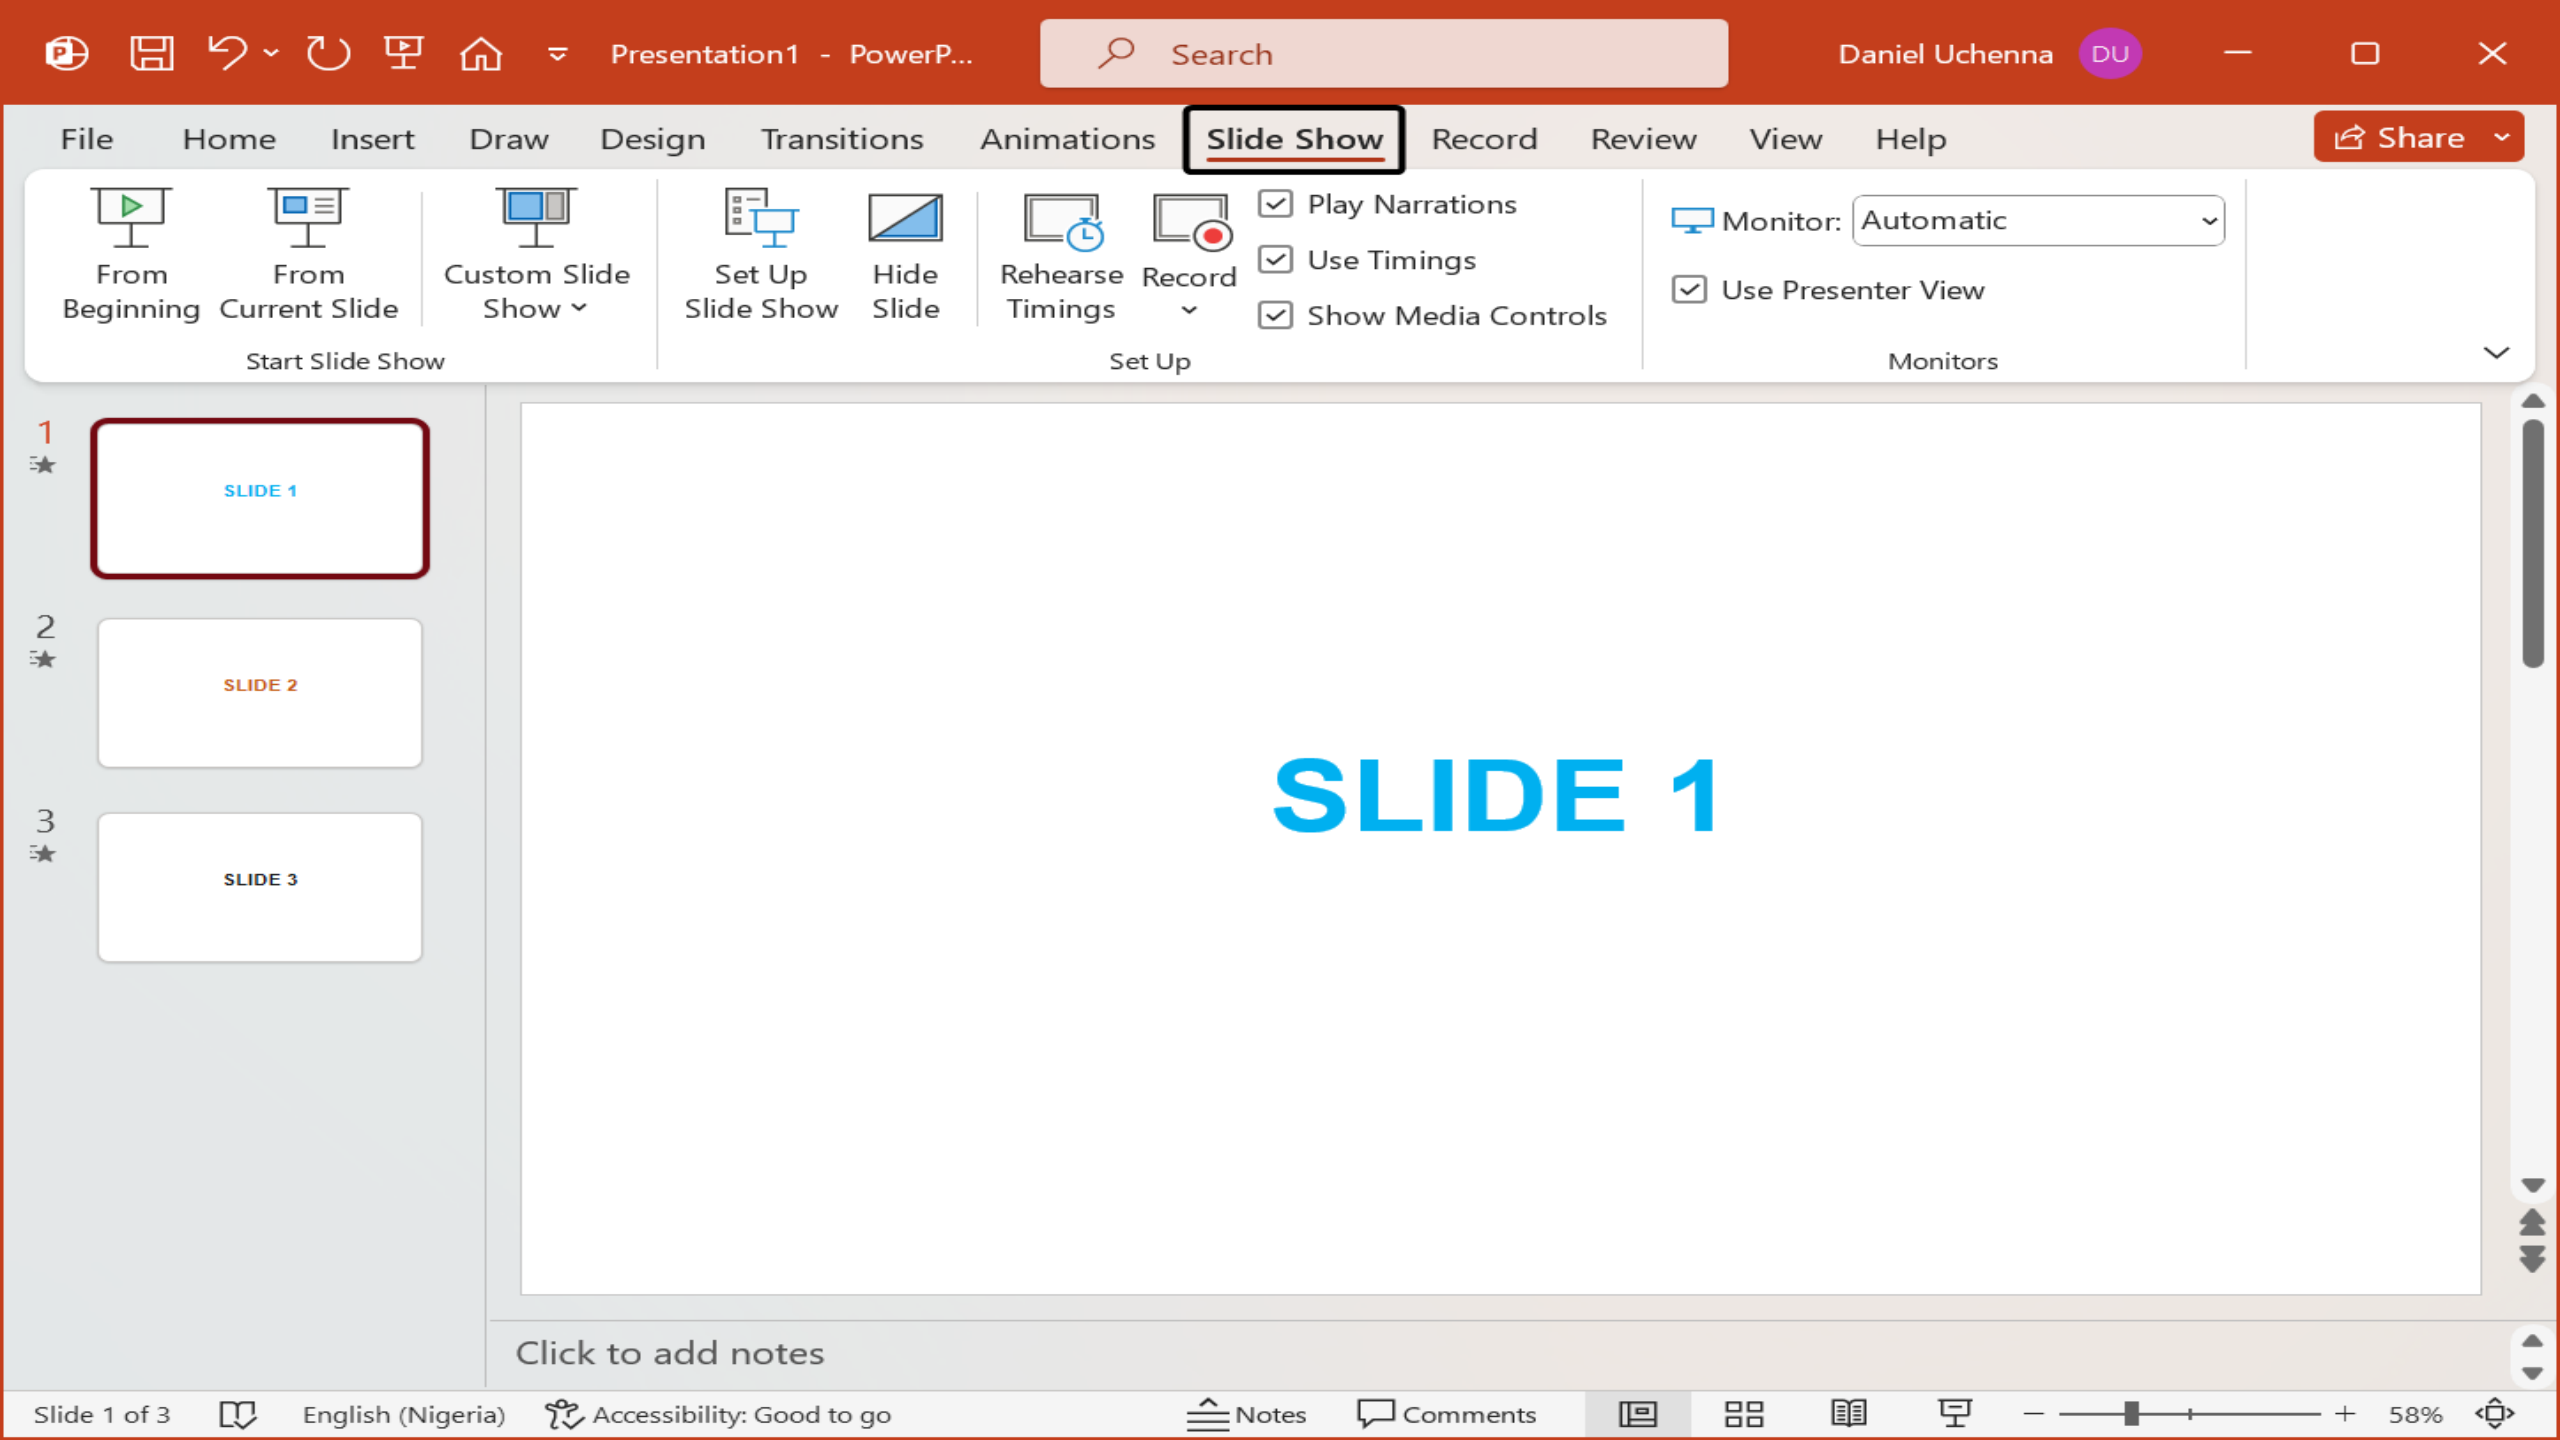

Crop	Number of Learners
Maize	20
Groundnuts	10
Beans	15
Soybeans	5

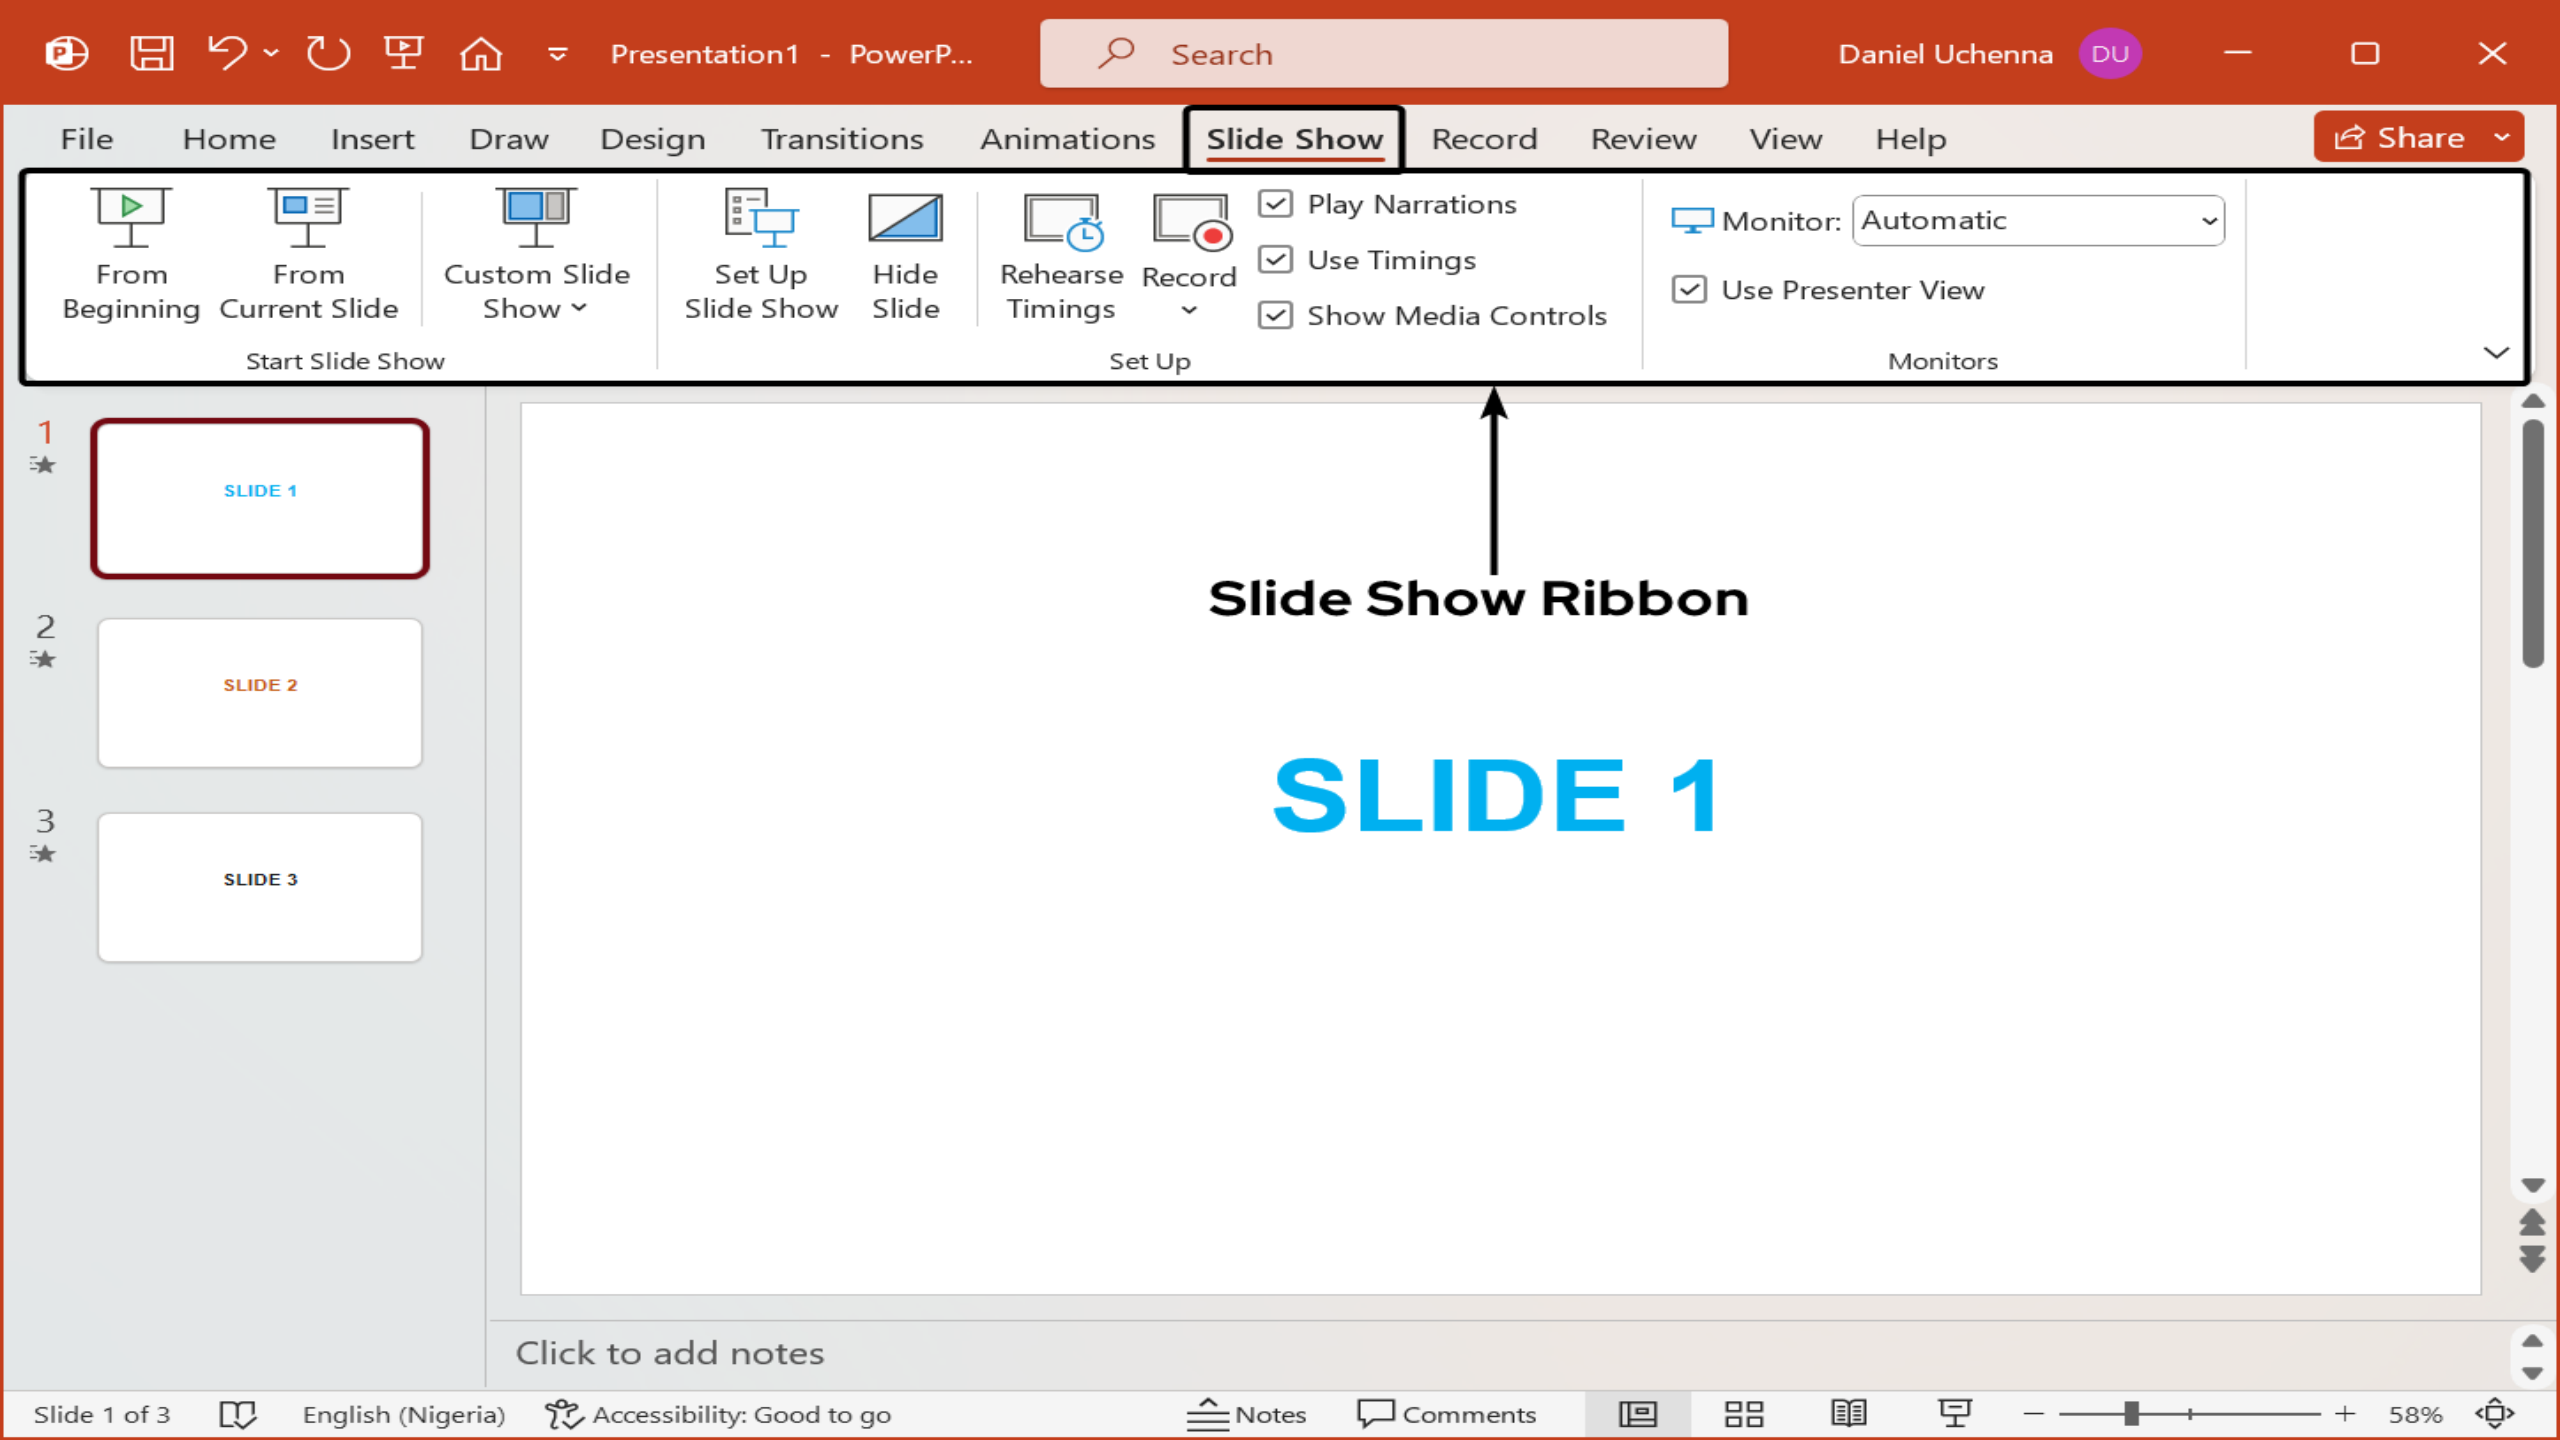

Questions [5 Marks]

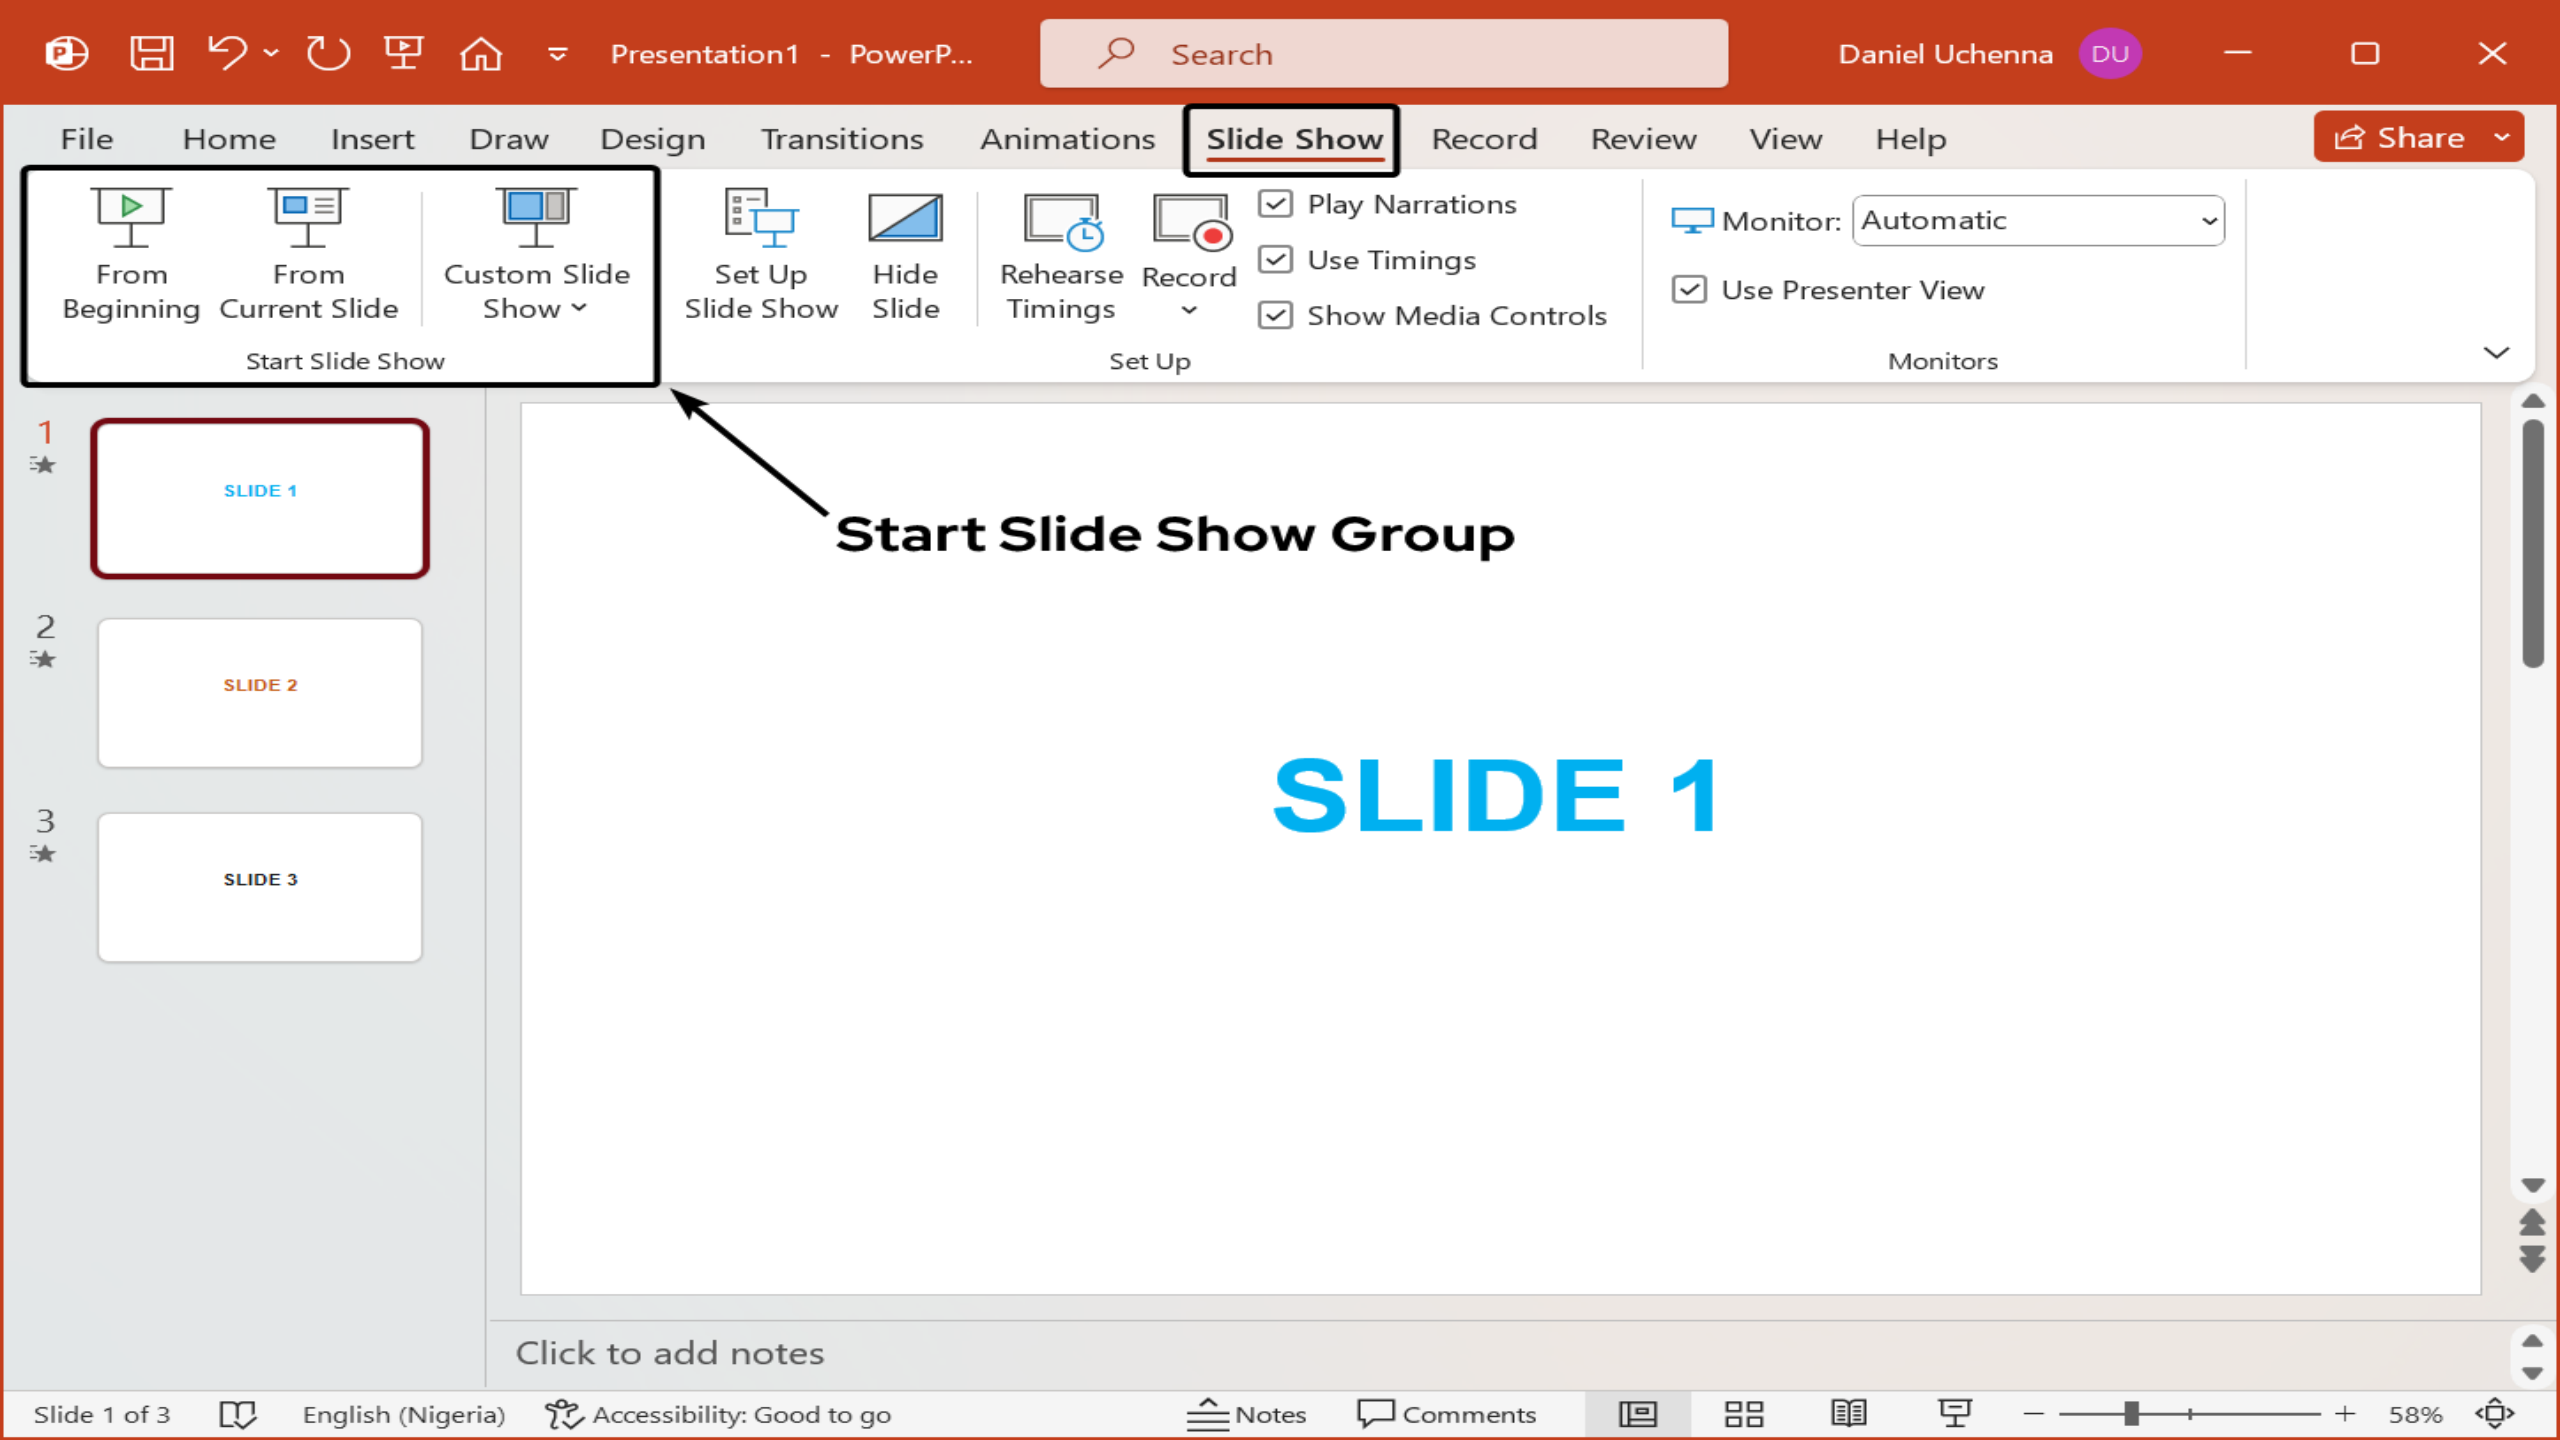

1. What is a chart? (1)
2. Why are charts used in presentations? (1)
3. Name two types of charts. (2)
4. Which tab is used to insert charts? (1)

Slide Show

- Slideshow is PowerPoint has to do with the finishing touch of your presentation and preview of it. This is where you can look at all what is contained in your slides with their different animations and transitions taking place.
- It is the process of displaying presentation slides one after another on a screen for an audience to view. It allows the presenter to communicate information effectively using text, images, audio, videos, charts, and animations.

Activity 12: Slide Show

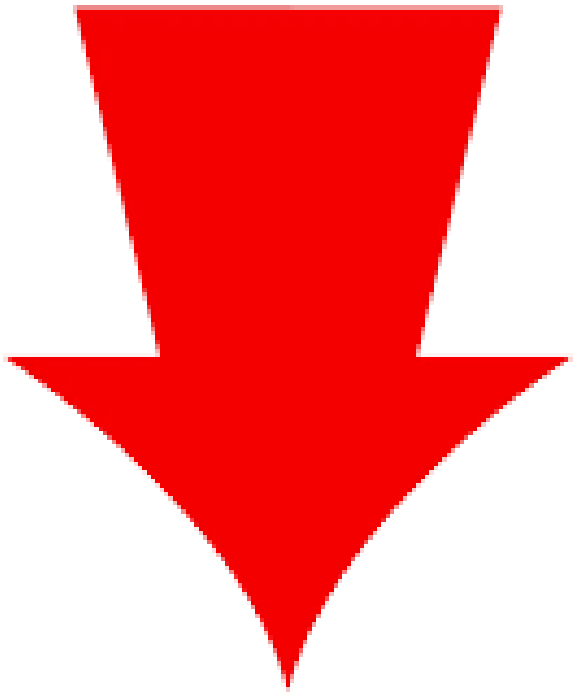

Scenario

After completing a presentation on "Road Safety," learners need to present it to the class.

Activity

- Start the slide show from the beginning.
- Move between slides.
- End the slide show.

End-of-Topic Assessment

End of topic Assessment

1. What is the importance of animations in a presentation?
2. What could happen if too many animations are used?
3. Why is it important to use readable font sizes and colours?
4. Why are charts useful in presentations?
5. Which editing features can improve the appearance of slides?
6. How can organized slides help the audience understand information better?
7. How do pictures and videos improve presentations?
8. Why should slides not contain too much text?
9. Which multimedia element was most useful in your presentation?
10. What challenges did you face while creating the slides?
11. How did transitions improve your presentation?

Creating a Simple Presentation

Scenario

Your school is organizing a "Clean School Campaign." You have been asked to create a short presentation to teach fellow learners about keeping the school environment clean.

Task

Create a 4–5 slide presentation that includes:

1. Title slide
2. Importance of cleanliness
3. Ways of keeping the school clean
4. Pictures related to cleanliness
5. Conclusion slide

Road Safety Awareness

Scenario

Your local Road Transport and Traffic Agency (RATSA) has launched a road safety campaign for young people. Your class must create a presentation to educate the community.

Task

Create slides showing:

- Road signs
- Safety rules for pedestrians
- Pictures and animations
- Transition effects
- A final message encouraging road safety

End of Term Results Presentation

Mr. Hakubeza wants to show Form 1 test performance using presentation software.

Task

Help the teacher by creating slides that contain:

- A title slide
- A bar chart showing learner performance
- Transitions between slides
- Edited and well-organized text

Questions

1. Why are charts useful in presentations?
2. Which editing features can improve the appearance of slides?
3. How can organized slides help the audience understand information better?

Tourism in Zambia

The Ministry of Tourism wants young learners to promote tourist attractions in Zambia.

Your group has been asked to prepare a classroom presentation.

Task

Prepare a 5-slide presentation about tourist attractions in Zambia.

Include:

- Pictures of tourist sites
- A chart showing tourist visits
- Slide transitions and animations
- A short video or audio clip

Group Activity: Presentation Challenge

In groups of 4–5 learners:

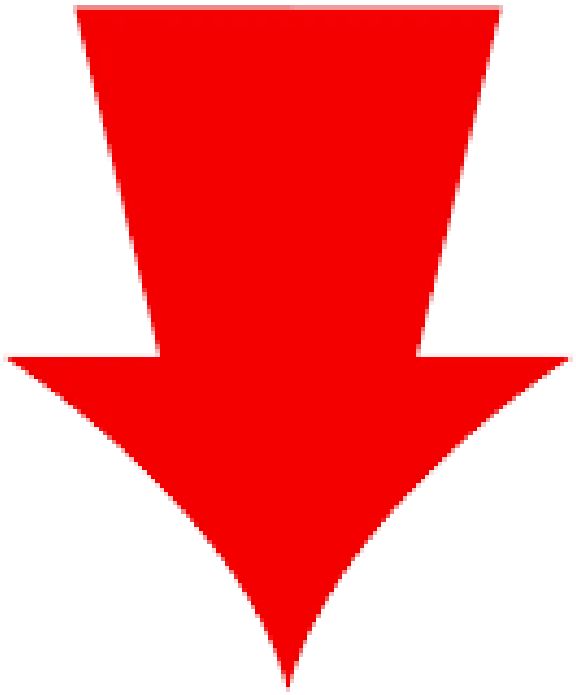

Create a presentation on one of the following topics:

- Healthy Living
- Road Safety
- Effects of Littering
- Importance of Education

The presentation must include:

- Minimum 5 slides
- Pictures
- Slide transitions
- Text animations
- One chart or graph

End-of-Topic Project

Project Title: Creating an Educational Presentation

Scenario

Your school is organizing a Career and Skills Exhibition Day. Learners have been asked to create a PowerPoint presentation on a topic of their choice to educate fellow learners and visitors. Examples of topics include:

- Cyberbullying
- Road Safety
- Healthy Living
- Career Choices
- Keeping our School Clean
- Digital Literacy
- Tourist Attractions in Zambia

Project Task

Create a PowerPoint presentation consisting of 5–7 slides that includes the following:

Slide 1: Title Slide

- Topic title
- Learner's name
- Form level and class

Slide 2–5: Content Slides

Include information about your chosen topic using:

- Text
- Pictures
- Tables
- Charts

Project Task…cont

Multimedia Slide

Include at least one:

- Audio file
- Video file

Final Slide

- Summary or conclusion
- Thank you message

NOTE

Your presentation should be informative, attractive, and demonstrate the skills learned during the topic on Presentations.

Project Requirements

The presentation must demonstrate the following skills:

Skill	Requirement
Presentation Window	Correct use of PowerPoint features
Saving Presentation	Save work with an appropriate file name
Formatting Text	Use different fonts, colours, sizes, and styles
Editing Text	Correct spelling and grammar mistakes
Pictures	Insert at least 2 pictures
Tables	Insert at least 1 table
Charts	Insert at least 1 chart
Audio/Video	Insert at least 1 multimedia file
Animations	Apply animations to important content
Transitions	Apply transitions between slides
Slide Show	Present the completed work
